Reports from several places indicate the working model Sputnik PS2 satellite launched Monday, November 3, from the Mir space station is beeping away on 145.82 MHz. The one-third scale Sputnik model was built by students in Russia and France to commemorate the 40th anniversary of the original Sputnik 1 satellite. Sputnik 1, launched by the

Soviet Union in 1957, was the first artificial Earth satellite. The original
Sputnik 1 transmitted a beacon on approximately 20 MHz.

The Sputnik model was launched by hand from Mir during a space walk by Cosmonauts Pavel Vinogradov and Anatoly Solovyev, who turned on the transmitter and checked out reception aboard Mir before launch with help from US astronaut David Wolf, KC5VPF. The beacon is audible in either FM or SSB mode. The beacon transmitter runs approximately 250 mW.

Several stations have reported hearing Sputnik PS2 on the nominal frequency of 145.82 MHz, Doppler shift giving slighty higher frequency on acquisition of signal, and slightly lower at loss of signal. The signal is reportedly clearly audible even on a hand-held.

On Reunion Island, a great cheer went up as hams, students and teachers gathered to listen to the Sputnik model as it passed overhead on its initial orbit and heard the beacon signal from space for the first time. Students from the FR5KJ radio club at Jules Reydellet College in St Denis, Reunion Island, and at the Polytechnic Laboratory of Nalchik Kabardine in Russia cooperated in building the mini-Sputnik. The Russian students built the satellite body, while the French students fabricated the transmitter inside. Two working models of the Sputnik were assembled and transported to Mir, but only one was launched.

The 500 mm antennas are circularly polarized. Reception reports go to FR5KJ, the club station at College Reydellet. Miles Mann, WF1F, says reception reports also may be sent to Sergei Sambourov, PO Box 73, Kaliningrad-10 City, Moscow Area, 14070, Russia. Include an SASE and one IRC for a certificate.

The frequency of the beacon audio indicates the satellite's internal temperature. The scale runs from 1361 Hz at 50 degrees C to 541 Hz at minus 40 degrees C.

CLUB NEWS

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

THE NEXT MEETING OF THE LIVERPOOL & DISTRICT AMATEUR
RADIO CLUB WILL BE HELD ON WEDNESDAY, 12TH NOVEMBER, 1997.
THE MEETING ON WEDNESDAY WILL BE SERVICING NIGHT SO
MEMBERS AND GUESTS WHO WOULD LIKE THEIR LOVED AND PRE-
LOVED EQUIPMENT CHECKED OVER AND SIMPLE REPAIRS MADE
SHOULD BRING THE ITEMS TO THE MEETING.

BUSINESS ON THE NIGHT WILL INCLUDE A PROGRESS REPORT ON
THE CLUB REPEATER AND SUGGESTIONS FOR MATTERS TO BE
DISCUSSED AT THE NEXT CONFERENCE OF CLUBS.

THE CLUB MEETS AT THE SCOUT CAMP, CAMBRIDGE AVENUE,
GLENFIELD. THE MEETING WILL START PROMPTLY AT 8.00 PM.
VISITORS ARE ALWAYS WELCOME TO THE CLUB'S MEETINGS.

-- BOB VK2TG, PUBLICITY OFFICER

GLADESVILLE MONTHLY MEETING

The november meeting of the Gladesville Amateur Radio Club
Incorporated will be held tomorrow night Monday the 10 th at 7.30 pm.
The venue as usual will be at Number One, Birdwood Avenue, Lane
Cove. Parking is available opposite in the public car park.

If any listener is thinking about obtaining an Amateur Radio license and
needs to do some theory study - might consider checking out the
Gladesville video tapes. For further information call the Club telephone
[02] 9427 0530 [repeat] or write to P.O. Box 48, Gladesville NSW 2 111.
A reminder about the Test Transmissions from VK2TVG which may be
viewed on Channel 35 - VK2RTV - Wednesday, Friday and Sunday
evenings with the addition of 444 Megahertz on Wednesday and Sunday.
A portion of a theory lecture is included in the Wednesday and Friday
transmisson.

-- Keith VK2ZZO - President / TV Co-ordinator

VHF DX GROUP

THE VJF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF
AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE
NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS
ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE HELD ON TUESDAY 18
NOVEMBER AT AMATEUR RADIO HOUSE, PARRAMATTA.

EVERY SUNDAY THE GROUP HOLDS AN INFORMAL NET ON TWO
METRES FM AT 11 AM. THE PURPOSE OF THE NET IS TO ALLOW FM-
ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT
NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES
ELSEWHERE ON THE BAND.

TO MAKE THE EXERCISE EASIER FOR ALL CONCERNED, THE NET IS
ON THE BLUE MOUNTAINS REPEATER ON 147.05 MHZ, STARTING AT
11 AM. ANYBODY IS WELCOME TO CALL IN AND JOIN THE
DISCUSSION. FIND OUT WHAT GOES ON BELOW 144.600 MHZ.

-- SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

HORNSBY & DISTRICT ARC INC.

The next meeting will be the informal get together this Tuesday the 11th
.. of November, in the Mount Colah Community Centre, Pierre Close,
Mount Colah. (near the eastern entrance to the railway station.) at 8:00
pm. This is a chance to, talk to others about any problems that you have
with equipment, and seek other opinions or how someone else
remedied the same problem.

The Club net is every Monday night using the Club call sign VK2MA.
through the Club repeaters VK2RNS. and VK2RAT. The frequencies are,
147.250 with a positive offset, and 439.975 with a 5mHz negative offset.
All are welcome to join the net, and listeners tune your receivers to
147.250 or 439.975. Yes! we would like you to join the net or come along
to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities wrte to
HADARC., Post Office Box 362., Hornsby 22077., or phone John
VK2WRT on 9807 2490 again 9807 2490.

In article <01bceb1a$02ee9b00$0100005a@wa6vse>,
Carl R. Stevenson <wa6vse@fast.net> wrote:

>Actually, HF is still frequently used, but usually SSB, sometimes RTTY
>or other digital modes.

There is some H&W traffic, yes, but the majority of emergency-related
traffic is usually tactical communication support in the field (Red Cross,
etc.) At least, this is the case around here.

>> Its
>> not reasonable to expect people to operate CW on 2 meters,
>
>Gee Mike, why not? Since 6m and 2m have the ONLY "CW only" sub-bands
>in US regulations. What do you have against CW on VHF??? (admittedly
>playing the devil's advocate here, just to show the Mike's bias is
>mostly towards keeping people off of HF)

Huh? I fail to understand how the vast majority of people operating 2
meters choosing a FM radio over a multimode radio has anything to do with
"keeping people off of HF". The reality of the situation is there are far
more people with FM radios on VHF than there are SSB or CW-capable radios.
Its not reasonable to expect CW use on 2 meters when the radio infrastructure
isn't there to support it.

>> Furthermore, 90+% of the "unsociable" behaviour on the HF bands occurs in
>> the SSB spectrum. Why is it I rarely, if ever, hear the same type of
>> behaviour on CW subbands? Could it be that CW operators are, generically,
>> more polite than their SSB counterparts?
>
>Could it just be that it takes so damned long an is so inconvenient

>However, there are obviously a fair number of CW ops who swoosh carriers
>up and down the bands, send strings of dits on top of other QSOs, and
>deliberately try to jam digital communications because they are in
>"their CW bands" (if they only knew how ineffective their feeble efforts
>are it would be funny)

Oh, there are the occasional few, but I only hear them once in a blue
moon. Yet, I can turn on 75 meters, talk to a friend a couple of states
away, and as the band's propagation starts to change during the night
hear a bunch of rednecks start screaming at me to "get off our frequency,
we were here first!" (I realize the concept of skywave propagation might
be difficult for a bunch of hicks living in grass huts to understand).

>> There are many aspects to the testing process which are irrelevant for
>> communication on HF. Why test me on VEC regulations in the Extra test when
>> it has no bearing for me to operate those additional 25kc CW and SSB
>> chunks?
>
>Because extras are relied on to be the "leaders" of the VE force???

Reread my sentence: VEC. Does the typical Extra become a VEC, Carl?

However, there is no reason to test for VE information either. If you
want to become a VE, let the VEC test you on the requisite knowledge
of policies, procedures, rules, and regulations.

>Whenever compromises are offered, such as Yin's proposal of a few weeks ago,
>many of us no-code-test folks said we would support it, even though it still
>required a 5 wpm test for HF access ...

I don't recall seeing Yin's proposal, so I can't comment on it.

>When it comes to compromise, the pro-code side seems unwilling to budge in
>the least bit .. the no-code side has repeatedly fielded compromise proposals.

That's just plain nonsense. Saying "okay, let's just drop all tests above
5wpm" is *NOT* compromise, because it doesn't address the underlying issue
presented by a majority of pro-code supporters: a continued weakening of
our testing structure to accomodate the lowest-common-denominator of society.

Now, on the other hand, I have publically suggested (although I didn't
create the idea) that we eliminate the question pools, and instead use
computerized testing programs to custom-create examinations where people
need to know formulas and how to apply them. I've actually written to several
division directors in the League about the idea.

If we could implement such a testing change, I would stand right beside
you, Carl, and say we can eliminate *ALL* code testing for HF access.

>> I believe, and do others, that more is wrong with amateur radio than just
>> eliminating the code test will fix.
>
>In that we definitely agree, Mike ... though we may disagree on WHAT else
>is wrong ...

Amateur radio is many things to many people. The sooner you realize that,
the better off you will be.

>> In many respects, I believe that
>> eliminating the code test WITHOUT implementing other corrective action
>> before or at the same time will just create further problems and an
>> inescapable quagmire.
>
>We HAVE proposed "other corrective action" ... it is consistently ignored
>by the pro-code side. The only responses we get are a litany of bitching
>and Morse Myth regurgitations from the pro-code camp.

Please, spare me. The "expansion" of the question pools is often touted as the saviour of theory testing. But, as I've pointed out, if your engine has a cracked block, it doesn't matter if you put in one quart of oil, or 4 quarts of oil -- your engine is still fried. The theory testing structure in this hobby is a joke. No serious educator would consider it a test of anything except short-term memory recall ability -- certainly not a test to ensure people know the regulations and electronics theory they are supposed to in order to operate their radios. It has to be gutted and replaced.

>Eventually the olde fartz will all be dead and gone,

Hey, the sun will go nova too, if you wait long enough.

>but it is doubtful that ham radio will still exist by then ... as they insist
>on maintaining the status quo of stagnation, nostalgia, and Luddism regardless
>of the cost and consequences.

The only problem with your rhethoric, Carl, is that there is no reason to think that even if we DID restructure amateur radio that it won't die. Times change. The plethora of PCS services has rendered amateur radio impotent and useless. No amount of code test elimination, theory test restructuring, or chest-beating will change that.

Source record: 187311

In response to YL Shih,
Don't be angry at me for being so vapid as to misunderstand my posts. Pledges by no-code proponents and ARRL regarding the Morse issue don't mean anything, as I indicated in my initial post to Carl Stevenson. THAT'S THE POINT. You could not have had the capability to understand that because you didn't read the initial post. The meaning of my "ARRL pledge of 1989" post to Brakob, furthermore, was clearly understood by all but those in the no-code camp. Small wonder those in that camp don't understand much of anything.

Get it together, pal.

Regards,
Vince, WB2EZG

In response to Carl Stevenson, who says:
>The idea of a code test as a "lid filter" is absurd....

While this is besides the point re: the Morse issue, you don't know that. What percentage of hams are outlaws on the bands? If it's the majority, we might conclude you are correct. But what if it's 1 percent? Or 10 percent? Or 21.3 percent? Where's the line that shows that the code test doesn't work well as a "lid filter"? Besides, your opponent's statement said a person is LESS LIKELY to abuse privileges when he/she works for something. How do you propose to disprove THAT?

Regards,
Vince, WB2EZG

2331. Code is *NOT* here to stay

As much as the proponents of code want to deny it, the code requirement for HF privileges will not be here forever. That doesn't mean I am pro-No Code. That means I think I can see what will happen. What no one can see is what this will to do amateur radio as a whole. Sure there will be some garbage coming in. Look at 2 meters. Every repeater you care to monitor has some trash on it eventually. Some of it is some wanna be who bought an HTX-202 at Rat Shack. But I personally have heard a licensed amateur use abusive and profane language. I have heard a licensed amateur make threats to "get a baseball bat" to beat someone with.

My point? The license to operate doesn't mean that the effort it took to get the license weeded out the "CBer" attitude. You're gonna see that with or without a code requirement.

Know how to deal with it? Look at your rig. There is a knob to turn and probably a button to push. Think about it for a couple seconds and you'll see what I mean. You hear garbage on frequency - turn the knob or push the button. The garbage dispenser is looking for a reaction. When he/she doesn't get it, they soon leave.

To react and lower yourself to their level will be the end of amateur radio - not the loss of a code requirement.

Kevin, N1UYW

Im not sure what logic is flawed here, are you saying that since there
is no credibility to this web site that libel and defamation of
character do not apply?

> Clearly, it can't be considered serious to any
> reasonable person, and nobody would have a snowball's chance in hell of
> winning in some kind of litigation.

Serious? hmmm I never knew that slander had to be considered 'serious'
to be slanderous.
I think your dead wrong about winning some kind of litigation, while it
would appear that Mr. O'Brien has little or no assets, at the very least
one could get a cease and desist order and probation. I have seen it
happen.

The National Enquirer is looses libel suits all the time, and every one
knows
they have no credibility and who takes their storys seriously? Im having
a hard
time understanding your connection between being serious and credible
and being libel.

> I don't understand how people can get bent out of shape by something as
> ridiculous as that site. Anyone who takes this seriously has some sort of
> maturity problem.

Well, Im certainly not bent out of shape about it, but if someone was
using my call sign or name on a flag with a swastika I think I might be
concerned enough to ask for a cease and desist order from a local court.
This would make me immature?

Tim

You're thinking of P3A. That was the satellite which would have
become Oscar 10 if the booster hadn't failed. Oscar 10 was thus
P3B. P3C was Oscar 13. P3D is the latest and greatest of the
series.

I am talking about 5 wpm JA license. If you have CW license, you
will be allowed to operate within the extra license. (but you cannot
exceed the limit of your original license)

I don't have a Japanese license.

I find it higly ironic that an un-liscensed amateur qrm'er would comment
about the fcc at all. Capt. Truth jams nightly from Gastonia,N.C. on
3894.5 He is a paid accomplice of Richard Whiten,WB2OTK. His equipment
was given to him for the sole purpose of jamming barf members. We do not
hate people of race. Only people like wb2otk and the illegal pirate
capt.truth. We hate all QRM'ers. We hate them all equally,no matter what
the faith.

Nope, I think it is quite obvious that morse is obsolete. And as a 25 year EE and a 20 year ham, I can show you 10 things that work better.

The "we're trapped in a basement with only a battery and a capacitor and some wire" argument is total crap. You'll more likely be trapped in the basement with a laptop, a handy talkie and a modem and a cell phone.

And several batteries.

And you'll have several million times the chance of being noticed, especially given the idiocy that goes on on HF nowadays. "Anyone need this county? I'll relay everything needed both ways so you can work it." "This is the wintertime golf course workers all day watch on 3980. Anyone got a joke?"

HF and CW is a joke.

IMHO if all someone wants to do is talk and not learn Morse Code, let
them "talk" on a CB! If an individual is interested in learning about
radio communications, electronics, and it's history (what I believe
amateur radio is all about) let them learn EVERYTHING from Morse Cose to
digital protocals and then call themself a Ham. (Flame on)

RG-6 style cables are excellent, with low loss, especially the quad shield variety. Make sure you get really good connectors and rubber boots for out door use.

One caution. Since the RG-6 cables are not intended for transmitter use, you will probably be able to find out how much power they can handle. You should have no problems with a 100 watt transmitter as long as your SWR is not too high (3 to 1 or better).

For once, please get this straight. The vile, incessant hate-speech
directed against CW by members of the no-code movement shows
hatred and contempt not just for the test, but for the MODE itself.
There is no reason to believe that, despite the lip service they pay,
that they will not attempt to ban the USE of CW once the test is
eliminated and the bands are flooded with 90% codeless users.

Why do I need to know "why"? If I want to talk to someone in Chicago, do I
really need to know "how" SSB works?

All I have to know, practically speaking, is FCC rules and regulations
governing the modes and frequencies I can use, what I can and can't do
on the radio (play music, etc.), and some basic station safety so I
don't blow myself up by grounding my station to my natural gas meter.
Other than that -- understanding something like ohms law, how SSB
works, and so on -- is truely pointless.

Oh, and I definitely need to know UPS shipping policies for when my
radios break down. Should I send my radio back red label if I am in
the same zone? Is GroundTrack or Orange Label better?

Judging something by callsigns is pretty stupid these days, Glen. Since
Roger has a vanity call, his callsign tells you next to nothing about
him, when he was licensed, or what type of code test he took.

You certainly are right about one thing, though: I did overlook the
possibility that Roger got a medical waiver, and didn't even have to
guess correctly 7-out-of-10 times on a 20wpm code test. It was my mistake
assuming he even took a 20wpm code test.

The answer is simple.... Just ask the M.A.R.S. commander why they do not allow code (CW) to be used on their frequencies and you will get a very good and simple answer.

While we are asking questions..... ask the F.C.C. why they get requested to use the CW portions of the bands for voice communications during emergency situations.

Also ask why Japan is increasing the number of hams faster than we are. What is their reason for success while we fail?

Get the answers to those questions, ask a few of your own, and then THINK. If you are under age 75, in good mental health, and not on drugs, you will understand why those that make the rules need to be given a "boot to the head" and a more reasonable policy adopted.

Hello..

Does anyone know how to adjust the stopping point for the Auto Tuner on the TS440s??
I know there is an adjustment somewhere inside that you can tell the tuner to stop when it gets to a 1.2:1 SWR versus, say, a 1.5:1 SWR or 2:1 whatever.
I haven't been able to find anything about it in the Service Manual either. Any ideas??

He is correct,

I have a station here in Japan right now 7J4ACS. I am allowed as a Tech+ to operate on all bands except 30 and 20 meters. Its ture that I am only allowed to run 50 watts, but you would be surprized how many contacts you can make on low power. I would rather have access to all bands with low power, then fewer bands with higher power. Besides there isn't much differance between 50 and 200 watts.

>because of a change in the P3D launching structure requirements... any news
>of then new Sputnik that was supposed to be up on Mon.?

AFAIK, P3D was *always* scheduled to go on 502, but 502 was delayed about
a year due to the launch failure of 501. Analysis showed the structural loads
on payloads riding the Ariane V satellite bus would be greater than AMSAT had
been told, so AMSAT had to re-engineer the structure to handle the higher loads.
That couldn't be done in time to meet ESA's launch schedule for 502, so P3D
didn't go. ESA recognized that this was partially their responsibility because
of the structural load parameter change, so they released AMSAT from their
launch contract. So the launch money is still in the bank, and negotiations for
a new launch opportunity are in progress.

This is not a bad thing. First, the next launch vehicle will benefit from
lessons learned from 501 and 502, so it is likely to be a much more
reliable vehicle. Second, this allows AMSAT to continue to refine the
payloads on P3D. Thus our chances of getting a good satellite in a
good orbit have improved considerably. The only cost is that we have
to be patient a bit longer.

Sputnik II was hand launched from MIR and is beeping away on 145.820.
You can copy it with just a handheld, though of course a better setup works
better. It is approx 2 km above and behind MIR at this time, so figure on
hearing it just after MIR passes over. Doppler is about +/- 3 kHz.

I guess the above quote pretty well summarizes my
disagreement with Larry. Our hobby cannot survive as a
niche hobby for elderly engineers and Morse enthusiasts.
Our lack of numbers translates into many undesireable trends
now: cities routinely ban our antennas, electronics
manufacturers refuse to spend half a cent to properly shield
appliances from RF, CC&Rs routinely are hostile to hams,
other services covet our bands, and so on. These trends are
a direct reflection of our lack of numbers, and the
resulting lack of political clout.

Furthermore, the hobby would be more fun if there were more
people of all ages on the air.

If there was a good reason for keeping the Morse
requirement, I would be for that. I have heard none. It
took me a lot of years to change my mind (I used to be in
favor of a stiff Morse test like we have now), but I am
convinced that Morse is killing our hobby.

If that sort of half-wit logic is what has driven ARRL
policy (which I doubt) then God help our hobby.

What the heck does dropping an archaic, nonfunctional
requirement have to do with deregulation? Nothing, that is
what. Change happens, people. Things do not stay the
same. This is normal. Of course, it is also normal for
some people to oppose change, merely out of reflex. This is
what is happening with Morse Code. Some people are
predicting that all sorts of awful things will happen if we
create a no-code (but a yes-theory/reg) HF license. I doubt
that. With any luck what will really happen is that we will
have more and younger, more motivated hams.

This will be a good thing: a renewal of the hobby.

> Bill Nelson (billn@peak.org)

Bill .. the problem with your argument is that it assumes gratuitously
(and falsely) that the regulatory purpose of ham radio's existence is
"to provide enjoyment to the participants.)

Actually, the purposes set forth in the ITU treaty and FCC Part 97.1
are far more along the lines of encouraging experimentation, self-training
in radio/electronics, advancing the SOTA, and providing a pool of competent
trained "operators and electronics experts" (notice the linkage ... it
implies strongly that technically inept operators are not enough and that
technical expertise is an important desired outcome).

NOWHERE in Part 97 does it really mention, let alone emphasize, the purely
recreational aspects that most have, unfortunately, come to view as the
"purpose" of ham radio ... this slide into self-indulgence, apathy WRT
the *real* purpose, and the incredible degree to which present-day hams have
become technically ignorant, incompetent appliance operators bode very poorly
for the future survival of ham radio. This is why we seek a number of changes
in rules, requirements, licensing structure, etc. ... to align amateur radio
with the world we live in, rather than the 1920s or 1930s as it is now, in
order to promote growth and vitality (as opposed to decline) and assure ham
radio's survival into the next century.

I agree with you totally Mike. The no-code nonsense is exactly
that...NONSENSE. If people are merely too lazy to learn a relatively

simple method of communication, other than merely using their big mouths to create more QRM, then maybe they really aren't interested in anything other than instant gratification for their personal needs (kinda of a politically correct philosophy). I'll bet I get flamed from no-coders just for agreeing with your viewpoint (I'm an old geezer at 51 anyway...also was licensed as a Novice in 1980 and upgraded to use voice in 1986).

The following items are in " as-found" condition, were part of a radio collection I
purchased this past summer & some earlier purchases.
Radio Craftsmen mono power amp RC2, no cage. Overall condition very good to excellent. Dirty but I don't see any pitting. Missing bottom plate, power cord poor. 6V6 P-
P outputs, works well. $120.00. To see a picture of this item goto
http://members.aol.com/vintel/4354.jpg

Heathkit AA191 w/metal case. 3W mono integrated amp. Overall appearance good. Not
tested. Missing 1 foot. $25.00. item 4521

Heathkit A7 (70?) mono integrated amp, no cage. Grey hammertone panited chs. Overall
appearance very good. 12V6 P-P outputs, loud hum only. $35.00. item 4522.

Heathkit UA2 mono power amp, no cage. Overall condition very good to excellent. Gold
painted chs, EL84 P-P outputs. Works well. $45.00. item4523

Merrell MA12 mono integrated amp, no cage. Brown painted chs, overall appearance very
good except a little rust on transformer. 6V6 P-P outputs. Not tested. $25.00
item 4524

Bogen DB114 mono integ amp. no case. Overall appearance is very good. 6V6 P-P outputs. Not tested. $25.00 item 4353

Bell 2256 integrated mono amp, w/metal case. Overall appearance is very good. Not
tested. $20.00 *Matching tuner below* item 4202

Bell 2255 mono tuner AM/FM/FM-AFC. Overall appaerance very good, gold painted case
& face. Not tested. $20.00. *Matching amp above* item 4201

Sherwood S1000 stereo integrated amp w/ case. Overall appearance very good. Brief test
found it dead. $50.00 item 3882.

Knight KA55 stereo integ amp w/brown metal case. Overall appearance very good to
excellent, fornt panel markings excellent. Not tested, missing 1 6973 & 2 other tubes.
$55.00. item 3884

All prices are + S&H from Baltimore, Md. Will consider reasonable offers after this
posting is up for 48 hrs. International shipping available. Contact
vintel@aol.com to order.

Also
10 ea 1X2C & 10 ea 3A3(3A3B, 3A3/3AW3, 3A3C). NIB TUBES. Price $1.50 ea +
shipping from Baltimore, Md.
20 Electrolytic capacators, paper cover, under chassis mount w/ mounting strap, multi-
section, 150V. The type that was used in a lot of "All American 5" radios. All
are unused.
General Inst, Aerovox, Planet, etc. 80 & 50 mfd, 50 & 30, 40, 20 & 20.
$17.00 + $4.00 shipping in contenintal US.

Presumably this means you wouldn't throw a drowning woman a life-preserver because she was abviously too lazy to learn to swim as a child and therefore did not deserve any sort of artificial equalizer - good Ham attitude Terry (and Michael) let everyone who doesn't match your personal ability drown - screw them - they are a bunch of worthless money-for-nothing no-hopers - eh. Wonderful.

Sure there would, people would be asking to bring morse back and saying how great the hobby was when people still had to know code:-)

Seriously, if they did remove the code requirement, what should they replace it with?

I would head back to fundamentals: why are there any requirements for licencing? Why did I need to learn theory and code to get on the air?

I would be curious to see how people would seriously answer those questions.

Keeping anybody out is not a valid reason in itself.

Safety and the ability to operate responsibility are probably the only legitimate reasons for licencing requirements.

If taking out the code resulted in so many new hams that the bands were overwhelmed then it might be necessary to have a lottery system or come up with better ways to use spectrum. (Actually the more of us the better in some ways).

Great. 70 million US hams spread out over HF's 3.75 MHz, where if you so
much as sneeze, half the world might hear you.

Go back to 2m, Ian.

In response to Roger Buffington,
Quoting a former ARRL president, who was an electrical engineer to boot, does a lot of things. Being ARRL president, Vic Clark had first hand knowledge as to exactly what was going on.

It's amazing that his short statement of 15 years ago was so prophetic, isn't it! But maybe not so amazing. After all, he knew what was going on, Roger, and you didn't. And still don't. In case you haven't looked over your shoulder, there's a tremendous backlash today to easing requirements into the hobby.

Regards,
Vince, WB2EZG

I have a IC-741A UHF all mode I got at the yard sale of a silent key. I dont have the heart to bug the widow for the manuals...

It does not have the assesory plug, and will not give audio as a result.

Does anyone have a manual/schematic for this rig?

It has been demonstrated amply that modern digital modes can beat the
crap out of Morse on both power and bandwidth for equal or greater
data rates and can operate at signal levels where Morse can't even
be heard to be copied. And this can be done with equipment that is
only marginally more complicated than Morse gear ... not enough
"extra" complication to make it unattractive to anyone with the smarts
to build it and use it ...

> By comparison, voice requires much more power and bandwidth and more
> sophisticated equipment.

So???

> In certain situations, Morse is the only viable option (other than not

Please elaborate ... I can't think of a situation where a well-prepared
ham would ever find Morse his "only viable option."

> If you have the luxury of being able to transmit

> isn't there to support it.

That's a weak argument ... especially in light of how so many pro-coders
always rush to point out how easy it is to build OOK Morse equipment ...
it sounds like you're dodging the bullet here, Mike ... you said "Its not
reasonable to expect people to operate CW on 2 meters." I pointed out that
the only CW only subbands we have are at 6m and 2m ... and you come back with
something about people buying FM radios ... and yes, I still maintain the
opinion that your main agenda is to keep as many people as possible off of HF.

> >> Furthermore, 90+% of the "unsociable" behaviour on the HF bands occurs in
> >> the SSB spectrum.

Gee, Mike ... could you send me a copy of the study that proves that??? :-)
I have seen a lot of lids, jammers, and assholes on CW as well as on SSB.
The main reason why it may *seem* that there is less "unsociable" behavior
in Morse than on SSB is that it's so damned much harder to say anything
of substance in that mode ... since you have to spell everything out letter

by letter ...

> >> Why is it I rarely, if ever, hear the same type of

> be difficult for a bunch of hicks living in grass huts to understand).

Ah yes, Mike ... but they're CODE TESTED rednecks, aren't they?
(obviously as lid filter, Morse is completely ineffective, however if we
retested those cretins with a decent theory test at their next renewal,
we'd probably rid ourselves of 90% of them)

> >> There are many aspects to the testing process which are irrelevant for

> >> chunks?
> >
> >Because extras are relied on to be the "leaders" of the VE force???
>
> Reread my sentence: VEC. Does the typical Extra become a VEC, Carl?

He CAN, Mike ... that's the point ... even you are permitted to tinker
and experiment, though we all know you prefer plastic and FedEx to radio
electronics ... but the fact that you are allowed to tinker and experiment
means that the government has a reasonable need to have you show some modest
degree of technical knowledge and competence ... though we both agree that
the tests could be MUCH better.

> >Whenever compromises are offered, such as Yin's proposal of a few weeks ago,
> >many of us no-code-test folks said we would support it, even though it still
> >required a 5 wpm test for HF access ...
>

How "convenient" ... it was only posted and reposted a few dozen times
and discussed over several weeks ... if I say "bullshit" and you're always
Mikey-on-the-spot to comment on it ... but you "don't recall seeing Yin's
proposal"??? That REALLY stretches credibility beyond the limit, Mike.

> >When it comes to compromise, the pro-code side seems unwilling to budge in

That's a bunch of mealy-mouthed crap that doesn't say a damned thing except
"no compromises accepted here."

> Now, on the other hand, I have publically suggested (although I didn't
> create the idea) that we eliminate the question pools,

Yes, knowing full-well that that can never happen due to the FOIA. That's
a "throw-away" gesture offered in bad faith with full knowledge that it's
a virtual impossibility ... it's just a device to make you appear to be
"trying to be reasonable." It's not worth the bandwidth it consumed to post
it.

> and instead use
> computerized testing programs to custom-create examinations where people
> need to know formulas and how to apply them. I've actually written to several
> division directors in the League about the idea.

There is no reason that this could not be implemented, but the pools will still
be there ... but computer randomization of variables could be easily
implemented
and would eliminate the memorization without understanding on the theory part.
Of course, the rules/regs part can only be memorized anyway ... I would have no
problem with an open book test which permitted the use of the Handbook or other
reasonable reference materials ... one does not need to have every formula in
one's head all the time ... I frequently consult reference works for things
that
I only use on occasion ... "RAM" is more costly than "Hard Disk space" (or Tape
backup) ...

> If we could implement such a testing change, I would stand right beside
> you, Carl, and say we can eliminate *ALL* code testing for HF access.

If you will accept the fact that the pools will stay, but can be enlarged
and parameters randomized, then you and I could agree on this, if you are
sincere. But if you are just using this as an excuse to never "be able"
to agree to eliminating Morse tests, we well continue to go round and round
I guess ...

> >> I believe, and do others, that more is wrong with amateur radio than just

> >
> >In that we definitely agree, Mike ... though we may disagree on WHAT else
> >is wrong ...
>
> Amateur radio is many things to many people. The sooner you realize that,

> the better off you will be.

I realize that ... but there are fundamental reasons for our existence and playing games which only use the radio medium as a playing field are NOT even on the list (according to Part 97 and the ITU definitions) ... I am not saying that all that should be banned ... but I think that the areas on which the importance and emphasis are placed have gotten WAY out of kilter.

> >> In many respects, I believe that
> >> eliminating the code test WITHOUT implementing other corrective action

> the saviour of theory testing. But, as I've pointed out, if your engine has
> a cracked block, it doesn't matter if you put in one quart of oil, or 4
> quarts of oil -- your engine is still fried.

The block isn't cracked, there's just a bad gasket and the timing needs to be adjusted ... a good tune-up will have her running fine ...

> The theory testing structure
> in this hobby is a joke. No serious educator would consider it a test
> of anything except short-term memory recall ability -- certainly not a
> test to ensure people know the regulations and electronics theory they
> are supposed to in order to operate their radios. It has to be gutted and
> replaced.

I agree to a large degree ... except for your last sentence ... it needs to be fixed, but that will only happen within certain constraints ... hell, I would have no problem with a test that would drive the VEs berserk and result in waiting lists for testing sessions and the need for double or triple the amount of VEs that we now have ... but it's not likely to get *quite* that good.

But Morse testing doesn't *add* anything of value ... it only detracts. If those who wish to become HF hams were not burdened with spending hundreds of hours to learn to copy Morse "real fast" they might actually spend a good part of that time learning something truly useful. As it is, many blow off learning the theory and spend virtually all of their time on the hard part (learning Morse) ... knowing that they can cram for the multiple guess written test in a week (or weekend) ...

> >Eventually the olde fartz will all be dead and gone,
>
> Hey, the sun will go nova too, if you wait long enough.

Yes, but if we don't get some changes, ham radio won't last for either event.

> >but it is doubtful that ham radio will still exist by then ... as they
insist
> >on maintaining the status quo of stagnation, nostalgia, and Luddism
regardless
> >of the cost and consequences.
>
> The only problem with your rhethoric, Carl, is that there is no reason to
> think that even if we DID restructure amateur radio that it won't die.

There are LOTS of reasons to believe that a modern, vital, contributing
ham radio service will survive.

> Times change.

And ham radio HAS to change with them ...

> The plethora of PCS services has rendered amateur radio impotent and
> useless. No amount of code test elimination, theory test restructuring,
> or chest-beating will change that.

That is where we disagree Mike ... and since I am a professional in the RF
engineering/wireless communications field, I believe I know a bit more about
the realities of the situation in that respect than you do ... that doesn't
make me a "better person" ... it just says that I realize that there will
ALWAYS be a place for ham radio and that it can grow and flourish ... IF WE
MAKE IT CATCH UP WITH THE TIMES. If it continues to stagnate and regress
into the past as the ARRL/FISTS/pro-coders seem intent on making it do, then
it will become useless and will meet a deserved fate. I don't want to see that
happen ... so I argue for the changes I know need to be made. It's really
as simple as that.

(OK, it's your turn, go ahead and flame me ...)

> what point are you trying to improve by the inclusion of "beeping" in
> that sentence?

My point, Ed, is that all those lids on HF that everyone bitches about
are "beeping lids" because they (virtually) all passed the Morse test.
Most ar long-time coded hams and it matters not whether they threw the
key in the trash 20 of 30 years ago or not ... they still eluded "the
ultimate lid filter" (which is how most beepers view the Morse test)

So, to answer your question, I meant to insult all lids whether they
currently beep or not ... is that clear enough? And why do you have
a problem with insulting lids? Are not lids *supposed* to be the objects
of disgust and ridicule? Or does that only apply to *non-beeping* lids?
(Though I don't know how there could possibly be any non-beeping lids on
HF, since beeping is a required "skill" to access HF.)

That is absurd, Mike ... in many cases, the *reason* a person
leaves office in an organization is because the membership
did not like their policies or their actions (and voted them out)
... to "bind" the successor to "promises" made by his predecessor would be
to "thwart the will of the members" ...

:
: Not the point: You can point to no compelling reason to keep the code test
: requirement. THAT is the challange: As a "hobby only" activity, CW may be
: done (certainly), but to REQUIRE the testing for it requires the
: "compelling reason". My point here was that CW is un-necessary -- so you
: cannot say, "We absolutely NEED to know CW, hence the requirement."

By an extension of the same argument - there is "nocompelling reason" to
retain either the theory or rules/regulations tests either. Both are
unnecessary to enjoy Amateur Radio.

These people do make up the backbone of our public service
and emergency communications today. That *is* one of our
charter purposes. And they retain the option to expand their
horizons by building and experimenting at a later time if they
become interested in doing so. They are quite a bit more than
just a "body", though that is important too in today's political
situation.

>Eliminating the code test, and not revamping the licensing structure

>The anti-morse contingent has not put forth a comprehensive proposal
>to address this need.

Well of course we have, many times. But you code-not-theory types
don't like it. I think every amateur needs to understand how their
radios work and how radio waves propagate, but I don't think every
amateur has to build all his own equipment. That's often not cost
effective. There are many facets to amateur radio, and building
equipment is only one of them.

Maybe you could support that line of argument in a fascist state. But in our republic the burden is always on the government, and those wanting the government's force used for their purposes, to prove that any imposition made on the freedom of action of its citizens is both legitimate and necessary.

The burden of proof is always on those wishing to restrict freedom, not on those demanding to exercise it. So the burden is on you to defend the current Morse speed testing requirements as both legitimate and necessary exercises of government power to limit citizen access to public spectrum.

AFAIR, it was intended to be used with a osciloscope, to look at the
transmitted signal.
Prehaps it could be used with a counter, BUT check the output level first!
BTW, if you DO open it up, assume that the oil contains PCB-many hams used
to fill the Cantenna with transformer oil:old transformer oil often
contains PCB.
The stuff is not highly toxic, assuming minor exposure(if it was, I would
not be here-I've had to remove more than 1 leaky(physically) motor
capacitor(the
oil-filled ones used PCB containing oil too)), but be careful anyway.

I'm probably being pedantic,but it does seem strange to me that my modem
can connect to my ISP at 28,800 baud over a link which apart from being
duplex is little better in supposed bandwidth than a VHF radio link.
Why are we still poodling around at 1200 baud?

>

Since I hold an Extra class license, you may safely assume
that I know Morse Code.

While there are some young people using code, mainly it is
used by elderly hams. Many times I've done seven or eight
CW qsos in a row, all of which began with the other side
saying something like: "age here is 83, retired 30 years
ago, after WW2..."

Despite what you say, which I don't doubt (that some young
people are not turned off by Morse) my experience is that
most are. It is a drag, and it is archaic. Even many Morse
advocates on this forum admit that when you demo a Morse
QSO, the visitor gets listless, and glances at the door
every few seconds. Morse adds to the fatal image that our
hobby already has, that it is a hobby mainly for the
elderly. This is not desireable.

I agree that code has a place in our hobby. I merely don't
believe that a code EXAM should be a requirement for an HF
license. Two different things, you see.

2401. Ampliphase, What is it?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-08 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <34645F16.9798AF7F@exit109.com>
Source record: 187201

Hi,

I'm doing some research on the many major methods of Amplitude Modulation used through the years.

Sometime in the 1950s, RCA introduced a broadcast transmitter BTA50G which used a technique called Ampliphase. I already have some explanation of this technique as basically mixing a fixed carrier frequency with another output which was in quadrature at 0 modulation and varied in phaseshift to either cancel or add to the carrier. I would like more details about this technique, like at what power level was the mixing done at. What power level did the fixed output run at... the phase shifted part run at, etc. What were some of the problems with this modulation. How did it compare with the hi-level plate modulation in quality, cost of operation and equipment space.

If anyone could tell me more or point me to a reference describing this, I would appreciate it.

Thanks,
Jim Hawkins - WA2WHV

I think in the really early days it was supposed to go on 501, but this
was changed to give the cluster sat builders an earlier launch and an
opportunity to lauch all 4 satellites in 1 launch. They are still thankful
for this preference :-) (I read some story by the Cluster guys about this
on WWW some time ago, a search on Ariane 5 and Cluster will probably find it)

If you think that then you haven't listened to a CW contest lately. Try tuning across the CW portion of the spectrum at the end of November, when the CQ WW contest is on the air. There is an incredible amount of activity, people all over the world, lots and lots of them, use CW. And they are very good operators. CW is not going to 'die off', as much as you might like it too. It is as much a part of ham radio as repeater operation is. I personally think we would be well served to keep CW a part of the licensing requirements. The most compelling argument is to insure the amateur bands don't become like 11 meters.

So if the ITU at WARC determines that no one has "provided a compelling
reason for retaining the code test requirement" (and changes the
international requirement) you will then lobby to end Theory/Regs testing?
Your response seems to say that the "compelling reason for retaining the
code test" is that it protects the theory testing?

If you look through many of the postings on this overall topic, you can
find many (on both sides) who feel that there is (and should be greater)
value in the Theroy/Regs testing. I will leave the defense of the Theory
testing with them.

I am still waiting for even one compelling reason for retaining the code
test requirement.

Are you sharing the phone line TDMA with other users? Are you doing
call setup in-band? Is the link half-duplex? No, no, and no, right? That's
the reason.

To operate in a sub-Nyquist channel you need to do training between
the modems. That's the noises you hear when your phone modem
is establishing a connection. All the current chipsets require the channel
to be full duplex to do this. Now we could create our own chipsets to
let us do this on a half duplex channel, but we haven't done that.

We share the channel on a packet by packet basis with other stations.
We don't do that on the phone line. Call setup is done out of band
and the modems can assume that they have exclusive use of the
channel for the duration of the call. Thus they can keep the same
training sequence derived equalization for the entire duration of the
call. But in a TDMA shared channel, the modem has to be able to
copy *every* packet transmitted in order to determine if it is addressed
to it. To do that, it needs to know the equalization it has to apply to
decode that packet. But it can't know that until it knows who sent it.
And it can't know that until it decodes the packet. Catch 22.

(The equalization will in general be different for every pair of stations
due to multipath differences between them and due to different equipment
setup.)

Thus we can't use the techniques used by the phone modems to
increase the data rate in a voice width channel. We have to do things
in a more brute force way, and that requires more bandwidth. But our
voice grade FM radios don't have that bandwidth, so we can't go faster
using them. We have to change over to a purpose designed RF modem
to do higher speeds.

One such is the WA4DSY 56 kb RF modem. It uses MSK to get a
spectrum efficiency of 1.4 Hz/baud. That translates to a roughly 70 kHz
bandwidth for 56 kb. We have that sort of bandwidth available at UHF,
but not at VHF. So we need to move to UHF to get the speed we want.
The WA4DSY modem does that with the aid of a transverter to convert
its 10m signals to the UHF band of our choice.

Spread spectrum is another way to get around the need for individual equalization setups for pairs of stations. SS is inherently resistant to multipath and the high chip rate puts it well above the Nyquist limit, so we can use this without much trouble for high rate data. Of course SS also needs a special radio, not a voice grade FM radio. Regulations confine us to UHF for this sort of operation too.

Uh, no Roger, all we can assume safely is that you were able to correctly
answer 7-out-of-10 questions on a multiple choice examination. How you
arrived at those answers -- tarot cards, flipping a coin, throwing a dart
at the wall -- does not mean that you copied a sufficient amount of code
in order to determine what the correct answers were. Hence, it is NOT a
safe assumption that you know morse code.

Because olde fartz have resisted modernization or rules to encourage and
permit the introduction of new technologies, have insisted on maintaining
a Morse code hazing ritual that turns many technical types off to ham radio
completely (our loss), and to many hams are too damned cheap to spend any
money or too lazy on something better ... all many want to do is to connect
to their local BBS or DX packet cluster and have no clue as to what amateur
packet *could* (and should) be if given a chance.

2413. Ten-Tec service?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-08 00:00:00 UTC
From: kenk@primenet.com
Message-ID: <64265p$ouo@nntp02.primenet.com>
Source record: 187213

I read here(?) that the address of Ten-Tec was changed recently. Can someone tell me where to send one of their transcievers for service? Either Ten-Tec itself or an authorized repair center.

If a repair center, one in western US prefered to save shipping costs. This little rig is HEAVY!

Do I need to call them first? If so I need a phone number, not an address. Never had anything like this serviced before so I don't know the protocol. It's an old Century/21 (frequency dial doesn't turn), not a new rig for warranty service.

TIA.

Ken

>Since I hold an Extra class license, you may safely assume
>that I know Morse Code.

Roger:

Why should we ass-u-&-me that? Years ago, you could have had a friend sign you off on 5 WPM for a Novice ticket, and you could have upgraded with a medical waiver. It's entirely possible to have an Extra-class license and not know the difference between "CQ" and the telephone ringing. Considering all the 1x2 and 2x1 calls I hear on the chaotic HF phone bands, I assume NOTHING regarding an Extra-class licensee's code proficiency.

>While there are some young people using code, mainly it is
>used by elderly hams. Many times I've done seven or eight
>CW qsos in a row, all of which began with the other side
>saying something like: "age here is 83, retired 30 years
>ago, after WW2..."

When I lived in Europe (Germany and England) and made hundreds of QSO's on 80-meter CW with neighboring countries in Europe and on the Asian and African continents, most of the CW operators were in their 30's and 40's. It would seem to me that the United States is the only country with a problem of an "aging" population of hams.

>Despite what you say, which I don't doubt (that some young
>people are not turned off by Morse) my experience is that
>most are. It is a drag, and it is archaic.

Well, I can certainly see how someone just being exposed to ham radio would see Morse as being a "drag" and "archaic" if whoever was doing the demonstration was coming across with that attitude. However, whenever I've demonstrated Morse, particularly to young people, they became quite intrigued by it, and seemed to pick it up at an amazingly fast pace. The only problem they run into is that they don't have the spending power to set up an amateur radio station, so they're usually relegated back to the Internet before they can get themselves going as hams, since their non-ham parents don't see the point in investing in ham radio when the kid already has a computer and the Internet.

For the above reason, I find the notion of getting "young people" involved in ham radio to be somewhat of a waste of time, since they don't have the resources to get off the ground in the hobby, unless they're related to other, older hams in the family. It's the people in their 20's, 30's, and 40's we

should be looking for as potential hams, those with jobs, incomes, and property which can become the platform for an amateur radio station. However, since they would be turned off by the lack of "instant gratification" vis-a-vis the Morse Code, we don't get them involved either. So, what's the answer -- a "welfare program" to provide equipment to young kids? Or a "welfare program" to eliminate the CW "barrier" for older potential hams who have the economic resources to participate actively? I say, ...neither! We will simply have to depend on enough people taking individual initiative to do what they have to do to become licensed amateurs, as they always have. All we need is public awareness -- not active "recruitment."

Even many Morse
>advocates on this forum admit that when you demo a Morse
>QSO, the visitor gets listless, and glances at the door
>every few seconds.

Well, when this happens, I push them OUT the door, and lock it behind them. After all, I wouldn't want to inconvenience them by suggesting that they learn something different!!!

>Morse adds to the fatal image that our
>hobby already has, that it is a hobby mainly for the
>elderly. This is not desirable.

Funny, I don't perceive our hobby as having any kind of "fatal" image. But, then again, I also don't hold onto some silly notion that our hobby has to be all things to all people, or that it needs to attract enough newcomers to double our numbers or anything like that. The main reason is that I have no financial interest in the ARS. I'm not an equipment manufacturer, a ham magazine publisher, or a board member of the ARRL. I don't have *my* professional or political future tied to the "consumerization" of the ARS. I think you'll find that that makes a big difference in personal outlook.

>I agree that code has a place in our hobby. I merely don't
>believe that a code EXAM should be a requirement for an HF
>license. Two different things, you see.

No, the existence of the Morse Testing requirement and the existence of the use of the Morse code are directly connected, and always will be. If we eliminate the testing requirement, and the attachment of higher HF privileges in all bands and modes to the requirement, then we will have a situation develop which will require expansion of SSB into the present CW/DATA spectrum. That will be the source of the problem. One of the side benefits of Morse Code testing is that it keeps an upper limit on the growth in the numbers of high-power SSB operators, which is a very useful side benefit indeed. Indeed, Morse testing isn't a "lid filter" per se, but it does provide an effective barrier to increasing numbers of *potential* lids.

In response to Bill Sohl,
Without requirements, code or theory, no one bothers to
do anything. Furthermore, without a theory requirement,
no one even bothers to read the License Manual's exact Q&A.
There are no license manuals sold, and people lose money
in a chain reaction all the way down the line.

Without college degree requirements, I ask for my Ph.D,
and receive it, based on my life's experiences.

Life has, is, and always will be involved with meeting
requirements. No need for a Morse requirement? Well, there
is STRICTLY speaking, no need for a theory requirement as well.

Regards,
Vince, WB2EZG

Karl claims to work in "cutting edge" technology, but I've yet
see any of his research results applied to ham radio. Just what
has this self-professed researcher done to advance the ARS in his
20+ years as a ham? In which scholarly journals has his communication
advancements appeared? And if him, being a ham for so long and also
working in the communications industry hasn't done squat, what makes
him think that real professions will be interested in carrying their
8-hour per day job into their ham radio hobby?

By the way, anyone altruistic enough to do research in the HF/VHF/UHF+
region does not need a ham license; any neighborhood ham will surely
provide his license and operating privileges to assist Karl's imaginary
reseacher. (Cecil: Why haven't you offered your amateur services to
your professor who desires to conduct HF research yet won't bother to
get licensed?)

Actually Don, I'm slightly offended by your implication that people that don't know code, such as myself, are dragging down ham radio (talk about abusive).

I am not less civilized because I do not know code. And knowing code will not make you, or anyone else, more civilized. A troublemaker can learn code. And a nice person can be excluded because he/she does not know code.

And I firmly believe that if code continues, there may be no HF ham radio activity in the future. And then you won't have to worry about abusive people, crowded bands, or anything else.

> Maybe we should lower the need for doctors to learn early medicine
> because it's no longer used or needed.

This is not a good analogy to use with morse code. A doctor does not need to learn blood-letting (a very common medical practice at one time) to be a good doctor today. A doctor needs to learn MODERN medical practices that will help with the patient's treatment. Code is not needed for modern communications.

> It is needed. By the majority of Hams who WANT it.

And absolutely nothing will stop you from using it if it is dropped as a requirement for licensing. If it is as good as you seem to think it is, people will continue to use it because they want to use it.

But, considering that no other radio service in the United States has a morse code requirement for licensing, it is silly to continue it as a licensing requirement for ham radio.

I don't think many modern medical schools place a lot of emphasis on
the old practice of opening veins to "bleed out the evil spirits." Morse
is similarly archaic.

> It is needed. By the majority of Hams who WANT it. You don't want
> it... you are in the minority.

Actually, as I've pointed out many times, by the ARRL's own survey, the
percentage (of ARRL "member" hams, which IMHO selects in favor of more
likely Morse affinity)who use Morse "regularly" was only 27% ... hardly
a "majority" as you claim ... the remainder (except for 1% who didn't
answer the question) was remarkably evenly split between "never" and "rarely."

Seems your "majority" is simply a "vocal minority" ...

I am trying to straighten out a circuit for an Old Timer friend. He built it over a year ago and hasn't been able to get it to work. It is an Audio to Push to Talk circuit that appeared in 73 Magazine in January of 95. There seems to be a problem with a change in the size of R5 and R8. There is an update in the May 95 issue but I don't have any issues past that and it doesn't mention those resistors. Has anyone successfully built that project? Any help appreciated.

Also, if anyone has a copy of the June, 1995 issue of 73 magazine and could look in it and see if there is an "update" talking about the above mentioned article, I'd appreciate knowing what it said. I don't have that particular issue. Thanks.

73 George, KQ7C

Whats so special about 'building radios'? In the last 20 years of my
adulthood I've ran my own business (twice), learnt to horseride &
competed, learnt to Scuba dive and been all over the world diving.
I've also become a radio ham, but I'm not interested in building radios
any more than I am in building the cars that I drive (although I have
done that too), and I wouldn't dream of making my own aqualung.
This self-centred builder-ism is often used in such a way as to suggest
that it is the only human achievment worth talking about,
Well it isn't.

WRONG, Vince ... the burden is actually on the government to
justify the continued existence of an arbitrary, discriminatory,
unnecessary restriction on otherwise qualified applicant's access
to privileges that are TOTALLY unrelated to Morse proficiency.

Creating a "reward system" for those who "go with the old guard's
program" is NOT an appropriate exercise of government power.

Actually, Jeff ... I know Phil and he has_built/does_build some pretty impressive stuff ... all of it is WAY beyond your 1 or 2 transistor/tube MOPA OOK Morse crap, but that is, I guess an inherent result of your inability to comprehend anything better than the crap you build.

Phil has made enormous contributions to ham radio ... you are not competent or qualified to lick his boots in terms of technical ability, let alone to criticize and insult him as you try to above ...

Anyone who knows Phil will immediately recognize what a dim-witted, narrow-minded JERK *you* are Jeff.

>Cliff

Gentlemen,

Sorry that I didn't see the original post and can only respond to the
response.

Use of 75 ohm cable with 50 ohm equipment is not as strange as it may
seem.

The impedance seen by your transmitter (or tuner, if you are using a
tuner) is not the impedance of the cable - it's the impedance of the
load at the far end of the cable, transformed. The transformation is
a function of the frequency, characteristic impedance of the line, and
the length of the line.

For example, assume that the antenna presents a complex impedance of
75+j60 (109 ohms magnitude). Further, assume a 75 ohm cable and a

length of cable of 0.15 wavelength. For example, at a frequency of 3.8 MHz the cable would be physically 29.13 ft. This is from the equation relating the number of wavelengths (N), length (L), velociy factor(VF) and frequency(f). (I used VF=.75 for RG-6)

N = L * f / (984 * VF). (VF=.75)

If you now go to the Smith Chart with these values (0.15 wavelength, 75 ohm line, and the antenna impedance above, you will see that at the transmitter the impedance will be seen as 50 ohms. (50 + j0). So, there's an example of how the 75 ohm line can be used effectively.

My general advice is to become familiar with transmission line theory and the Smith Chart. You then have to put connectors on various lengths of cable and be prepared to use them where needed. It often turns out that a specific length of some strange characteristic impedance is just what you need in a given situation.

Good Luck,
Bob

The laptop and modem won't do you any good because the outside VHF antennas are gone, and the stubby duck on the Ht 'might'-just *maybe* hit the repeater or digi *if* they had survived, but no--the quake took them out, too. Cell phone, in an emergency? That's a laffer.

So there you sit with all the hi-tech digital and voice stuff of your No-code dreams, dead in the water. You're gonna need a bit more that a capacitor and some wire, though.....better learn code and make some back-up plans.

REPLY...

Okay N8BLK, the dates given in my message were not meant to be a chronological record of exact dates and time. For the record (and to satisfy you), I was born November 11, 1953 (which makes me 44 years old - soon to be 45 in a couple of weeks).

I went into the Army when I was 17 years old. I went to radio school (Signal School) at Ft. Gordon (GA). My Army MOS (job title) was Radio Relay Operator (31M20).

Of course, none of this changes the arguments in my original message.

You don't *have* to assume that. John did cross-post his question to
a CB group and gave no call sign. Maybe that's a bit of a tip.

I have (1) EL519 New Tube for $18.00 (Magnoval made in Yugoslavia) (like 6KG6A)

I have (6) 12GB3 (New Old Stock) GE Tubes for $6.00 ea

I have (2) 12DQ6 NOS GE tubes for $8.00 ea

(I would take $50 shipped only if you take them all)

If anyone needs these, please respond by direct e-mail.

Thanks,

Charlie...

> Please, a real
> reference rather than your opinion.

I am using a real reference.

You can operate under extra class, but you cannot exceed your own
limit.

ie. 5 wpm JA license holders are permitted to operate 50W in JA so he
cannot exceed 50W limit in USA also. 5 wpm JA license holders are
permitted to operate on all HF bands except 30m, 20m, 17m so they
CAN operate on all HF bands except 30m, 20m and 17m within the extra
class limit + his own limit in his home country.

If JA license holders take the tests and get the US licenses (one of),
then the reciproprical agreement becomes void.

Please check everything before you blame others.

David copied the calls and the zones. What other location
information are you saying that David should have received to make
"real" contacts in the CQWWDX contest that he was asking about?

If you're implying that you tried to exchange QTH information on
every contact you must have been really popular :-(

Jim will probably already know that he can not to do that with his
Japanese license. To operate in the USA under an FCC reciprocal
permit, in addition to holding a license from a country with which
the USA has a reciprocal agreement, the applicant must must be:

1) A citizen of the country that issued the license (Japan), and
2) Not a citizen of the USA, regardless of 1 above, and
3) Never have been issued an FCC amateur radio license.

Since Jim say he holds a Tech+, this alone knock him out of the
running. But I'd guess that Jim is actually 0 for 3 on these rules.

REPLY...

Okay Larry, the first thing you have to do is get a license. You have two choices.

You can get a Novice license. This involves taking a written test and 5wpm morse code test.

Or you can get a Technician license. This involves taking two written tests, but there is no morse code requirement.

You can learn about both of these licenses, and the tests, by stopping by your local Radio Shack store and picking up a copy of the "Now You're Talking" book published by the American Radio Relay League (ARRL).

Another book, which I think is easier to use when studying for the tests, is "Technician No-Code Plus" by Gordon West (also available from Radio Shack).

Both of these books contain the actual test questions and answers for the Novice, and Technician, written tests. And both of these books will also explain what frequencies, modes, and radio capabilities, you can use when you get your new license.

If you are not good at self-study, many local radio clubs have classes for both of these licenses. Contact your local radio club to see what they have to offer in this regard.

When you have learned the content of these questions and answers, you are ready to take your tests. At that point, contact a local radio club and find out when they are going to have their next test session. They will tell you what you have to do for the tests.

Once you have successfully completed the testing you will get your license a short time later and you are ready to go on the air.

That's all there is to getting started in ham radio. Good luck.

Dwight Stewart

Mike, you still miss the point ... in our Constitution's concept of freedom and limitations on the scope of government intrusions into our lives and restrictions on our freedoms, whenever the government makes a regulation that restricts or limits freedom in any way, it MUST be justified. The burden is NOT on those who would wish more freedom, it is on the government to show that the institution or continuation of ANY restriction on freedom is both necessary and justified.

Granted, this principle has been raped severely by liberal social engineering policies like "affirmative action." etc.... but that does not justify extending it to Morse testing, just because you feel that Morse testing is a "good idea."

Actually, the example of "affirmative action" is pretty close to Morse testing. Both institute unwarranted policies of favoring one group of people over another
because of some characteristic that is irrelevant to their actual qualifications
in real-world terms.

"Affirmative action" rewards blacks and other minorities with preferences in hiring, promotion, access to educational opportunities, etc., based, not on their abilities or qualifications, but solely on their racial heritage. It often has resulted in more qualified candidates being discriminated against solely because they were not
"of color."

Our current amateur regulations likewise reward that minority (who show that they are willing to bow to the demands of the old guard and jump through the Morse hoop) with extra privileges that are denied to their less compliant brethren, even though those privileges have NO relation to Morse whatsoever and without any regard for the applicant's REAL qualifications to exercise those
non-Morse-related privileges. That sounds a lot like a "government-based give-away program" based on unwarranted preferences and privileges for a minority

(the beepers), and as such is a morally repugnant as discriminating against a more qualified job or college applicant just because he's "too white" to fill some arbitrary, unfair, race-based quota system.

I didn't think I needed to learn about American Lit when I was working
on my BS degree, but it was a requirement so I took it.

>Playing by the rules isn't the way to get the rules revised.

Playing by the rules has nothing to do with getting the rules revised.
There are plenty of coded hams who are working towards getting the
requirement eliminated.

Using your logic, people shouldn't obey the laws when they want to get
the laws revised (sounds like a recipe for anarchy).

The only "problem" with morse code testing, Carl, is that you're at the
wrong end of it. You don't like it, so you pay lip service to eliminating
it and replacing it with something that happens to favor you personally.

Its not really that new. I moved out of a sub-division here in Lincoln, NE twenty years ago (almost 21) because of ordinances in the covenants for the sub-division which prohibited any outside antennas. CB< HAM< TV<, all of them.

2468. morse code/broken microphone

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-09 00:00:00 UTC
From: John Frank <jfrank@mailbag.com>
Message-ID: <01bceca4$af040840$76b2adcd@jfrank.bind.net>
Source record: 187068

Several years ago, I was going to meet my wife (also a ham) after she finished school for the day. The plan was that we would communicate via 2 meter simplex to decide where to meet. Then, the microphone in my handheld rig stopped working. I started using the push to talk switch to send CW. She realized what I was doing and opened the squelch on her radio. Crude, but effective. We were able to communicate even though my microphone wasn't working. 73, N9CH

>unnecessary to enjoy Amateur Radio.

Please, get real here. The requirements must not be driven
by what is needed to ENJOY amateur radio...the requirements
must be driven by what SHOULD be mastered to safely operate
and/or construct an amateur station and to then operate that
station fully in accordance with FCC rules. To do so today
does NOT require any knowledge of morse...BUT it does
require electronic theory, safety aspects and regulations knowledge.

None of us are proposing an appliance operator only license and
unless that were to happen then every licensed ham is still free
to build and or modify any equipment for use in the ham bands.

>too.

For once, please get this straight. The nocode TEST folks have
no desire to have CW die off. We simply see no need to TEST for
CW anymore. Some of us even like and use CW, but that's a PERSONAL
choice. If CW dies off in time after the code testing ends, then
it will be because the Pro-Code faction let it die.

> It is as much a part of ham radio as repeater operation is. I personally
>think we would be well served to keep CW a part of the licensing
>requirements. The most compelling argument is to insure the amateur bands
>don't become like 11 meters.

Another tired old statement without any thought behind it.

11m (CB) = No license at all required

Ham (even w/o code) = License required, testing
includes theory, safety rules, FCC regulations, ettc.

If anyone can't see the difference in that then there's no hope
for their ability to understand anything.

I would like to know if there was a change of venue? Last time I checked, We in the United States used a different system, The Magna Carta granted the Aristocracy in the U.K. the right to a jury of Peers (ie, House of Peers, Peerage, members of the upper classes). Not that I am defending anyone here, but so many do not understand even the basics of our nations legal system. PS, the First Amendment gives anyone the right to disseminate " hateful " messages. Its too bad those few special interest groups so often the target of unpopular sentiments hold so much sway in government. Protect your spectrum, fight the dominant media, or they might just take away more of your bandwith.

Hello John,
I am not familiar with a 2830, so I have to assume that it's just
another all-mode, all band transceiver. And I will assume that it is
tube - not solid state - not that it will matter from my perspective.

Sorry that you are already in receipt of such a negative response from
Phil.

In my opinion the G5RV is a good antenna, even though it can be
difficult to match on 40 and 80 and downright recalcitrant on 30M.
However, I have always managed to tune one to a perfect match with a
roller inductor tuner. If you buy a tapped inductor tuner, I think
you're throwing your money away.

I've tried all kinds of verticals and there isn't but one that can
come close to a dipole or any other reasonable length wire antenna,
and that's my 80M vertical with 8 tuned counterpoise wires and top hat
loading with loading coil.

HOME AUDIO AMP (Needs repair) $65 or best offer

TOP LINE SANSUI G-5000 AM-FM HOME AUDIO AMP.

Was very expensive transistorized amp at one time.

METERS: Signal Meter & Tuning Meter

BUTTONS: Speakers A/B; Tone; Sub-sonic Filter; Audio Muting;
Loudness; FM Muting; Mode; Tape Monitor; 4 Channel
Line Adaptor, Source Tape.

KNOBS: Bass; Treble; Volume; Balance; Tuning; Selector of
Modes

MICROPHONE: Mic. Mixing Level Input; Input Phones/Mic.

This unit needs repair and is sold as is.

$65 or any reasonable cash offers considered.

Would consider a tube tester (Military or Civilian) in trade,
perhaps needing repair too.

Thanks.

Sounds like someone has installed the HM-56 mic on the 3200 A. The
HM-56 has 14 autodial memories with up to 22 characters each.
MW means memory write, MR means memory read and RD means redial.

75 Ohm cable is pretty much okay at HF, although the impedence mismatch may make your transmitter back down on power. All you need to do is put in a tuner and tune out the mismatch and you should be all set.
There may be antenna considerations as far as baluns go but I'm not too sure about them so I'm not going to tread there. Look in the antenna handbook or the Amateur Radio handbook and they'll tell you what you need to know.

Chuck,
The book "Now your talking" is what you need to pick up. It has been
revised as well. I think radio shack carries it as well as the ham stores but
make sure it the NEW edition with the RF safety info in it.

William:

Because the military doesn't want to spend the money on training
CW operators. Fortunately, the Amateur Radio Service doesn't
have that problem. Since MARS is staffed primarily by *military*
radio operators, this explains the ban on CW. I assure you it has
nothing to do with the efficiency or effectiveness of the mode
itself; although, admittedly, they have managed to increase their
costs dramatically by using new digital equipment. Funny how
that works...

>While we are asking questions..... ask the F.C.C. why they get requested to
>use the CW portions of the bands for voice communications during emergency
>situations.

Never heard anythng about this myself, but if it is happening, could
it be because the present HF SSB operators are so unruly that they
make it virtually impossible for present SSB spectrum to be used for
emergency communications?

>Also ask why Japan is increasing the number of hams faster than we are.
>What is their reason for success while we fail?

Don't have to ask...they have a no-code HF license! Sells a lot of
radios, sure, but, by all first-hand reports, their "no-code" HF bands
are virtually indistinguishable from CB from an operational standpoint.
Utter chaos.

>Get the answers to those questions, ask a few of your own, and then THINK.

OK, done. I vote we retain the status quo on Morse Code testing for
HF privileges.

Right. The MARS Director who ordered CW banned was a codeless tech.
Its pretty simple logic to see why CW was banned.

>While we are asking questions..... ask the F.C.C. why they get requested to
>use the CW portions of the bands for voice communications during emergency
>situations.

Probably the same reason why they get asked to relax band limits for the
different license classes.

>Also ask why Japan is increasing the number of hams faster than we are.
>What is their reason for success while we fail?

Because they include their CB radio service in the amateur licenses figures?

I already know the reciploprical agreement.

for JA license holders in USA:

One can operate within the extra license;

- one cannot exceed his own limit;

- in the case of no coder, the band is restricted to
above 30 MHz.

for JA license holders in Canada:

One can operate within the full privilege license (basic +
advanced + 12 wpm);

- one cannot exceed his own limit;

- no code, restricted to above 30 Mhz

- with 5 wpm JA, CW only in all HF bands, no
voice permitted in all HF bands.

In response to Larry, who says:
>I am still waiting for even one compelling reason for
>retaining the code test...

Quite easy to do. The issue has to do with easing of requirements, and there is not going to be a restoring of "tough" theory exams. And we all know what happens when you ease requirements into anything. We're seeing it right now, in ham radio, as foretold by Vic Clark in 1982. Add to that the fact that Morse is still in wide use, especially by the QRP community.

It is you, Larry, who wants change. So it's you who have to provide a compelling reason to drop the requirement.

Your question is meaningless due to the fact that cw is allowed
anywhere on any HF band; there are already voice operators operating
on CW frequencies.

While we are asking questions.... why are you posting this to .misc?
Note the "Followup To: rec.radio.amateur.policy" line in the header.

>Also ask why Japan is increasing the number of hams faster than we are.
>What is their reason for success while we fail?

Answer: Domestic communications only and 10W - sounds a lot like our
No-code HF band: CB; we have a lot more "no code HF'ers" than they do.

>Get the answers to those questions, ask a few of your own, and then THINK.

Got 'em, done so, been doin' it.

>If you are under age 75, in good mental health, and not on drugs, you will
>understand why those that make the rules need to be given a "boot to the
>head" and a more reasonable policy adopted.

Nope. YOU need to get an HF receiver and so you can hear just how popular
code is on the ham bands. It's the only mode all HF hams have in common
and it's the only mode in which a ham can build a transmitter for and be
on the air within just a few hours, communicating internationally.

73, Jeff KH2PZ / KH6
CW: *The* least common denominator for hams worldwide.

Deerfield Plantation, Richmond Grove, and Crescent.

All these are incorporated communities (towns) near Myrtle Beach (SC) that have an ordinance prohibiting outside antennas of ANY kind. Deerfield Plantation's ordinance specifically lists CB, HAM, and other radio antennas.

This IS a new trend that is quickly becoming common around the country. I also ran into a similar ordinance in a town near Orlando Florida a couple of years ago (I don't remember the name of the town because I did not stay there after I found out about the ordinance).

Just remember, it's HUMOR.....

WHO'S WHO IN HAM RADIO

ADVANCED:
Leaps tall buildings in a single bound;
Is more powerful than a locomotive;
Is faster than a speeding bullet;
Walks on water, and gives policy to GOD.

GENERAL:
Leaps short buildings in a single bound;
Is more powerful than a switch engine;
Is just as fast as a speeding bullet;
Walks on water if the sea is calm;
Talks with GOD.

CONDITIONAL:
Leaps short buildings with a running jump
AND favorable winds...
Is almost as powerful as a switch engine;
Is faster than a speeding BB;
Walks on water in an indoor swimming pool;
Talks with GOD if special request is
approved.

TECHNICIAN (Old):
Barely clears a Quonset hut;
Looses tug-of-war with a locomotive;
Can fire a speeding bullet;
Swims well;
Is occasionally addressed by GOD.

TECH-PLUS:
Runs into buildings;
Recognizes locomotive two out of three
times;
Is not issued ammunition;
Can stay afloat with a life preserver;
Talks to walls.

NOVICE:
Makes high marks on the wall when
trying to leap small buildings;
Is run over by locomotive;

Can sometimes handle a gun without inflicting self-injury;
Talks to animals.

TECH:
Falls over doorsteps when entering buildings;
Says, "Look at the choo-choo";
Wets himself with a water pistol;
Plays in mud puddles;
Mumbles to himself.

AMATEUR EXTRA:
Lifts buildings and walks under them;
Kicks locomotives off the track;
Catches speeding bullets in their teeth AND EATS THEM;
Freezes water with a single glance;
THEY ARE GOD!

Author Unknown; But rumor has it, that he has been demoted to 11 meters
and is now a CBer, he can occasionally be heard Eastbound and Down!

In addition...

NO CODE EXTRA:
Flaunts honorary degree in "Tall Building Jumping";
Exhibits powerful ulterior "Loco Motives";
Attempts to avoid speeding bullets;
Is able to "Pass Water", usually without difficulty
Denys the existence of GOD; Cohort of CBers

Temporary Operating Suffixes

General - /AG
Advanced - /AA
Extra - /AE
No Code Extra - /AH

A easy way to use any impedance coax with 50 ohm transmitters and antennas
is to cut the transmission line to be an electrical (or multiple) half
wave-length. This is easly found by l=(468/f)*VF where f= freq in Mhz,
VF=velocity factor of the coax and l= the lenght of a electrical wavelength.
I use Belden 9213 (75ohm .3db loss at 30mhz per 100') during my portable
contests efforts using this trick. Many hams use CATV 1/2 & 3/4" hardline
for long (>500') using this same method!

Right ON!!!!!
Also, Japan has to pay for local phone calls, unlike in the USA which is
one of the main reasons more people become hams there, to save phone
charges!

NO CODE SUCKS!
(I'm studying for my ham ticket now and wouldn't dream of becoming a no
code tech. I believe that I want to get my ham ticket the old fashon
way, EARN IT!!!! If you don't like the idea of code get the hell out of
the hobby! Perhaps you would like all types of tests to be lowered in
difficulty for you LAZY benefit.... like police exams, fire exams etc...
Get a life!!! *Who needs your kind on the ham bands anyway!!!!!?

Future Code PLUS ham

REPLY...

I have to agree with Roger on this one.

I am 40 years old. I have been interested in radio since I was a kid (my father was a radio operator for the Air Force - 30 years).

In 1970, I went into the Army as a Radio Relay Operator/31M (by the way, I did not have to know morse code to operate those military radios).

And I have had a long history of using CB radio (since 1976 / KBEO-0299).

The one thing that has kept me out of Ham Radio all those years was the morse code requirement. Perhaps I am lazy. But, I can also honestly say that I see no reason for the morse code requiremant.

I don't think my father knew morse code and he was an Air Force radio operator for 30 years. If the Air Force can communicate around the world in wartime without needing code, why do a bunch of guys sitting in their living rooms need code?

I did a tour with the Army as a radio operator and still don't know code. If the Army can communicate around the world in wartime without needing code, why do a bunch of ham operators sitting in their living rooms need code?

The (no-code) Technician License was a personal invitation for me to become a ham radio operator and just yesterday I passed my test to get my ticket. I doubt I will ever upgrade to a higher license (unless the code requirement is dropped for those licenses also).

Maybe when I am retired, and have the time to sit around learning code, I'll change my mind. When I do, I guess I'll join the old guys sitting around arguing for the code requirement. I doubt it, but who knows?

Dwight Stewart

Even more surprising is that I've been getting their catalogs for a
few months now, and they have *ALL* come via priority mail!

Source record: 187112

You know you're vintage when/if:

Your first new transmitter was manufactured in Council Bluffs.
You had an Astatic JT-30 in front of you.
You used a J-38 during your Morse sending test.
You know (of) Mary Jane Morris and C. B. Plummer
You used a PE-103 on your mobile rig.
You also used a Master-Mobile antenna.
Your VHF rig looked back at you with one green eye.
You know what the two green leads from the transformer are for.
You made the transition from the 80 to the 5Y3.
All your crystals had a big "PR" or "JAN" on them.
All the neat stuff ran off 28 volts DC.
You know what Jeeves' job description was.
You've ever seen Art Collins and Curt LeMay in the same room together.
You bought Greenlee's for $2.00 each.
You bought parts at B/A and/or Laugh-a-Lot Radio.
Your bug was made by Mr. McElroy
The only transistor you could buy was a CK-722.
Your first receiver was an S-38 or, if very lucky, a used S-40A.
QST would fit in your back pocket.
You know what that little mirror was for in the back of your ARC-5
transmitter.
Your pocket calculator was made of bamboo.
Your S-meter rested to the right when the set was turned off.
You made precision frequency measurements with an LM or a '221.
You know who Hogarth was.
Your new T17 cost $2.00 from Fair Radio
You scrounged your HB linear's bandswitch from a TU-6B.
The above ran a pair of VT-4C's.
You read Prof. Ostermon-Tor's first technical article.
Your MARS call began with A, AA, or AF.
Things were different on 75 and 20.

SO MUCH FOR INCENTIVE. I believe ham radio is less than it used to be because of the no code. Keep making things easier and not earned and people become more abusive.... Maybe we should lower the need for doctors to learn early medicine because it's no longer used or needed. It is needed. By the majority of Hams who WANT it. You don't want it... you are in the minority.

SB DX @ WW $OPDX.330
Ohio/Penn DX Bulletin No. 330

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 330
BID: $OPDX.330
November 10, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K3ZO, N4GN, N6RT, K8YSE, K9LA, K9VV, AH0W/OH2LVG, F6AJA, G3NOM, G3SXW, G4BUE & DX News Sheet, HB9HFN, HS0/G4UAV and ON4VT for the following DX information.

IMPORTANT NOTICE FROM EDITOR! It is a shame I have to go through this again, but BARF-80 BBS (Basic Amateur Radio Frequency) is NO (repeat NO) way connected or associated with the B.A.R.F. (Better Amateur Radio Federation). The same notice was issued several years back, but due to the numerous messages appearing on the UseNet groups dealing with B.A.R.F. and involving hatred towards individuals, this message is important to circulate before confusion between BARF-80 BBS and B.A.R.F. gets out of hand. PLEASE PASS THE WORD! There is NO ASSOCIATION OR CONNECTION.

4X, ISRAEL. Look for Cedric, HB9HZN, to be signing 4X/HB9HFN now until November 13th from Tel-Aviv. He is there on a business trip but plans to be active as much as possible during the evening. He will be taking an IC-706 w/Tuner and wires. QSL to his home call (bureau preferred) or direct to Cedric Baechler, Mettetlet 26, 1763 Granges-Paccot, Switzerland.

5T, MAURITANIA. Members of the International Amateur Radio Volunteers (IARV) led by Yoshi, JA1UT, and Toshi, JA8RUZ, are currently in Nouakchott to implement an aid project. This project will help in the setup of hospital/ambulance radio communications, assistance to UNICEF, and assistance to the Government with the famous Paris-Dakar Motor Rally. The main activity will take place between November 6-13th. They hope and expect to have the 5T5U licence reissued to them, but the operation may be supervised, so "pile-up" type operations may not be possible. Their operating times are subject to spare time. They will give an emphasis to CW on all bands including the WARC bands, excluding 1.8 MHz (check +30 kHz from the band edge, except for LF bands). They plan to operate on RTTY (on 14, 21, and possibly 7 MHz, frequency not yet decided). On SSB,

check 14185, 21285, 28585 and check PacketCluster spots for 7/3.8 MHz.
QSL to JA1UT.

5V, TOGO (Update). Roger, G3SXW, provided OPDX with the following update and reminder: "All arrangements are in place for the 5V7A expedition to Togo, to operate in the Multi-Multi category of CQ World-Wide CW Contest. Before the contest (November 26th to 28th) we will operate on contest bands, checking antennas. After, (December 1st to 4th) we will also operate WARC bands. Arrangements have now also been made to operate some RTTY. These operations (several simultaneous stations) will be with personal callsigns: 5V7A/G3SXW, 5V7ZM/G3ZEM, 5V7FA/G4FAM, 5V7RF/GM3YTS, 5V7VT/K5VT, 5V7PN/K7PN 5V7MF/KC7V, 5V7BG/N7BG, 5V7MB/N7MB and 5V7BV/W6RGG."
For more details check out the following WEB site:
http://www.getnet.com/~k7wx/5v7a.html

9A, CROATIA. Croatian club radio station 9A1CRD will be celebrating its 20th anniversary until December 31st, with special callsign 9A20D. All activity will be on 80-10 meters frequencies with operations on CW and SSB. QSL via 9A1CRD.

9Q ON SSTV! On Tuesday, November 4th, Peter/ON6TT made the first SSTV QSO ever from 9Q (Democratic Republic Congo) using the call 9Q2T. The first pictures from 9Q2T are already on WWW. Check ON4VT's WEB site at:
http://www.ping.be/on4vt/

A6, UNITED ARAB EMIRATES (Update). David, K3LP (ex AA6DC), will now be joined by Rich, KE3Q, for his November 22nd to December 2nd operation as A61AJ. Activity will be mostly CW and on the lower bands (watch their local sunset at 1327z). David (and probably Rich) will also be an entry in the CQWW CW Contest. QSL this operation only to K3LP.
Meanwhile, disaster hits A6 operators by a cyclone that hit Dubai at the end of October. "The DX News Sheet" reports A61AD lost his KT34XA, A61AN lost his 20m yagi, A61AO's yagi is now vertically polarised and partially damaged, but A61AQ's antennas survived.

EL, LIBERIA. "The 59(9) DXReport" states that Joe, K3KN, who has been active as EL/K3KN is now sporting his new EL2JR callsign. OPDX has found him to be active on some of the WARC bands. This past weekend he was heard on 30 meters between 0000 and 0530z and on 17 meters (around 18074 kHz) between 1930 and 2330z. QSL via KB3U.

FO, RIMATAR ISLAND (Postponed). Albert's (FO5JR) planned activity from this Polynesian island (IOTA OC-50) in December has been postponed due to the projected weather forecast. The forecast states a very bad and hard summer season and Albert wishes to stay at home. He will now try to be there next July.

HS0, THAILAND. Tony, HS0/G4UAV, announces that the Radio Amateur Society of Thailand is planning an all-out multi effort in the 1997 CQWW CW from its club station HS0AC at the Asian Institute of Technology near Bangkok Airport. SM3DYU and LA7JO are organizing the effort which will also include VK3DXI, E21CJN and EY8MM. However, they would like to have five

or six more operators to really make a full go of it. PERMISSION FOR THE OPERATION TO UTILIZE 80 AND 160 METERS HAS ALREADY BEEN OBTAINED. If you are interested, please contact Tony (quickly) at his E-mail address: tonyw@mozart.inet.co.th
Fred, K3ZO, added something to this annoucement which readers may find interesting: "Granted, this announcement is being made on very short notice. But consider the fact that Thailand, never an expensive tourist destination to start with, is now a real bargain with the dollar worth 60% more in the local currency than it was a few months ago. The Institute has a comfortable and inexpensive hotel right on the campus within easy walking distance of HS0AC. Persons flying in on that Thursday or Friday, from the U.S. at least, can often get special discounts because of it being the Thanksgiving holiday whereby most people have already arrived at their destinations. No visa need be obtained in advance in order to enter Thailand; you will be given a 30-day permit to stay in Thailand on arrival at the airport."

J2, DJIBOUTI. Jean, F6AJA, reports Dominique, J28DB (home callsign unknown), will be active for the next 3 years. QSL via F4AAQ.

J8. ST. VINCENT. "The 59(9) DXReport" states that Volkmar, DF2SS, will be active from here December 20th through January 20, 1998. No callsign was mentioned, but the "DX News Sheet" reports that their activity will included operations on 160 meters and RTTY.

JD, MINAMI TORISHIMA. Look for Take, JG8NQJ, to be active as JG8NQJ/JD1 from Marcus Island, starting November 25th, and lasting until February 20, 1998. He will be working at the meteorological station on the island. QSL via JA8CJY.

NH2, GUAM. Bill, NH6D, who lived in Honolulu and operated off and on from Midway last year, has permanently moved to Guam. He will be using the callsign NH2/NH6D. Over time, he will be more and more active on the low bands. QSL to his manager N6FF.

P4, ARUBA. Bob, K4UEE, will be active once again as P40R during the CQWW CW Contest as a Single/OP entry. QSL via NK4U.

QSL INFO AND NEWS.....
Tim, N4GN, reports that the OH0/N4GN and OJ0/N4GN DXpedition logs are now searchable at the following URL: http://www.iglou.com/n4gn/oj0/
He states, "Much of the original logs were on paper, so there are likely a few data entry errors. Please notify me of any discrepancies. Details regarding the QSL status are also available at this same URL, and will be updated as necessary. The bottom line now is that I expect to answer direct requests by the end of December. Please do not send second (or third!) requests before then. Tnx for your patience! 73, Tim Totten, n4gn@iglou.com....."

Doug, N6RT, wants to remind everyone that the FO8DX QSLs for 1997 CQWW SSB Contest go via KG6AR: Chris Williams, 1117 So. Del Mar Ave., San Gabriel, CA 91776-3034. He also mentions that their FO0 2x2

callsigns listed in the bulletins before the contest were never issued. Please remove them from any QSL info lists you see. All current visitor licenses are 2x3 FO0 callsigns with the suffix being the first three letters of your last name (or the closest unissued callsign). The following are the actual callsigns issued and their QSL routes:

FO5VO via N6VO, Ron Weaver, 13691 Solitaire, Irvine, CA 92720
FO0BRD via N6RT (ex-NF6H), Doug Brandon, 712 Stardust Drive,
Placentia, CA 92870-4507
FO0KEO via KA7CQQ, John Kennon, P O Box 31553, Laughlin, NV 89029
FO0MIT via W6RW (ex-N6NU), Mike Mitchell, 5271 Turquoise Ave,
Alta Loma, CA 91701
FO0PLA via W8AEF, Paul Playford, 35639 N 3rd St, Phoenix, AZ
85027-7405
FO0SPE via KG6AR (see above address - op. W6KK)

"Please be patient as it will take a month or so to develop film and get QSLs printed..... 73 de Doug, N6RT"

TI, COSTA RICA. Fred, K9VV, reports to OPDX that through the courtesy of TI5KD, the contest call of TI5N will be used as a Multi/Single in the CQWW CW Contest. The operators will be K6CT, K9VV, TI2CCC and TI2OY. QSL via TI5KD.

XF3, ROQUETA ISLAND (Mexico). A group of Mexican operators will activate NA-183 located in the Guerrero State Group from 2100z November 21st, to 2100z November 23rd. Operators will sign: XF3/XE3HLR, XF3/XE3AD, XF3/XE3LYC, XF3/XE3LBT, XF3/XE1K and XF3/XE3LMV. Activity will be on 160-6 meter and RS-12/13. QSL via XE3LMV.

XU, KAMPUCHEA (CAMBODIA) (Sad Note). OPDX is sad to report that Mike, W0YZS, who many have worked as XU6WV, became a Silent Key (SK) on October 27th in Kampuchea. Mike was also noted for his activities as VR2WV, VS6WV, SV0FE, SV0FE/SV5 and SV0FE/SV9. OPDX sends our deepest sympathy to the family.

ZF, CAYMAN ISLANDS. Look for ZF1A as a Multi/Single entry in the CQWW CW Contest. The following operators will activate ZF1A and will be active outside the contest: Dan K1TO/ZF2??, Bob K4UVT/ZF2RF, Joe W5ASP/ZF2NE, Mike K9MK/ZF2MK, and Carl K9LA/ZF2LA. QSLs for ZF1A QSOs go to K9LA. QSLs for QSOs outside the contest period go to the respective home call. For more details visit their WEB site at: http://members.aol.com/k4uvt/ZF1A.htm.

Subject: [CQ-Contest] Sunspot Cycle
Message-ID: <199711081915.KAA25243@calvino.alaska.net>

>From the December issue of Sky & Telescope, pg 112:

"Patrick McIntosh of Heliosynoptics, Inc., and Pierre Cugnon of the
Sunspot
Index Data Center find the September increase (of sunspots) 'very
significant'. Furthermore, McIntosh notes that in September the Sun's
10.7
centimeter radio flux experienced the greatest monthly increase in the
half
century it has been recorded. 'This dramatic jump in activity,' he
writes,
'adds considerable credence to predictions that the current solar cycle
might equal the greatest one on record, Cycle 19, which peaked in
1957-58.' "

Go Sol, Go Big Fellah!

Bodes well for the 10 meter contest in the next few years....

Dammit, Carl, if you can't keep your anti-Morse tirades confined to
the proper newsgroup, I'm going to have to killfile you. I don't want
to do that, because you occasionally offer something worth reading.
It's just not worth my time wading through ten or twenty of your
redundant insults every day looking for that nugget, however.

Give it a rest in rram and rradm, willya? And tone down the insults
in the _on topic_. It's getting really old.

You are showing your ignorance here, Michael. CW tests were not
always given by Multiple Guess methods. I don't believe all examiners
use those methods even now. None of my CW tests were of that sort.
Only ONE of them was even "fill in the blank (exactly)." The others
were one minute "solid copy" out of a five minute test. Judging by
Roger's call sign, I'd guess he took a similar test.

> You may view their official statement at this location:
> http://www.radia1.com/pms21/

Personally, I could care less what BARF or KD4CDB put on their
web sites. While I think they are borderline kooks and quite
distasteful, I am not forced to read their drivel. Radia1,
by their action, has elevated the importance of these people,
and made "martyrs" of them. They should have simply been
ignored. Now they will just pop up elsewhere with additional
fringe-credibility because "the establishment is against them".

Unless the material posted violated some law, I have a considerable
problem with an ISP who decides to regulate internet content. They
do business in the USA, not some right-wing dictatorship with
censorship of unpopular views.

I also view with some suspicion unidentified groups hiding
behind phony high-sounding titles such as "TRUTH.ORG". Scary,
really scary, and makes you wonder what secret agenda they have
which causes them to cloak themselves in such secretive terms. The
membership of BARF, controversial as it may be, at least has the
courage to identify itself.

Finally, I wonder why 9 or more identical copies of your message
were posted to a single newgroup, rec.radio.amateur.misc. Did
you also fly an old C47 over Atlanta and drop out leaflets?

Just my personal opinions.

No, the problem is that it is outdated and causes many undesirable negative
effects in ham radio and in terms of ham radio's prospects for future survival.

> You don't like it, so you pay lip service to eliminating
> it and replacing it with something that happens to favor you personally.

Which would be technical testing ... which seems to offend you for the
apparent reason that that would put you at a distinct disadvantage, I take it?

Tony ... read the ITU regulations description of the "Basis and Purpose"
of amateur radio ... its FOR experimentation, building, tinkering, and
inventing ... NOWHERE does it say word one about DXing, contesting, or
any of the other inane "gamer" activities that have come to pervert ham
radio over the past few decades ... that's the point ... if you have to
ask "What's so special about 'building radios'?" you haven't a clue what
ham radio is *supposed* to be about ...

Mike, that's absurd ... you pro-coders are the ones who are intent
on keeping out as many people as possible. The rest of us would be
happy to see significant growth as long as applicants are reasonably
qualified (which doesn't mean an EE degree and doesn't require Morse).

> >>physically located.
Not sure of the tecnology of the Inmarsat,but if it uses one of those
parabolic antennas that require you to "wave" the antenna at the sky to
find the carrier of the satelitte,unless you are above the sat-phone
transmitter-in the beam-I think it would be very difficult as most of
the energy is directed up,not around.This does not mean impossible,just
unlikley.Prices on those badboys are dropping,a few months ago they were
around 4500 bucks with airtime i think around 10 bucks a minute.When
Irridium is unveiled in the near future,a phone the size of a handheld
cellphone will do the same thing.....

Hi, Don:
IMHO, from the tone of your post, I don't think the ham bands need
anyone of your caliber either. Their is room for all: Amateur Radio
is not an exclusive club lorded over by elitist dictators (though some
would have us believe that is the way it is and the way it should be).
And Amateur Radio is not about "earning" -- anything. If you believe
those things, then, IMHAPO, if there is anyone who needs to "get a
life," especially when it comes to enjoying Amateur Radio, sharing
this planet and getting along with others, it is yourself.

Have Heathkit hw101 for sale, also hp 23 pwr. supply in other posting...
101 is in rather good cosmetic shape. Face is decent, case good, having
a few blemishes, no dents, large scratches, etc. Rig seems to be
complete, but sadly, it needs het. osc. boards..(well, not really the
boards, but the tuning slugs/cavities all seem to be cracked, split,
missing, etc). The drive control has come loose and will slide right out
(sorry, I pulled on it, was working ok!) missing one rubber foot, needs
new dial disc, powers up ok, can hear some stations barely on 80, so it
does kinda work, has finals, etc. What's it worth? $40.00?
Reply via email,
Thanks!

Source record: 186935

Hi Gang!

Great news! We are moving to a new Server this week!

Thanks to the fine folks at QSL.net, we have a new home for "The KB8TNQ Ultimate Amateur Radio Page".....and while my reasons for this move are of a personal nature, you won't see any lag in the features of this Site.

Additionally, we are moving the Central Michigan Amateur Radio Club Site, too. The Board of CMARC graciously approved my request to move this Site, making it easy to update BOTH Sites at the same time, on one server.

QSL is a completely Amateur server, so you'll have fun checking out the multitude of other web pages they host, while you're checking ours out. My personal Site will be done by Wednesday of this week (11/10) and CMARC's by Friday (11/12)

Make sure you tell your friends about this and we'd like to thank Dan (KB8UYZ) for hosting these Sites, to this point.

7-3,
Erv KB8TNQ

Hi,

I have a Heathkit HP 23 power supply for sale. Works great, has switches for pwr off/on, dual voltage and pwr on lamp. In very good cosmetic condition as well. Only a few blemishes but has some 'labelmaker tape' identifying the voltages switch. Mostly just glue marks from tape, etc. Have 'homebrew' pwr. cord for HW 101... pretty rough and not well made, but has proper connectors. will go with first piece of equip out the door. See HW101 posting! Want both maybe?? Reasonable offers considered and uship! reply via email.
thanks,

Since when do police and fire exams require morse code?! I guess they
DID lower the difficulty for "lazy" officers by not making it a
requirement! How interesting that it is EASIER to become a police
officer than a hobbiest!!

Yep. That's part of what got me interested in Ham Radio. That was
over 25 years ago. WA6GVG and W7DVJ. DVJ got killed in a car
accident, I believe. Wonder whatever happened to ol' Ralph?

This can be fixed. It's not difficult building for VHF-Microwaves, it's just different. Components are just as available, and you can also get Ex PMR sets to rip apart or modify. You can build your own test equipment or buy surplus, prices are not significantly higher. I bought a Marconi 2008 signal generator (10kHz-520MHz with comprehensive modulation and sweep facilities) for 80 pounds in non-working order. The dial pointer cord had come off of one pulley and jammed, anyone could have fixed it. I bought a pair of brand new HP power meter heads (10MHz to 10GHz) at a stall at the Kelso rally for 50 pence (someone didn't know what they were amongst a pile of Nato labelled surplus junk. There are bargains to be had, it takes time and a bit of knowledge.

I think you have found the real cause of the lower amount of homebrewing on higher frequencies in the lack of material in magazines.

Your multimeter example is interesting, a basic multimeter can no more measure HF RF than it can measure VHF RF, so the difference must be in the availability of designs amenable to basic test equipment, rather than anything implicit in the frequency band. A diode RF detector can be built just as easily for VHF as HF.

On HF, most of the devices used have appreciable gain to UHF, so now even HF stull needs VHF-style layout. Not to make it work on HF, but to prevent VHF/UHF oscillation. Learning about UHF style layout is an important part of doing HF design ;-)

> Thus I think it would make more sense to open HF up to
> more licensees, possibly only certain sections and with, say,
> QRP power limits, but this would allow people to experience

> homebrew in the easy part of the em spectrum rather than
> blunting their teeth on 2m SSB or just buying a 2m FM rig.
>

Maybe it's just too easy to buy a 2m FM rig? and the magazine
editors see no value in publishing anything basic for VHF?

It seems like there's a market for a really good 2m design that
would offer some reward to the builder that couldn't be matched by
anything that could simply be bought. Perhaps a high performance though
cheap mode specific exciter/receiver for the moonbounce of satellite
brigade, or maybe an FM unit that has a strong front end and excellent
audio?

Cheers
David GM4ZNX

If it is so practical, effective, efficient, and universal, why is Amateur Radio the only radio service that still has a code licensing requirement? No other radio service in the United States has a code licensing requirement.

Closed Circuit Advisory

According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation.

As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you.

If we lose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P. O. Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1056, for release on Friday, November 7, 1997 to follow.

<*>

The following is a QST

Sputnik 40 is in orbit and hams around the world are in love! This story and more on Newsline report number 1056 coming your way right now!

<*>

Sputnik 40 Is in Orbit

Ham radio operators around the world have fallen in love. What they are in love with is this:

"beep-beep-beep" Sputnik 40

That's the sound of what the words press corps has dubbed Sputnik 40. A scaled down replica of the first man-made satellite to be launched by into orbit by Russia forty years ago.

Sputnik 40 was a student project. Two identical satellites were assembled by students in Russia. French students provided 2 meter transmitters. Both satellites were then carried to the Mir space station last month by a Progress supply rocket. One was manually placed into orbit during a space walk on Monday, November 3rd.

While Sputnik 40 may look like a tiny version of the original, it is actually of far more modern design. Its electronics utilize the latest solid state and it operates in the 2 meter ham band at 145.825 MHZ FM running 200 milliwatts of power. The original Sputnik launched in October 4th, 1957 had two transmitters. One operated near 20 MHZ and the other just above 40 MHZ. The beep-beep sound of the new Sputnik is calculated at 1288 Hertz.

Program sponsors initially intended to have the working Sputnik model in orbit by October 4th. That was the 40th anniversary of the launch of the original Sputnik 1 satellite.

Why have hams worldwide fallen in love with the chirping sound of this replica Sputnik? Some say its because it brings back memories of their youth. The days when they huddled around shortwave receivers with glowing dials waiting for Sputnik 1 to pop out of the noise.

There are also the hams who were born long after Sputnik 1 had gone silent and fallen from orbit. They never heard those first man-made sounds from space. For them it is a chance to live a moment that they never thought possible. For some its also a chance to bring their handheld 2 meter radio into class and share the present and the past with their teachers and schoolmates.

Sputnik 40 has an estimated battery life of about 30 days. More information on Sputnik 40 is available at websites worldwide. We will be posting links to them from our website at:

www.arnewsline.org

We also thank many of the subscribers to the AMSAT North America Bulletin Board who contributed to this story.

Ham License Fee Going up in '98

The cost of taking a ham radio exam is going up again in 1998. The FCC has announced that effective next January 1st the maximum allowable reimbursement fee for an amateur operator license examination will be $6.39.

By way of background, the 1998 exam fee amount is based upon a 2.2% increase in the Department of Labor Consumer Price Index between September, 1996, and September, 1997.

Volunteer examiners and volunteer examiner coordinators may charge examinees for out of pocket expenses incurred in coordinating Amateur Radio examinations. The amount of any such fee from any one examinee for any one examination session, regardless of the number of exam elements administered, must not exceed the maximum allowable fee. Where the VEs and the VEC both desire reimbursement, they jointly decide upon a fair distribution of the fee.

Again, starting on January 1st of 1998 the fee for taking a ham radio examination will be $6.39.

(Via FCC, W6NW)

<*>

Federal Bailout

The FCC, word that federal regulators have approved a government bailout for companies that bid on wireless phone licenses, but can't find the money to pay for them. Winners in an airwaves auction reserved for small businesses last year pledged $10.2 billion for licenses for the next generation of wireless communications known as PCS. But some of them later said they couldn't pay for the new mobile phone licenses and asked the FCC for relief.

(Via FCC)

<*>

Kennard New Fcc Chairman

William Kennard has been confirmed as the new chairman of the Federal Communications Commission. Kennard won his confirmation on October 29th. His confirmation was preceded by voice-vote approval the night of October 28th of three other commission nominees. They are Michael Powell, coming from the Justice Department's antitrust division; Harold Furchtgott-Roth,

an economist with the House Commerce Committee; and Gloria Tristani a New Mexico state utilities regulator.

(Via FCC)

<*>

Numbers Correction

A correction on a number we gave you in last weeks newscast. We said that the number of runners participating in the New York City Marathon was 4000. That number was actually closer to 40,000. It appears as if we accidentally dropped the least -- or in this case -- the most significant digit.

(Via Newsline)

<*>

Great Plains Snow Storm Follow-up

A follow up to our story last week about the snow storm that hit the Rocky Mountain and Great Plains states. We now have information on what hams did to assist during and after the severe weather.

According to Mary Joseph N0TRK members of Nebraska's Midlands Amateur Radio Emergency Service, Sarpy County Amateur Radio Emergency Service and Cass County Amateur Radio Emergency Service were called into service to provide backup communications to the Nebraska Army National Guard, This during clean-up efforts in the wake of the snowstorm.

The Amateur Radio Emergency Service supplied backup communications to all cleanup missions in Douglas, Sarpy and Cass Counties. ARES also supported clean up missions spread into other counties as well.

During the clean-up, the Army National Guard used ARES support to relay progress reports, equipment requirements, logistics information and health and welfare information of the soldiers in the field. The teaming up of Army National Guard radios, cellular phones and amateur radio has provided the Guard with reliable communications throughout the hard hit areas of Nebraska.

The city of Ralston also requested ARES support during their volunteer clean-up on Saturday, November 1st. Several ham radio operators were placed with the clean-up crews allowing city officials to track the location of the crews and their progress.

(Via N0TRK)

<*>

Amateurs Participate in Nuke Drill

Call it shades of Three Mile Island. That, when members of Orange County New York ARES and RACES participated in a radiological reception center drill at Cornwall Hospital on Wednesday, October 22.

According to Steve Fleckenstein, N2UBP, the drill simulated the handling of radiation injures from the Indian Point nuclear power facilities. Two meter mobile and hand held transceivers were used on the 146.76 Middletown and 146.435 Newburgh repeaters to communicate and to help simulate ambulance logistics.

(Via Hudson Division Loop)

<*>

Endurance in Emergency Comms

If you're a ham radio operator active in emergency communications, you know that being ready to respond quickly is important. But fast response isn't all that hams have to be ready to provide. As Newsline's David Black, KB4KCH, reports, hams in Alabama learned recently about something equally important: endurance.

The sounds of radio amateurs in north Alabama exchanging storm reports with hams at the National Weather Service in Birmingham. It's October 25th, a day of severe storms that are pounding much of the state. When Weather Service forecasters asked for hams to respond, the first net controls were on the air by mid-morning. Tornado and severe thunderstorm warnings were scattered across the state. Radio amateurs pride themselves on helping as long as there's a need. This time, the need went on and on as more severe weather watches were issued. Well past midnight, spotter groups and net controls throughout the state remained on the air. Through the switch from Daylight Savings time to Standard time, adding another hour. When the all clear was given, hams left the Weather Service forecast office after being on the air for more than 24 hours straight, setting what's believed to be a record for hams in central Alabama.

Brian Peters, WD4EPR, is a Weather Service meteorologist:

"the amateurs and ham radio people that responded, responded superbly. There is no doubt that it taxed everybody quite a lot to have such a long episode. Long episodes are common though. And we will have them again. But I think that the first one, this has been absolutely wonderful to have the hams there and to be as dependable as they were and to provide as much help as they did. It was great." WD4EPR

Six, eight, even twelve hour long severe weather outbreaks are common for hams in Alabama. But the last weekend of October may be an indication of things to come. Forecasters say long duration weather events are a good bet in the spring, leaving amateurs with the prospect of more long nights ahead.

This is a busy time for Alabama hams. The Weather Service plans to close its Huntsville Office December 2nd. The closing means that hams in the northern part of the state will have to relay their reports to the Birmingham Forecast Office, nearly 80 miles away. As a result, spotter groups in both areas have been working closely with each other to insure a smooth transition.

(Via Newsline)

<*>

Harlan Technologies Is New ATV Quarterly Publisher

In the business arena, word that Publisher Henry Ruh, KB9FO has sold Amateur Television Quarterly to Harlan Technologies. Harlan took over ATVQ on October 17th and is now playing catch-up on the publication dates.

According to the new publisher Gene Harlan, WB9MMM, the long delayed Summer 97 issue will be out about November 1, followed by the Fall 97 issue around December 1. Harlan says that he expects those dates will help him put ATVQ be back on schedule.

For more information on ATVQ, contact:

Harlan Technologies

SWOT Norcal to Meet

The Norcal chapter of Sindwinders on Two -- better known as SWOT are gathering on December 6th at the Bakersquare in West Sacramento, California. All members of the "Weak Signal" clan are invited.

(Via SWOT)

<*>

DX

Lots of DX news this week. Start by looking for the Palo Alto Amateur Radio Association to be on the air November 8th in celebration of the clubs 6th anniversary. Operation will be on SSB in the General Class portion of the 40 through 10 meter bands using the club callsign W6OTX. Contacts on the air will earn Commemorative Certificates.

The International Amateur Radio Club in Geneva is operating 4U1ITU under the call sign 4U1WRC to mark the Radiocommunication Assembly and the World Radiocommunication Conference. A commemorative QSL card will be available for contacts between October 20 and November 21, 1997. 4U1WRC will be operational in all modes, including PACTOR and CLOVER.

The First China-North America EME QSO has taken place. BY1QH was on 144 MHZ EME on October 25 and worked KB8RQ for the first ever China to North America EME contact. BY1QH also worked W5UN.

CO2OJ reports that on October 23rd he almost worked YS1ECB, in San Salvador on 6 meters. Oscar says that when he first heard YS1ECB the signal was a solid 5 by 5. Unfortunately, the San Salvador signal faded down and disappeared before a two way contact could be made.

(Via various DX news sources)

<*>

Hamming at 100

A happy 100th birthday to George Wilson, W7HF, of Aberdeen, Washington. Wilson celebrated his 100th birthday on November 1st. Best of all is that Grays Harbour Amateur Radio Club member Frank Volz, KA7DNK, reports that Wilson is still active on the high frequency bands. This George Wilson -- not to be confused with former a former ARRL President having the same name -- has been a League member since 1934.

REPLY...

Great, now I can't even remember the date of my own birthday. That is supposed to read November 27, 1953.

Yes both of my accounts were cancelled be cause the individual who keeps making these posts (N3CND,dirtball@dirtball.com) and wb2otk and w2zb and all these other morons in this group called these services hundreds of times daily. These individuals are truth manipulators,that is all they do. They do not work,they do not have lives. They just terrorize people on the radio. If you would like to see all this anon crossposting stop,send an e-mail to dirtball@dirtball.com or postmaster@negia.net. N3CND has made terroristic threats,e-mail bombs,false posts with this address,you name it. I am in the process of criminal charges against this individual(over200 felonies in 3 weeks) and hopefully that will stop this mess. Good Luck with this moron.

The reason for code was because it could get through where voice, fm, whatever, would be unintelligible. It works great when almost all other modes are not useable. BUT the main reason I can see for keeping the code is to keep the amateur bands from becoming another Citizens Band. BTW I am a no code tech. Not by choice. I have a slight problem with detecting the tone shifts to the point that I cannot accurately copy code. However, I do not demand they do away with code so I can use the freq's. If you don't learn the code, just stay where you don't need it. See you on 6 meters.

Quite true. I had assumed that the knowledge involved in getting on
the HF bands was deemed to be worth having by the particular person
concerned, and so although not a closed set, as you so rightly point
out, it was nevertheless that that person was applying, rather than
the complete alternatives that you mention.

A cynic might say that having a Morse requirement - that is, adding a
difficulty level to getting on the HF bands - acts to discourage some
(actually quite a lot, judging by the postings in this thread), and so
makes "administration" of the bands easier.

Hello Ted!
Me thinks thou hast missed the boat by about 12+ years!
I used to live in Vineland, and when Cable-TV was coming in hot and
furious, I decided to ride around the area, check for TV towers by a
house that had the familiar Cable line going into it, and 'offer' to
dismantle their obsolete tower for them for no charge! I believe I
acquired over 30 towers like that! Which I then sold to people up here
in No. Jersey. Around the Middlesex/Union Counties areas.
Yepper.....I made big bucks those 2 years!
Try doing what I did. There may be some left.
Regards,
Brian

>cellphone will do the same thing.....

The Imarsat technology does not allow location of individual phones
very precisely. It knows what spot beam you're in, but that's still
several hundred square miles. Conventional DFing on the ground
is difficult due to the directional nature of the signal as noted above.

But Iridium, that's a different matter. It should be able to locate
a phone on the ground to within a few hundred feet using the
same technique used by SARSAT.

Jeff,

A couple of points:

1) The alleged quote does not exist at the site referenced.
2) Even if it did, it was almost certainly out of context.
3) You obviously have *no clue* who Phil Karn is! He is one of
the most prolific contemporary technical contributors to the
amateur radio service.

I went into the military in 1973. Sometime around 1981 they recalculated the skill qualification exam scores giving me and everyone else higher scores. Tell me that ain't lowering standards.

In the particular field I was in, it was obvious scores were substandard. The washout rate was tremendous.

As far as standards being lowered in Amateur Radio, that happened when the question pools were published and VEC's formed. Not that there is any major problem with current VEC's, they are very respectable.

Anyone can learn the code if they put their mind to it. Those pro-no-coders spouting off about how the garbage on 3853 et.al, including 20m freqs is filled with errant ops try to make their point that cw is not a lid filter and they are correct. But, since the publishing of question pools the lid population has increased immensly. I have no statisics to post here but listening now and remembering then and comparing the two....it seems more widespread now than ever.

The Marconi was a good buy for the price but here at my local 2nd hand test
equipment store they charge 250-350 quid for a 2008. The HP heads were a
steal though, I presume they're '478 heads (for a HP432 meter). Got a spare
one to sell :-)? However, it takes more luck than knowledge. And a lot of
time... (just been to Barnsley where they were asking silly money for Marconi
equipment which seemed to date from the Napolionic Wars! :-)

No, but because the layout requirements tend to be more relaxed (although I acknowledge your comments below) this makes construction easier, as well as the existance of good quality ICs (SL6440, now obsolete alas!) which simplify front-end design.

If the use of code in an emergency is the logic behind retaining the
requirement then it is a losing cause. If the code requirement is
supposed to keep out the "CBer" mentality - it's too late. If the
code requirement is being upheld due to tradition - the tradition is
doomed to death. I am, believe it or not, not against a code
requirement. I just don't see that the pro-coders have made their
point. I was pleased to see you put forth your view without a load of
name calling and immaturity. I tip my hat.

Subscribers/Newsletter editors, please take note:

~~~~~~~~~
ARRL Lab Supervisor Ed Hare, W1RFI, made a mathematical error in our report "FCC Sets RF Safety Evaluation Threshold for Repeaters" in The ARRL Letter, Vol 16, No 44 (he really does know better!). Here is the correct calculation for determining ERP: It*s fairly simple to calculate ERP. Take the PEP input to the antenna and multiply it by the numerical equivalent of the antenna gain in dBd (dB relative to a halfwave dipole in free space). Gain relative to an isotropic radiator (a point source), dBi, can be converted to dBd by subtracting 2.15 dB from the dBi number. For example, say your repeater puts out 100 W and has 3 dB of feedline loss. Calculate: 100 x 0.5 = 50 W to the antenna. The antenna has 8.8 dBd of gain, or 5.59 as a decimal. So the ERP is 50 x 7.59 = 379.5 W.

~~~~~~~~~

We apologize for any inconvenience.

: Well Bill,
: That calculation may may be close for your electric range, but I have
: yet to see an amplifier that is 100% efficient.

Yeah, but... In neighborhoods where houses were built with electric heat,
and gas came through later, like mine, many houses have excess electric service
capacity. Mine has a 400 amp service, and no longer uses the 2*60A @ 240V
that fed the 20kW electric furnace; nor does it use the power that fed the
electric hot water heater. But...I'll bet most 10kW output amplifiers have
3-phase power input, and that would be a serious problem in residential
areas.

(Me?? I'd much rather use simple, low power equipment and get
satisfaction from operating skill and effective but simple antennas.)

2572. Ham radio - how can I help its future?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-10 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <647pcr$kn2$1@w3eax.umd.edu>
Source record: 186970
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I was recently asked if, given my age (28), if I were 17 today, would I still be interested in ham radio as I was 13 years ago?

Would I not be more interested in the Internet, cell phones, and PCs than ham radio?

Do amateur radio applicants know anything about the internet?

Actually, YES, I would still get into ham radio. Why?

I had computers. Commodore Pet, Apple II, IBM PC - sitting in my own home. Modems were OK, and I liked to program. I still do.

Cell phones replace telephones. I know many, many, MANY hams with pagers, cell phones, whatever. Many hams I know who do weak-signal VHF from mountaintops take their cell phones with them so that they can arrange immediate schedules when they sense band openings.

As a Volunteer Examiner for the last 10+ years, I can honestly say that people studying for amateur radio exams - WHATEVER license class - are generally some pretty bright bulbs.

As for the folks I've gotten into ham radio, MANY of them have contacted ME via Internet as their first foray, not the other way around.

Were it not for the Internet, we couldn't be communicating as we are now. Note, however, the topic of discussion.

HAM RADIO.

We're not talking computers, art, food, or fashion. It's what we STARTED doing years and years ago, and continue to do!

If someone even hears of "ham radio," that person might check out a search engine for "ham radio." That's one of my favorite ways of learning new things...a powerful tool...

Remember the double-edged sword, though:

YOU and WHAT YOU SAY are WHAT THEY SEE. Think of that.

So would I get into ham radio? Of COURSE, assuming someone was there to show it to me.

Radio is different. I went to a local ham's house (he worked with my father), and had 2m FM and 40m DX CW (to Siberia) demonstrated to me.

I had had a shortwave receiver (an old Knight-kit) from 1960 since I was seven. I listened to Radio Australia every Sunday morning. I bought a used CB at a yard sale and got an antenna. It was OK, but WOW, that language!

Anyway, having gotten fed up with CB, dad introduced me to ham radio. He's 58 and never did get licensed, no matter how hard I've pushed (and he's been ready to pass the exams since age 14, although living in Brooklyn he had no money, thus no equipment, thus no chance to operate, thus no point in getting licensed bcz you HAD to prove you were operating in order to upgrade).

A professional, given no code requirement, will suddenly become a ham.

BZZZTTTTT!

Gave dad an informal CW test last year - he would have passed 5 wpm with ease even though he hasn't looked at it or heard any Morse (other than mine) in 40+ years. 35 yeard of on-the-job engineering experience and I think a written exam would be no problem. He would have lots to give, but he's JUST NOT INTERESTED. Were he, he would have been a ham long ago.

Thus with all the other distractions, ham radio was still very, very cool. I got to experiment "outside the box," setting up a RADIO STATION, talking to people ALL OVER THE PLANET on nothing more than what I had assembled. Today, I'd have learned of it via the net.

Way cool.

As for the future:

If people would pull their noses away from the screen for just a minute, they might realize what they've got access to with just a little effort.

I'm teaching a few kids on my street - their test is next Saturday. They're 14, and soak it up like a sponge. My club (Laurel, MD) is teaching a class - advertised as a no-code-Tech class - and from minimal publicity, we got 26 people who started. With 2 weeks left (of 10), there are still 21 people in there. Half of the people in the class are under the age of 40. Five of them are under the age of 16.

What's amazing is that it's a no-code class, and I offered to teach code. and got a total of NINE people who took me up on it. So much for a lack of interest, eh? Those nine range in age from 8 to about 70.

WHAT CAN I DO ABOUT IT?

Radio is EVERYwhere, and is a VERY technical pursuit combining physics, engineering, construction techniques, metalworking, soldering, weather, and mathematics. It's also about geography, psychology, and sociology.

On top of that, add public service and communications skills.

It is one of the most relevant hobbies/services you will ever find, anywhere, ESPECIALLY for kids (as I once was). On top of that, the concept of communicating via the ionosphere is as cool to them as it was/is to me.

How well do you publicize? Advertise? Are you willing to go that extra mile to make it known what we've got here? Once people know the facts, they can THEN and ONLY THEN make a rational, educated decision as to whether radio is for them or not. The problem is that it comes down to the PERSONAL efforts of EACH of us.

Are you willing to take that responsibility? That's what it will take.

If "SOMEONE" will show them, why not make it be YOU?

In response to Carl Stevenson,
No, it is you who is wrong, Carl, all the way.
Whether this or that is arbitrary, etc. ain't going to
be determined by the government. For if they do make
a determination, then they will be forced to determine
that understanding the theory of electronics ain't
necessary. You've admitted yourself, many times, that
the typical ham just doesn't cut it today, just from
the electronics fundamentals standpoint. That, my
friend, is proof positive that understanding electronics
theory just ain't necessary to hold a ham ticket. Or
to say it another way, knowledge of theory is an arbitrary
requirement.

The ball's in your court.

From: Neal Feldman <thanatos@cyberis.net>
Message-ID: <34679A44.27D9@cyberis.net>
Source record: 186975

My question is why try and remove code requirements? Why dumb down the hobby? Some people take to code like a fish to water and some have to fight with it... same goes with the theory part. If the code requirement 'keeps people out' of the hobby, then I would say that the theory requirements do as well. Face it... if we are just dealing with that which is absolutely necessary most hams today are just appliance operators anyway... they hook up their laptop or desktop to the TNC to the radio to the antenna, all store bought and maybe even store installed... and really have little clue how it all works or why... and they certainly could not have designed and constructed the equipment themselves... and what do they do when it stops working? Fix it themselves? Nope... they send it back to the factory or to a repair tech to fix it.

So neither argument really holds water to me...

I say it has been this way... the entire hobby is primarily tradition... and since the main remaining use for ham radio outside some emergency measures is to foster international goodwill I will point out that most nations on the planet do not have people who have laptops, TNCs, high tech rigs etc... and many build their own... what do they build? The first rigs are usually CW rigs. Much simpler. Also I can hold something of an interchange for an hour or two with another ham in CW when we share no common language... Not likely with any high tech modes other than on very sophisticated computers on both sides...

I have heard that CW is not the be all and end all mode... my answer is... SO WHAT??! No mode is the be all and end all mode... and since CW *IS* used currently a great deal I see no reason to ignore it.

And I certainly see no legitimacy in any argument for dumbing down the hobby either through reduction or elimination of the code requirement or the theory and regs requirement. I say keep them both.

Sure there is an aspect of 'I had to do it so why should they get a free ride?' to my position, but mostly it is based on pure unadulterated logic and reason.

It *might* be that we are the only Amateur Radio Service! All the other services are very highly structured, funded by taxes or investors, and do not have the broad charter that we do to maintain communications for ready usage in all types of circumstances and conditions, anywhere we happen to live or be, with whatever gear we can come up with or find at hand at any given time, place and circumstance for the purpose of assisting the public in time of need, enhancing international goodwill and advancing the art of radiocommunications. It's a pretty big umbrella that we live under and it certainly still has room for, and a need for, code communications. We don't all have the same interests, equipment, educational or income levels. We operate all types of gear, old and new.

If you think that the code has been replaced with later digital modes, go searching for CLOVER, PACTOR or AMTOR QSO's on any of the HF bands. Many times you will find *none at all* on the air, and never more than a few, but you never find a time that there are not quite a lot of code contacts in progress. Code will go away some day, just like spark and AM did, but that's in the future.

I'm afraid you'll just have to live with it, right along with the rest of us.

So you're not "compelled" that CW is a needed emergency mode. Does that mean that no one else in ham radio can be compelled, just because you are not? You who have never learnded code, know only what you have heard or heard someone else say, are making the decision for all of ham radio as to what is "compelling".

Well, I'm "compelled" to say that CW *IS* a necessary skill for HF ham radio operators to learn and be able to use for disaster/emergency communications. The fact that government/commercial/military entities have moved on to more modern, efficient means has nothing to do with the requirement for ham radio. We function under a different concept. Governments and other public or corporate funded entities must in the main consider as a high priority the cost/benefit of all services including communications. They cannot afford to maintain, even as a backup, services that cost money and only very rarely fulfill a needed function.

Ham radio, however, consists of a large number of worldwide code trained operators with common, non-complex equipment that requires no funding nor continuing costs to society. It is always there, ready to serve whatever communications need might arise, as result of natural disaster or whatever else occurs, when better modes are not available or fail to meet the need for whatever reason. This *does* happen, and the liklihood does not diminish just because some persons do not feel like learning code as a skill.

Logic dictates that one use the best means available to solve any problem, including communications. So, obviously code is relegated to a supporting or backup role in most circumstances since better, more efficient modes are usually available. This fact is NOT "compelling reason" to assume that it will never again assume an important, or even critical, role. That is an assumption routinely made by those persons who, for the most part, have not learned it and had the opportunity to work with it,and have little understanding of it's capabilities,

flexibility and ubiquity.

Code is simply *another* -an additional- means of communication. To say that there is "no compelling reason" to keep it is simply shortsighted and uninformed.

Richard-

I live in an area which experiences a few tornados a year. Tornados are extremely localized, so if one took out a rptr, which is unlikely, there would be 50+ more to use, several of which I CAN hit from my basement.

You sound like a someone who thinks one size fits all and since you're that size...

Well if that's true, I think you MUST learn to set up network routers because a small fraction of amateur traffic passes through them since it originated on packet. Or give up your ancient based license. It's as sensible as your argument.

Amateur radio has always been about _leading_ the communications pack. WE came up with SSB. WE came up with how to use satellites to locate down aircraft/lost parties.

The first means of communications we used was Morse.

It sounds like you're among those who can't keep up.

>
> I've used a cell phone in an emergency. I wouldn't have gotten a tow

Correct. It will eventually get through, unless you're foolish enough to waste the battery pack in one shot. There was a woman in ND (I think it was) last winter that got lost in her car with her cell phone, and they found her by having her make a call while an F-16 flew over the area; they found her. Try that on 80.

I fail to see how code would be worth anything at all here. Please explain.

I will also bet you any amount of money you'd like that I can make an antenna that radiates efficiently on 2 or 432 with what's available in most any basement, and that you can't do the same for any HF band, except maybe 10, which no one is ever on, except at the solar peak. And if you could get something to radiate on 80, 40 or 20, then on 80 they're too busy using 2KW to talk 1 block, 40 there's megawatt AM, and on 20 if you can't do 40 WPM, no one would condescend to work you.

>
> > HF and CW is a joke.
>
> There are lots of jokes much funnier.

Fine, tell me a couple. I always like a good joke. I'll be the judge of whether they're more amusing than CW, which even the Navy has abandoned.

Show me that more than .00001% of emergency traffic is done with CW. You can't, because it isn't. It's on SSB on HF and FM on 2 and 70 as well as packet on both.

Per the norm, your argument is absurd ... the fact that many
current hams are technically incompetent doesn't "make it OK"
and "negate the need for technical competence" ... is just
means that the system is screwed up and needs to be fixed.
Better technical tests would, at least substantially, solve
this problem.

De-emphasizing Morse and re-emphasizing the technical competence
requirement would be a win-win situation for ham radio.

Because no other service wants to take the time/effort/expense
to train its operators in a mode they will <probably> never use.

They're businesses. They need to make money. Morse Code is not
a good financial decision.

We are in AMATEUR radio. It's not about dollars and cents.

It is about communicating. We do this voluntarily.

2594. Morse Fallacy

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-10 00:00:00 UTC
From: jls <jls@tminet.com>
Message-ID: <34672359.F1AB3C3F@tminet.com>
Source record: 186992

It is 1997 and it is time to get real. Morse code is dead and the amateur code requirement makes about as much sense as installing a hitching post for horses in front of each new tract home. The code in an emergency concept was valid in the past but is no more. The wide variety of electronic communication methods available to the general public would likely make amateur communications largely unnecessary in most emergency situations today. Even if amateur radio does have such a role morse code would not be the mode of choice. Remember laptop computers, TNC's and ht's are unlikely to be destroyed in an emergency situation. If antennas for any frequency come down they can be replaced with temporary antennas in almost any conceivable situation. Perhaps those who remain fanatic about morse should petition the government for their own service on new frequencies to be devoted to their interest. There is no valid reason in 1997 for continuing any code requirement as a condition of obtaining an amateur license.

If the military still relied on the "efficient" Morse Code, the first air tasking order of the Gulf War would still be in the process of being transmitted. And there would be little assurance that the targeting codes for the Tomahawks would have been copied correctly enough to be within 10,000 miles of Bagdad.

The military abandoned Morse because it wasn't efficient or accurate enough to handle modern mission critical communications. Even for short messages, it is slow, easy to intercept, and easy to jam. Like the Brown Bess musket, it is a tool which has outlived its usefulness for mission critical tasks.

The military spends what is necessary to best accomplish its mission, whether that is in terms of hardware or in terms of man-months of training. It still sends troops on 20 mile forced marches, because physically toughening them is still a mission critical need. But it doesn't teach them Morse any longer, because that is inadequate to meet mission critical needs.

The emergency services, including the Coast Guard, have also abandoned Morse as inadequate to meet their mission critical requirements.

And the commercial services have also abandoned Morse. If as you claim, digital comms were more costly, then the commercials, who are price sensitive, would not have

abandoned Morse. But digital comm is cheaper, faster,
and better at meeting customer demands for radio transfer
of text information than manual Morse.

It doesn't take a rocket scientist to see that better communications
at a lower cost will be a winner in the marketplace. At least that's
true when the marketplace is free to choose. When the dead hand
of government regulation distorts the marketplace, inefficiencies
can be perpetuated. That is the major reason deregulation is so
widely hailed as a way to increase productivity and competitiveness.

: Please help! I have a large quantity of RG-6 and would like to use it for
: HF. I need to know if it is okay and if there is any considerations since
: it is 75 ohm and most HF and VHF rigs call for 50 ohm. Any suggestions and
: info would be helpful.

(I trimmed the followup-to line to just rec.radio.amateur.antenna...seems like this doesn't need to be in 7 different groups!)

I agree strongly with the response that mentioned that a 75 ohm cable can be used to transform a possible antenna impedance to 50 ohms...and the key is knowing what impedance your antenna is, and using a chart or formulas to find out what impedance your rig, thru the coax, will actually see. But for one very practical use on HF, you can see that 75 ohm line may give results no worse than 50 ohm line: if you feed a dipole that's up high enough to have a nominal 75 ohm resonant feedpoint impedance, then that 75 ohm line will deliver a 75 ohm load to the transmitter, a 1.5:1 SWR. If you used 50 ohm line, your 75 ohm load still yield a 1.5:1 SWR, at least at the load end of the line, and it won't be significantly better at the transmitter if the line is low loss. In either case, to get to 1:1, you need some impedance transformation, like a tuner, and you might just as well use that RG-6, which will have loss nearly as low as RG-8 solid dielectric line. (I'd expect nearly any transmitter with a tuned output stage, like the TS520 series, to handle 75 ohms just fine; and transmitters like the TS440S with the optional built-in autotuner should also be able to handle that 1.5:1 without any trouble.)

There's RG-6/U, and there's RG-6-type (many different varieties!)...the graph I have of safe power handling for RG-6/U shows 1kW at 14MHz and below, falling to about 300 watts at 150MHz and over 175 watts at 450MHz. The graph is based on a maximum ambient temp of 40C, and line in free air, and 1:1 SWR.

In response to YL Shih,
Sorry to say you missed the point with respect to "pledge."
Yes, I often say "you don't understand." It's a tired phrase,
but it's a truthful phrase, as evidenced by your recent
confusion.

As for the more important points, whenever I mention the ARRL
I always try to include mention of "Life Member, ARRL" when I
can, and when I remember (most of the time). I do that so that
people understand you can be a member of ARRL, and criticize
them roundly. I have indeed thought of resigning my ARRL
membership, the first Life Member to do so. Not to please the
ARRL, who I am sure would be very happy for this, but to please
ME. I haven't done it quite yet because while I am still an
ARRL member, I have portfolio to criticize. And my end result
doesn't concern itself with being ARRL's friend, enemy, or
anywhere in between. I am concerned with nothing else but
the Service, not FCC, not IARU, not you. The Service. And
while the Service can still be saved, I'll be in there
pitching to save it in the form of restored standards.

>>insult at every opportunity? :-))

>Well put Ed, but I don't think he gets it, becuase you aren't the first >to mention it.....

I would imagine not. :-) It kind of reminds me about Wayne Green's editorials. I have actually read a number of them in which I felt Wayne was making some pretty good points (even some of those about ARRL, I might add). But then Wayne reverted to his "cliche diatribe mode," blaming things on "all the Extra Class hams" and other phrases with little real meaning. If he continued on to make a few more salient points, I will never know; I stopped reading and pretty much discounted the things I had already read, having doubts about the overall good judgement of the author.

This ties in strongly with the current discussion. When someone tries to summarize the beliefs of the other side by concluding that they are simply offering "hazing rituals" or are "whiners," etc., that is just plain an oversimplification that adds nothing to the discussion and usually detracts seriously from anyone reaching any understanding or finding any common ground.

It is unrealistic to assume that those who offer that Morse Code testing are doing so simply because they want to haze others or, even less realistically, that they are doing so out of a sense of "religion." It is equally unrealistic to assume that those who offer that Morse Code testing should be eliminated are all "whiners looking to take the easy way out."

In reality, there are valid reasons that each side believes the way that they do. The reasons should be DISCUSSED, not sidetracked into meaningless oversimplifications that serve only to shortcircuit the discussion. We can and do probably disagree with each other on the relative merits of our reasons for feeling the way that we do, but we will never be able to discuss those disgreements rationally becuase there are a number of folks on both sides that seem to always turn any rational discussion into a flamefest fed by the inflammatory, oversimplified, cliche-ridden, insultive rhetoric.

For the life of me, I just can't understand how any otherwise rational human being could feel that to be appropriate or useful. When I see that, much like I do with Wayne Green, I generally distrust the judgement of the poster and that distrust colors my perceptions of all he or she had to say. I don't think that a desire to accomplish anything forms much of the motivations for those who choose to be so obviously disruptive.

Maybe it is time for all of us to drop the words "hazing rituals," "whiners" and "spin doctors", and all the other terms lacking any significant meaning or relevance to what we discuss here and substitute rational ideas and discourse. This is not saying that rational ideas and discourse have not taken place here; they have. But for me, that rational discussion has added to my understanding of these issues, the cliches and insults have not.

In response to Carl Stevenson,
Whoa, wait a minute, good buddy. Phil Karn is an excellent technical man, no question. But that doesn't mean his remark about the Internet is right. Fact is, the Internet still has nothing major to do with ham radio. If you just want to communicate, the Internet is the way to do it. But you're not going to be able to build an oscillator, work tropo scatter, or do any of that good stuff on the Internet. The fact that more and more hams are using the Internet says a lot about how they view its main strength as a communications tool, versus the vagaries of the ionosphere, etc. But communications is only one small part of the vast world of ham radio.

You can't however deny that at least some of the conditionals, and technician class licensees didn't learn code. Some of them didn't even take the exam that gave them their privileges either.

When the FCC used to randomly retest conditionals, the failure rate for conditionals apparently was rather high, it's probably higher than the retest rate would be for Dick Bash hams now. Of course, it's now irrelevant. The FCC only retests where it has evidence of fraud, and it's unlikely to find evidence of fraud in a test that took place 30 years or more. It's also pointless to do so too. I've certainly sent CQ, or HI with a car horn to another ham with a call letter plates, and gotten blank looks until I held up a microphone. I do not send cq fast on the car horn if just so I can space it properly. Since most of the plates were for hams with K#XXX, W#XXX, WA#XXX, I would expect 5 wpm cw or so to be recognizable. Since I've even had technician class hams who don't know cw try to send cq or hi, and I managed to figure out what they were sending, I'm not sure what it could mean except not knowing cw.

How about the fact that the person you're sending to is not paying attention to you other than the fact you're honking your horn?? Many a time I've honked and gotten that response. Many a time I've been the recipient and given a blank stare. Quite frankly, I am paying more attention to the traffic in front of me than some goof trying to contact me with his car horn. I'm sure if you do that in Andseron's neck of the woods, you're response would be 5-9 (5 shots from a 9mm)

Not knowing CW has nothing to do with car horns or sitting in a restaurant having someone tap out code with spoons and expecting me to copy that as well.

IOW, a rash assumption, sorry OM

Message-ID: <648g6vpae1@excalibur.flash.net>
Source record: 187005

The operation of this system first seemed pretty good, except the software seems to be running in a loop of some kind that will take all the processing power you have available (P166 processor) which will eventually be corrected by the manufacturer. Before I take it back for a refund, any suggestions appreciated. I get windspeed readings of 125 mph when transmitting and lose serial link to computer. Seems to happen on all bands from 80 to 10 mtrs running 1 KW and 2 el quad at 65 foot height (10/12/15/17/20) and (dipoles on 80/40 at 50 feet).

RS Technical service was of no assistance in the matter. Tried torroid cores on each line to no avail.

Would also like to hear from anyone who is satisfied with another brand Weather Station using rain gauge, aneometer, humidity&temp, and barometric pressure and computer logging being operated in RFI field of amateur radio station.

REPLY...

Having to be so specific is tough. First of all, I'm not that good with dates. Without the PIM on my computer, I'd easily forget anniversaries, birthdays, holidays, and other events.

And I stopped keeping track of my age as I approached 40 (my solution to "mid-life crisis"). I honestly had to do the math to get my age to post in the message you replied to above.

Like I said, my actual age was really not that important to the message I posted. I only wanted to give a general age reference so that people would know I was not a young kid (or an old crow - but getting there :-).

Nice talking to you.

REPLY...

William, I am not trying to ignore you. Your message does not show up on my server. Cutting messages seems to be my server's solution to their newsgroup computer's overload. Therefore, I did not know your message existed until "The CB Guy" posted a reply to it.

Anyway, on to your message. I have no doubt I COULD learn morse. I just don't see when I am going to have the time to learn it. Right now, we are preparing for a extended trip overseas. Since we are likely to be over there for several years (the last time we went, we stayed for 9.5 years), we have a lot to do before we go (I could go into more detail but I doubt anyone really wants to hear it).

Perhaps, in a couple of years, I will find the time to learn morse. Until then, I'll enjoy what VHF/UHF has to offer. And I'll hang on to my trusty CB.

By the way (for those interested), CB is a blast in Europe. It is not plagued with the problems we have here. There is the occasional troublemaker, but it is rare to run into one. And it is a great way to meet the locals (we made many friends through our radio contacts).

The new KB8UYZ.COM server will be online within a few days! We will also launch our new amateur radio web site hosting service when the new server goes online. Contact us for more information on how you can get your site hosted with us.

Our new web server will be faster, and have a more reliable internet connection. We have also upgraded our hard disk capacity, and increased the RAM. Our hold-up has been the purchase of a new router, which we now have and will be installing tomorrow.

[snip valid explanation]

There's a simpler answer, too:
Have you got a guaranteed S/N ratio of 30dB? Data rates over an analogue
channel are proportional to both bandwidth and S/N.

Another youngster ("...get real") without an HF radio. Pity.

>Remember laptop computers, TNC's and ht's ...

And he's an appliance operator who probably doesn't own a soldering iron,
too.

JLS, purchase a ham projects book, get some components, heat up the
iron, and do some building to get a feel of what amateur radio is
really about. Once you see the complexity of the other modes,
you'll understand why the common mode amongst the world's HF hams
has been code for 90+ years.

You were wrong both times, Bill. It is actually you who needs to be
pulled up and asked to provide some proof. K0MB never suggested that
all conditionals did anything at all, let alone cheat. Why not just
re-read what he wrote? This is his ENTIRE post:

In article <19971110020401.VAA13115@ladder01.news.aol.com>
mailfrmpa@aol.com "MailfrmPA" writes:

> > But remember, ALL the
> >HF flamers in this country passed the CW.
>
> Hardly. Remember the "Conditional?" It was the *FIRST* no-code license.

All K0MB did was object to someone else's use of the word ALL, but
now you've totally forgotten who really used that word. And the whole
cheating issue is purely a figment of your own imagination.

Also, your mind reading ability, which allows you to announce what
K0MB obviously thinks, is a dandy party trick. Would you care to
double up your bet and try it out on me and tell everyone what I
think about code, cheating and the meaning of life?

Regards,

>William Lee N5WRX

I believe that he still must pass a 5WPM test to qualify for a waiver.
IMO, that shows that most people should be able to learn and pass a test a 5WPM.
If you ask any Ham that has gone on to upgrade to General or above, they will
tell you while copying cw at 5 wpm, you are always waiting impatiently for
the next
character. sorry but I feel that there is some laziness involved in not
learning cw at
5 words...

It happens to be a requirement of the hobby that everyone knew when they
came in.
If someone opts to come in as codeless then so be it, just stop the bellyaching
about CW. The attitude of some is that if they can't do it, then it
should be dumped.

Absurd...

>As is your post here, a waste of bandwidth!

Did you really need to flame the writer? Aside from that, I will say that
yes, code is slow and inefficient.
It is, however still useful because it still works when other communications
don't. I don't feel that code necessarily needs to be a requirement for
licenses, as they do not necesssarily made the amateurs better operators.
It does, however, work when other forms of communication are not possible,
including for stroke victems in person.

I have to agree with you that it sucks. It seems like it would be interesting to learn some day, but why the hell should I have to learn it to get a higher license? It's like learning hand signals to get your driver's license.

Well Rob,

Lets do a little scenario. Take the 13kW continuous offering for example. Now say it only runs at 50% efficiency. We are now up to 26Kw. Throw in another 4kW to cover other losses and we have a grand total of 30kW.

At my house, with a 200 amp main, each leg runs 121V-122V no load. With every thing in the house that uses electricity turned on and and a few extra 500W floodlamps plugged into spare plugs, 1000W metal halide flood, air compressor and a 2hp deep well jet. Oh, I ran the hair dryer also. The voltage drops to a minimum of 116V while drawing 137A. My electric company was kind enough to use 2/0 copper for the connection to their secondary. That gives me 232V phase to phase. 30,000W/232V = 129.3A This still leaves 70.7A to run the rest of the house on. An amount sufficient to run the rest of the house under normal conditions.

Electricity wise, I don't see any problem. Actually, it may turn out to be the least of all problems. Of course you may put a kink in the theory of divirsity that the electric company uses in figuring distribution transformer kVA, but that is their problem. They'll just have to use a

larger distribution transformer if you contest a lot.

Do you really think that this is true?! Do you think that microphones were around first, and THEN they invented code because it could "get through" better?!

The fact is, code was invented because they didn't invent or have microphones yet. Once they invented Mics, the code slipped away, and telegraph poles were replaced with telephone poles.

>function.

Well I can't and most other hams don't either. If CW was maintained
as a skill yur argument would have some merit, that CW isn't
maintained by many HF hams shoots that argument.

> Ham radio, however, consists of a large number of worldwide code

The philips Fm1000 /1100 radio have a 24c16 eeprom for programming .
Is there any info around but this cable. I know it plug into mic socket,
but thats about it.
even if I can read eeprom so as I can start to work out codes etc.
OR can you help with reading writing the eeprom out of the rig (it will be
a start)
I have done this with the motorola syntrax prom . Now i can program eproms
to replace the prom.
Thank for any info on the Fm1000/1100 (this one is a 1100)

>3-phase power input, and that would be a serious problem in residential
>areas.

In Europe, three-phase is readly available. Power is distributed locally
by a three-phase 415V Y-system, and individual houses get a 230V AC feed
from one of the phase conductors and neutral. Neighboring houses are
connected to different phases to roughly balance the neutral current.
Large buildings and light industrial users get all four conductors.
In countries such as Sweden which have a history of large electric
heating demand, even individual houses have three-phase supplies.

To all who would resort to personal attacks instead of merely
continuing the DISCUSSIONS/DEBATES:

Are you "worthy" of the privileges bestowed you by the FCC or
other governmental agency?

You continue to insult.

You have no respect for others, ESPECIALLY your fellow amateur.

It is time to look back and reflect upon the ideals of amateur
radio and maybe, just maybe, each of us can take the effort to
see where we don't measure up.

Just because someone threw a nasty insult at you doesn't make it
right to throw an insult back.

The thrower is a jerk. In returning one, you're stooping to
that level. I can't believe I actually have to tell this to
a bunch of adults, but I do since many of you seem to be quite
deficient in the area of

CIVILITY

Look at the ideals of ham radio again. See if you fit in.

Why waste time to determine if the average house will run an amp this
large? It is NOT legal to run in the US for any ham. Unless you crank
it way down ... 1500 w output = legal max.

There was a typo in our original Correction! sent out this morning.
Corrected correction follows. Subscribers/Newsletter editors, please take
note:

~~~~~~~~~
ARRL Lab Supervisor Ed Hare, W1RFI, made a mathematical error in our report
"FCC Sets RF Safety Evaluation Threshold for Repeaters" in The ARRL Letter,
Vol 16, No 44 (he really does know better!). Here is the correct calculation
for determining ERP: It*s fairly simple to calculate ERP. Take the PEP input
to the antenna and multiply it by the numerical equivalent of the antenna
gain in dBd (dB relative to a halfwave dipole in free space). Gain relative
to an isotropic radiator (a point source), dBi, can be converted to dBd by
subtracting 2.15 dB from the dBi number. For example, say your repeater puts
out 100 W and has 3 dB of feedline loss. Calculate: 100 x 0.5 = 50 W to the
antenna. The antenna has 8.8 dBd of gain, or 7.59 as a decimal. So the ERP
is 50 x 7.59 = 379.5 W.

Canadian Amateurs are allowed to use 1000W but this number is
expressed in D.C. INPUT... or 2250W SSB & CW OUTPUT, 750W output in
other modes.

I believe US amateurs can only use 1.5 kw !!

Yes, we can use 2.3 kW !!

Source record: 186887

I downloaded the Keplarian Elements bulletin. It is very confusing. The key does not match what is in the data. It shows several with a pattern aaa.bbbb and there should be 4 like that in line 2 but there is only 1. Why don't they just do it by position and put place holders for any missing data. How do you decode this stuff? It is VERY ambiguous.

Search got me nowhere. All the references were not valid. If you have
the URL , please post it. I think I am sticking with LOGEQF. It has
everything and is easy to use and the next version will take care of the
short field problems and add other things.

Dwight, CB in Europe sounds like the way it was here when I was still
in high school (I didn't get my Novice ticket until graduating from
college). It was really fun back then with many operators but no
jamming, cursing, hogging channels, etc. I did not operate CB for many
years after high school and was totally shocked when I got back on.
After a few weeks I quit it for good. Unfortunately, now there are many
ham operators who have adopted CB habits for the ham bands, too, but it
still is a good hobby. I enjoy all aspects, from phone, packet, cw and
even am and I think it is worth it to get the code requirement out of

the way.
I learned 5wpm in my spare time while going to college at night, working a full time day job and trying to raise a family. I encourage you to squeak in a few minutes each day if possible. I'd like to visit with you on hf while you are overseas. Good luck, in any event.

Well, that's not exactly correct. The 13 WPM and 20 WPM code exams
can be waivered with a "valid" doctors exemption. The 5 wpm exam
must be passed. There are a number of ways that this can be done,
with lights, vibrating devices and in extreme cases, a sending test
can be given.

>>Can anyone point me in the direction of becoming a ham?

What is Ham Radio, and How do I get started?
- A short introduction by Hans Brakob, K0HB

Here on HamNet we frequently see messages asking for more information about the hobby, and how to get started. This file is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help on the forum. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual". Steve, by the way is a regular here on Hamnet. He acts as the ARRL HQ representative.)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to summon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We

need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous exam.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material and more information about classes, examination points (the exams are given by volunteer Hams in your community), and clubs in your area. A number of organizations will be more than willing to help. One such organization is the American Radio Relay League. Write them at:

ARRL, 225 Main Street, Newington, CT 06111

or call them at 1-800-32NEWHAM.

Ask for their "newcomers" package. It will include more detailed information, a list of classes and clubs in your area, and a list of scheduled examinations in your area also.

If you are near a Radio Shack store, go there and ask for a book

CHINA HAM NEWS 11/11/97: EME Schedule

Contributed by Lars Melin, SM0KAK
Member, Tsinghua University Amateur Radio Club, Beijing, China

Edited by Rick Niu, BD1QL
MBA '99, Columbia Business School, New York, NY
xn6@columbia.edu

BY1QH will be QRV on 144MHz EME at 1300-2300z, Saturday, November 15, 1997.

1400-1600z CQ
1600-1700z Listen around
1700-1900z CQ
1900-2000z Listen around
2000-2100z CQ
2100-2200z Listen around
2200-2300z CQ

BY1QH will always call CQ on 144.120MHz, using two-minute timing, with BY1QH transmitting in the first period. BY1QH plans to stay on 144.120MHz the full even hour, and stay there longer if someone is heard at the end of the hour.

During the contest, BY1QH will be QRV on a borrowed mobile phone: (86-10) 9085-4674.

So far BY1QH has worked SM5FRH, SM5BSZ, SM2CEW, KB8RQ, and W5UN.
If you want to see some pictures taken at BY1QH just before the first leg of the ARRL EME contest, take a look at the homepage of PA3DSS:
http://www.horizon.nl/~tdekkers/by1qh/index.html.

CHINA HAM NEWS is available for unlimited, appropriate distribution.

SB SPCL @ ARL $ARLX020
ARLX020 AWA cofounder Bruce L. Kelley, W2ICE, SK

ZCZC AX20
QST de W1AW
Special Bulletin 20 ARLX020
From ARRL Headquarters
Newington CT November 11, 1997
To all radio amateurs

SB SPCL ARL ARLX020
ARLX020 AWA cofounder Bruce L. Kelley, W2ICE, SK

Antique Wireless Association cofounder and AWA Museum curator emeritus Bruce Kelley, W2ICE, of Holcomb, New York, died November 6, 1997. He was 82.

Kelley, along with George Batterson, W2GB, and Linc Cundall, W2LC, founded the AWA in 1952. The museum stemmed from one that Kelley had set up in his barn in the late 1940s. Kelley had just recently stepped down as curator of the AWA museum in Bloomfield because of ill health. An April 1991 QST article about the AWA Museum called Kelley the ''guiding light'' of the museum.

Bruce Kelley was very well known as a radio historian and among vintage radio collectors. He was a frequent contributor to the AWA journal, The Old Timer's Bulletin and was co-author of ''Hams Span the Atlantic on Shortwave.'' that appeared in the December 1996 issue of QST and won the QST Cover Plaque Award for that month. Kelley assisted in the preparation of Ken Burns' TV documentary ''Empire of the Air,'' some of which was filmed at the AWA Museum. Kelley also produced the video, ''The Trans-Atlantic Tests and Station 1BCG,'' available from the ARRL. He also was club historian for the Rochester Amateur Radio Association.

Kelley was first licensed as W8ACY in 1929 and had been a continuous member of the ARRL since then. He was retired from the engineering department of Eastman Kodak.

Ed Gable, K2MP, who recently succeeded Kelley as museum curator, said, ''The world has lost a true radio historian and a great radio amateur.''

Services will be Thursday, November 13, 2 PM EST, at St Peter's Episcopal Church in Bloomfield. Kennedy & Son Funeral Home in Bloomfield is handling arrangements.

Helicopters noted, but ... you only have to get the antenna and
preamp up into his sidelobe, not the operator. Remoting works for
the DFer too.

So run up some kites or high-altitude baloons for ground-based
wide-baseline TOA. Or hang your doppler array with gyro stabilizer
and digital compass and differential-GPS from the kitoon. Then use
APRS to compare results either by signal strength or by bearings.

My, we are taking this all a bit personally, aren't we? If we are really
engaged in stuff we consider personally fufilling, why should we care about
what anyone else has to say about it? I certainly don't.

>There is no reason to believe that, despite the lip service they pay,

Mindless paranoia. Nothing would be served from banning CW from use on the
amateur bands.

Ah, the ARS has this problem as well. It costs the ARS a great deal to make sure that its membership are competent Morse operators. One might ask what benefits the ARS derives from this Morse competency. I am still waiting to hear one.

>Since MARS is staffed primarily by *military*
>radio operators, this explains the ban on CW. I assure you it has
>nothing to do with the efficiency or effectiveness of the mode

>that works...

The US military has always been willing to spend extra money to provide technology to increase their survivability on the battle field. The fact that there are military contractors who make big bucks on digital communication gears is no more surprising that the fact that the guys who make bolts for the military make big bucks.

>now you've totally forgotten who really used that word. And the whole
>cheating issue is purely a figment of your own imagination.

Not so...how can he describe the conditional as a nocode test (first
or otherwise) unless he is claiming that those so licenseddidn't
take or otherwise pass the required 13wpm code test.

>Also, your mind reading ability, which allows you to announce what
>K0MB obviously thinks, is a dandy party trick. Would you care to
>double up your bet and try it out on me and tell everyone what I
>think about code, cheating and the meaning of life?

I care not what you think, I was responding to what K0MB had said,
and as above, he does IMPLY that conditionals did cheat by
not passing a code test when there always was a 13wpm test
required.

I don't know about Demon prices pre-1996. However, not many
people had local-call access pre-1996 unless they lived in a big
city. Some people were attracted to packet as a cheaper
alternative to BBS and the internet. Also, don't forget that
the max speed for most people used to be 14,400 bds, which is
not too far removed from the 9600 bds which was possible on
packet if you were using the right gear. Sure, today, packet
is "no-contest".

I was a police officer from 1978-1991 and I'm really glad that they did lower the standards somewhat. I never did like having to qualify on the range with a musket and flintlock. :-) That really isn't a good argument for code. Police science has never had a problem with modernization. You know...adopting new technologies when they are present and letting go of old antiquated practices when they lose their effectiveness.

Really, is showing your prejudice against affirmative action and job performance based selection criteria a good argument for keeping the code? Are you saying that the non job performance criteria that was used until 1973 to keep minorities off the force is equivalent to what Morse code is today? If so, that is a really bad analogy to use and doesn't do much for your argument. If you had to work with a woman, even though she couldn't drag 300 lb.. for a distance of 50 ft. across the parking lot, you need to get over it. It was 24 years ago and history has now proven that they (and other minorities) really can do the job.

The bottom line is that, if Amateur Radio was a job and not a hobby, the Morse Code requirement would have been dropped already. It is not an indicator of performance, it's not necessary for effective radio operations, and is only used as a means to keep people from using the frequencies. In the real world of business using such a filter would never fly. Selection criteria has to validated as performance related! Morse Code simply doesn't meet that standard.

The only thing saving it in the US are the international agreements and they will change. Mabey not the next one, but sooner or later progress will occur. Other countries have already started a move to do away with code and some are ignoring the agreements altogether.

>
> I went into the military in 1973. Sometime around 1981 they recalculated
the
> skill qualification exam scores giving me and everyone else higher
scores. Tell
> me that ain't lowering standards.

Hello!!! Until 1971 the US military had the DRAFT. Pretty stiff qualifications there. Let's see now...you had to be born...be able to see...have two feet...and didn't have enough money to go to college or Canada. You didn't even have to want to join! Yep, pretty stiff standards. Strange how when the military actually gets around to doing what they are chartered to do (kill people) the standards fall right through the floor.

>
> In the particular field I was in, it was obvious scores were substandard. The
> washout rate was tremendous.

As I recollect, the standards in 1973 (when you went in) were pretty stiff too. They even started requiring that about half of the new recruits had a high school diploma didn't they. Of course the recruiters told people that they could be a nuclear engineer or a brain surgeon. Then when you washed out of school, they put you in combat arms or made you a cook. The washout rate was planned. In advertising it's called "bait and switch". Not legal in the civilian world but we aren't talking about the civilian world. Plus, it saved them that 2-10,000 dollar sign-on bonus for combat arms.

Once again, the military is not a good example to use to justify a code requirement. They don't still use or train infantry to use the flintlock. The calvary doesn't have to learn how to ride a horse. Radio operators don't use Morse code. Even the military will let go of antiquated technology after it's time has passed.

>

Adult educational theory dictates that training is done to impart the knowledge of specified skill sets. The purpose is to teach someone how to perform a task. This is done by letting the student know up front what the objectives of the training are. Letting the students know what skill sets they need to master. Teaching those skills. Then you test them on those skill sets ensure that you, as an instructor, have given them the necessary knowledge to perform the required tasks. It's a win-win situation for everyone involved. Training is not about culling out the weak or those who can't guess what kind of questions the instructor will be asking on the tests. It's about imparting knowledge. Given the severe lack of amateur radio operators who are willing to take the time to volunteer to teach new people, publishing the test pools so that people could teach themselves appears to have been the best answer.

The bottom line is that it's performance based. The purpose is to ensure that the student learns the skill. Giving either a question pool or a clear set of specific training objectives that will be tested to the student before the training takes place, is common to all adult training

programs and works very well when teaching both simple and complex tasks. It's used all over the world and has proven to be effective. Training and testing should be an objective measure of imparted skill sets. It should not be a filter to keep people out of a particular profession or hobby. The bottom line is that the standards weren't lowered, but a more effective means to meet those standards was adopted. I think that this showed progressive thinking on the part of the FCC and that they should be commended.

> ever.

Well that's an objective observation. There are more lid's on the radio, but then there are more people on the radio. One percent of 1000 people is 10. One percent of 100,000 people is 100. No one in their right mind would argue that there aren't more lids on the radio. I wouldn't even argue that it can't be accounted to providing a more effective method for people to get licensed. However, I will argue that the solution is NOT using the code to keep people off the bands. Part of the solution is the use of effective enforcement to catch and prosecute those who break the law. The solution is for amateur radio operators to take the time to teach new operators the practices and protocols that are expected on the respective bands in a manner that is not offensive to the amateur being taught. Don't sit back and wait on the new guy to mess up so that you can correct him to enhance your own ego at his expense. I see a lot of that going on. The other solution is to give the bands to business interests. No amateur operators = no lids. This is not a solution that either side wants to see.

Lid population increases in direct proportion to the general population on the bands. Percentage wise, it's probably about the same ratio. What others are trying to point out is not that there are lids on the radio. What they are trying to point out is that there are lids on the Advanced and Extra portions of the bands. The argument being that a knowledge of Morse Code is not an indicator of performance. Seems pretty self-evident to me that this is true.

In fact, based on equally valid personal observations, I would venture to say that the lid to operator ratio in Advance/Extra portions of the bands

is significantly higher than it is in the VHF/UHF bands where no-code Technician's are prevalent. Of course given the greater range of HF communications a few lids can go a long way.

As to your assertion that anyone can learn code, I tend to agree with you. The vast majority of no-code Technicians can learn code. I would even venture to say that most can learn it with relative ease. The question then becomes, why don't they do it? Some people say that they are lazy and don't want to put forth the effort. However, these are the same people who put forth the effort to study and take the test. They spent thousand(s) of dollars on equipment the they had to work to earn. They frequently volunteer their time and effort to ARES and SKYWARN training, drills, and exercises. Usually spending money that they had to work to earn in the process.

The problem is not laziness. The problem is that those who promote Morse Code as a requirement have not presented a rational argument as to why they should need to learn the code. Given the fact that all other radio services in the US have dropped it as a requirement and no longer use it, the necessity for code looks more dubious all the time.

Arguments like "the ARRL took a poll and we decided that you should do it", "it's the best digital communications around", "it's required by international agreements" and "if there is a earth quake and all other communications are destroyed, you can still communicate using a capacitor" are not convincing. If there are valid reasons to learn code, convince us of the need and the argument will go away. Long time no-code technicians are not stupid or lazy...they are just unconvinced of a need.

So long as no one presents a valid reason to learn code, those who will not blindly go where everyone has gone before will continue to petition the FCC and the ARRL for a productive change in policy that allows a more effective use of the frequencies by the majority of qualified amateur radio operators. Sooner or later the government will recognize the validity of the arguments presented by both the no-code technicians and those with advanced licenses who recognize that the time for a Morse Code requirement has outlived it's usefulness.

BTW..I'm posting this from alt. radio.scanners. I have tried for two years to stay away from this never ending argument. I unsubscribed to the amateur radio NG's, but it just keeps following me. That's OK. I like spam sandwiches myself.

BTW Carl, I haven't talked to you in years. What's this I hear about an organization to promote dropping the code requirement? How do I join? I can't hide from it so I might as well join in.

2680. AEA LogWindows Logging Program

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-11 00:00:00 UTC
From: wb6wqa@juno.com
Message-ID: <879288107.24710@dejanews.com>
Source record: 186915

I have the logging program AEA LogWindows, version 3.0, which is a fine logging program.

After undergoing a callsign change, I tried to go into the program and change my callsign, with no luck.

I'm told AEA is out of business and can no longer help me.

Anybody out there know how to change callsigns in that program? (By the way, I am the original purchaser of the program).

Tim Watkins W6WQA

>Even though Japan has the nocode licence, could/would you accept their
>other regulations?

yes.

australia (29-30 MHz 400W) + new zealand (full 400W?) + fiji (full
150W) and many many other countries allow no coders to operate on HF
bands.

>I wonder, though, how many cb to ham converts could stay with the 10
>watt power limits?

20 watts for VHF.

many talk with JA 10watts stations in north america. here in
montreal, some people are talking to 10 watt JA stations on 80m.

>From reading the cb forums, I get the impression that most cbers are
>not even aware of, or care about, the 5 watt limits, considering how
>many get amplifiers, seemingly, as a natural part of their stations.

CBs in Japan:

0.500W AM output Max
8 channels

CBs in North America:

4 watt AM output Max &
12 watt PEP output Max
40 channels

Dave, if that is true and you can get a doctor to validate it, then you can
get an F.C.C. waver for the code portion of the tests. I have a friend here
(call withheld for obvious reasons) that went that way and he now holds a
general class licenses without having taken the CW test. Boy did that stir
up the good old boys around here.

If you unexpectedly honked "CQ" or "HI" at me while I was on my motorcycle you'd wouldn't get a blank look from me - you'd get a rock tossed at your car. Honking at someone in close proximity is quite startling; the driver is concentrating on other traffic - code is that last thing on his mind.

Sorry to repost so quickly, but my basement scrappings are selling, so to eliminate e-mail from our folks, here is a relist. Some prices are adjusted. Frank

From my attempts to clean up the basement: (revised/added 11/12)
(1) Motorola Metrum 12 channel, 2 meter 10 watt, manual, mic$65
(2) Motorola Metrum 12 channel, 2 meter 25 watt, manual, mic$90 each
(1) Motorola 10 amp (surge), 13.8VDC power supply $50
Microlog AKB-1 morse keyboard...$85
RCA compact RS-232 terminal, has video and TV-3/4 output. Perfect for packet$50
Turner 250C microphone...$25
Kenwood VFO-700S (for TS-700 or SP) $75
Swan 20 Amp power supply, Model PSU-5 (for Astro 150, etc.) $75
AEA RL-1 controller....$125.....with 2 450 radios, wired.....$200
Regency HR-312, 12 channel, 35 watt 2 meter....$100
Icom IC-502, QRP 6 meter, solid state rig with manual, mic $150
SBE-50, 10 watt 6 meter solid state rig, with manual, mic.$175
Kenwood TR-72, 22 channel, 10 watt 2 meter, manual, mic $80
Heath VFO (vfo only p/n 1324) $15
Hallicrafters FPM300 vfo (board only) $5
Autek QF-1A $35
Icom IC-725 AM/FM board.. $50

2 Motorola Mocom 35 escutchens $10 both
10-15 Motorola HT-220 volume pots (pulls) $10 for all
1 Motorola PT-300 VHF, 151.625, with AC supply, mic...$50
2 Motorola MT-500s, VHF, 161Mhz, BBU, nicads, rapid chgr, for $125 (all)
2 Motorola HT-220s, 154Mhz, PL, nicads, slimline, both....$125 both
5 VHF Motorola Maxars, most with mics, most work, may need repair, but as-is $100.00 all
2 LOWBAND Motorola Maxars capable of 29.6Mhz, no mics, need speakers, as-is $40 both
10 UHF Motorola Maxars radios, most have mics, two freq, DPL, most work, but as-is $200 all
10 carcusses, lots of mics, pl decks, etc. lots of usable parts. Will give to above buyer (s).
All Maxar radios have scratched and have marked cases, including wear on the outside. The inside electronics however all look good or are repairable. Radios from this group have been tuned by others for packet. Mot (I think) still sells cases, if prettyness is your thing. I have also used them for friends to build (small) remotes to allow them access to distant repeaters. In addition, I have lots and lots of parts, which I will include free to the buyer. Just lost

interest in projects, and need to clean up the basement. YOU PAY SHIPPING ON ALL.

I don't know if the MARS director is a Tech or not, but I do know that he didn't order the ban. That policy was set by the Assistant Secretary of Defense. The reason was to establish a uniform military wide communications policy, IE DOD no longer uses Morse.

>Unfortunately, there are no amateur rigs available today that can be used
>to broadcast outside of the amateur bands on AM.

yes, you CAN transmit outside of the amateur bands on AM (there are
many rigs available from ICOM and YAESU), but it will be illegal in
the US + Canada at least.

> It's also just about
>impossible to modify an existing rig to do this.

?????
You can transmit outside of the ham bands, but it's illegal.

>If you did somehow manage to procure a rig capable of running AM and ran
>a private program, the FCC (given its rather impressive monitoring
>capabilities and manpower) would have no difficulty locating you in minutes.

if no one knows there is a program (that you broadcast), the chance of
someone listening to your station is very low.

>analog voice.

It doesn't take an "exceptional operator" to use APF, a notch filter, and
a 250khz crystal filter to weed out unwanted signals.

>Morse definitely doesn't get through better than a well implemented
>digital mode such as Clover or PACTOR II. They can work with signals
>an operator cannot even detect by ear.

What's even funnier is that even all these fancy digital modes can't
copy a signal that DOESN'T EXIST. And, if you decide to use one of
these fancy modes, that's precisely what you will be listening to
99% of the time, because >hardly anyone< uses them!

Hello, Bill,

Let's not paint too broadly with that brush. I would suspect that almost all, if not all, of those who offer that the Morse Code test should be eliminated follow the rules -- either they have passed the Code test and operate HF, or they haven't, and don't. To imply that those who don't LIKE the rules don't FOLLOW them is really not fair.

I have seen a few abuses; some might offer that this post doesn't belong here, either, although I think disussing how to get this group back to its charter is appropriate for .misc. I think, however, that most of the off-topic code-war posts on .misc have evolved from the original thread and the posters just don't stop to think about whether the content of their discussion may have become off topic. I would rather think that those who have strayed have done so out of enthusiasm for their "cause."

Perhaps those of us who do post regularly to both .misc and .policy could agree that we WILL be more careful and respect those who want to use this forum for its original intent. (I will make two observations: we have all "strayed," myself included, and we all know who we are. :-))

That may not solve the problem for the newcomer who is not aware that policy was created specifically to offload the code discussions from misc, nor will it help the very few who may not care about what they post where (a very small minority, if it exists at all). But I think some "voluntary compliance" will certainly reduce the S/N ratio to a level that doesn't affect the signal enough to matter. :-) Speaking for myself, I will do so, and encourage a few of my more vocal friends to do the same.

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going. If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT and Phase 3D see: http://www.amsat.org

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

DJ 580-T with 7.2v standard battery, charger, antenna and manual. Radio has been modified to receive AM aircraft and full 800mhz/cell band. It is in very good operating condition, but has seen a lot of use, so about half of the keys have the characters worn off, the plastic cover over the lcd has wear marks on it, and the original owner scratched his driver's license number on the back cover.

None of these wear features affect the operation of the radio. It transmits and receives very well, and all of the other functions such as CTCSS, DCS, and memory dialing work properly.

Price is $225 plus shipping charges.

Thanks.

No, Federal laws do not supersede local and state laws. State and local laws can always be more stringent than Federal Laws; however, they can not be less stringent. However, there are no federal laws saying that you have a right to put up an antenna. There are federal regulations regulating height. This subject has been covered extensively in CQ and several other magazines recently. Just as a short sideline, the county commissioners in my county have just recently placed a one year moratorium on new cellular towers in the county. Big business isn't fairing a lot better.

The FCC has been somewhat reluctant to come in and tell municipalities that they cannot pass such laws. There have been a couple of cases where they have. More interesting than state and local laws restricting antennas are the restrictive covenants attached to a lot of deeds. I think the bottom line on those is that if the restrictive covenant prohibits antennas you can just hand it up.

hi all,
I try to make 2m receiver with motorola MC3362 but I didn't prepare
LO OSC L(0.41uH) C(33p) connected PIN 21 and 22.

Does anybody know which component (L and C) i can use for the
144-148 MHZ or how do i calculate value of L and C.

Dear LLKLODT:

Check out the ARRL web site, they have lists of lots of clubs and
organizations, find one in your area and go to one of their meetings,
Amateur Radio clubs are no different than any other organization, some
are good some not so good. But it's a place to start.

As for the above comments by Mr. Fisher, pay no attention, you'll get no
constuctive advice or helpful information from him. Only slander, and
put downs. Qualitys we all look for in the teachers of our children?

> K1OIK My daughter (KA1VBQ) says about having her license,
> Cape Cod "it is the ONE part of my life I am not proud of."

Is the OTHER part the fact that she is your daughter?

Tim

You need to limit the current to 10%-20% of the batteries ammp/hour
rating (for nicad and probably most others). Heat damages batteries.

You can limit the current with a LM317 voltage regulator, as long
as you run less than 1 amp. Radio Shack has them. You can wire them
up with one additional resitor to make them a current regulator.

>Oh, and my meter is unable to measure the amperage over 600MA, what
>inexpensive metering setup would be good to monitor this battery - the goal
>is to keep a trickle charger (the Micronta?) on it.

Jerry rig a 1/10 ohm resistor (you could use coil of wire).
Put it in series with battery and charger. Measuring voltage
across it will tell you the current.

2718. FS Standard C528A

Newsgroup: rec.radio.amateur.misc

I have a Standard C528A 2m/440 handheld I would like to sell.
It's clean, lightly used, and has a new battery pack. It puts out 5
watts on both bands. It comes with the manual, schematic, and original
box. I've done the keyboard mods to extend the TX/RX range. I'm asking
$300 US but will entertain best offers. If you are interested, please
email me at perry@alpha.jpunix.com.

2719. Essay Question

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-12 00:00:00 UTC
From: "Edward, III Dickinson" <eddick@worldnet.att.net>
Message-ID: <64cgot$od4@bgtnsc03.worldnet.att.net>
Source record: 186800

The following table is contained in an article in October 1997 QST, 'Official Journal of The American Radio Relay League'. The article, "What's New About the FCC's New RF-Exposure Regulations?", by Ed Hare, W1RFI, is on pages 51 and 52.

Table 1
Power Thresholds for Routine Evaluation of Amateur Radio Stations

Band (Wavelength)	Transmitter Power (W)
160m	500
75m	500
80m	500
40m	500
30m	425
20m	225
17m	125
15m	100
12m	75
10m	50
6 - 1.23m	50
70cm	70
33cm	150
23cm	200
13cm and up	250

ESSAY QUESTION

Compare the frequencies aligned with lower power thresholds with those which may be useful to Low Earth Orbit satellites. Include in your discussion the implications of non-structured communications verses a potential preponderance 'organizationally prepared' information. Discuss the ramifications of this with the potential dampening of freedom of communication throughout the world. Additionally, discuss the idea of vertically integrated information processing entities dominating the RF Spectrum. References to other recent restrictions on the airways, may be included.

As you see fit, please post this 'essay question' where it may be viewed by Radio Amateurs and interested others.

'Only the Paranoid Survive'
- Andrew Grove

'The price of freedom is eternal vigilance.'

WRT the debators, you may be correct, although I have noted that even the stauchest of those on either side have been known to moderate their stance in certain areas.

The real benefactors of the continunig disussion (as opposed to the continuing use of insults and buzzwords) are those who feel that they have not yet learned all there is to learn about the subject and are still silently formulating their own ideas.

Are these folks not the very people the debators are trying to reach?

If your one hour program is any good, why dont you go to one of the
local AM radio stations and see if they will run it for you. That way
someone will really listen to it.
Another option is to do it on your CB radio, even though illegal, the
band is trashed and no-one cares.
Otherwise you will probably get caught as all the other radio spectrum
is very valuable and monitored quite thoroughly.

If the FCC would allow broadcasting to the public by hams, their pirate problems would be solved. Who wants to listen to a bunch of old farts talking about how great their rig is and what the good ole days were like when they didn't have all these nocode techs? On top of that, a night listening to the chaos on 3950 and anybody would be scared away from hamming.

>usually detracts seriously

The whole pro- anti cw debate is just too much like the pro- anti abortion debate. Both sides are convinced of the infallibility of their logic, and can't comprehend the logic used by the other side. Thats why I believe that expressing the logic of YOUR particular side is a waste of breath. No matter how compelling your own reasoning is, it is wasted of the ears of your opposition. I have taken part in my share of these debates, on-air, and in person. And now, on internet. My observation is that no one, on either side, has changed his/her position based on the arguments presented. This is with the exception of non-coded hams who finally pass the code element and then become pro-code.
And thats why these discussions are just mental and dielectic(sp?) exercises for me. I enjoy the the intellectual sniping!

A food store opened next to the fenced-in property of a 50kw AM station near me, and from the parking lot you can see that the station has put up signs around the tower stating: Warning - Excessive RF Field Beyond this Point. There are some smaller signs that are harder to see that look like they say "high voltage." Just what would happen to some poor soul who wanders beyond that sign? I know about the theoretical and thermal concerns with microwaves, and I have gotten more than one RF "burn" from an ungrounded, high SWR ham installation, but what hazards are associated with walking up to a 50kw broadcast station at 670 khz that would cause these signs to be put up?

: charging line or something to protect the PS, or is the process of bring
: the voltage back up in the battery just unusually taxing on the PS?

A gel-cell battery of that size can draw a fair amount of current-the
current will go down when the battery is near full charge.

: Oh, and my meter is unable to measure the amperage over 600MA, what
: inexpensive metering setup would be good to monitor this battery - the goal
: is to keep a trickle charger (the Micronta?) on it.

One way to measure high current is to find a high power low ohmage
resistor(under 1 ohm is best, to reduce voltage drop).
Put the resistor in series with the battery, and put the meter across
it:simple ohms law will allow you to determine the current.
If you can't find a suitable resistor, then use a length of wire...if a
digital meter is used, copper wire may do, but if a analog meter used,
then resistance wire may be needed.

: Thanks in advance for your help!

It's about 1.5dB more than the 400w that UK amateurs are allowed.
But then we used to be allowed only about 100w on cw (150w input).

Yes.
No one should ever underestimate the capabilities of one's opponent.
The need is to differenciate between the ability and the probability.
Every morning with only a lousy Escort radar detector I blast nice quick
ride to work.Will I get caught? Maybe.I speed in truly rural areas at 4
to 5 am.Probability? slim-sofar.If I get caught,I'm not gonna cry.If I
do the crime,I'll do the time-(Points).If you are truly playing cat and
mouse with your life as the Russian General was,-Hey,he played,he
payed......Should have removed himself from the source of the
transmission.(Big hint to this News Group readers...)

I'd bet the same thing can happen with any of the current
license classes. I'd also bet it would happen with Geerals
from that same time frame. The fact that I pass a test today
does not guarantee 100% retention forever. Your example is
not proof of any cheating at all.

>Even a stab at memorization would have produced the ability to pass
>the general test then, but of course, most people won't learn to copy

Your point. Frankly I belive anyone sending Hi or CQ with
their car horn is probably biolating state law and, if not, is
causing unnecessary confusion on the road to other drivers.

>>>I do not send cq fast on the car horn if just
>>>so I can space it properly. Since most of the plates were for
>>>hams with K#XXX, W#XXX, WA#XXX, I would expect 5 wpm cw or
>>>so to be recognizable.

>>If and only if one is expecting it.

>Ordinarily, I'ld ask, but isn't CW a language? I do recognize that you
>don't argue in favor of code. I detest code, however I tend to decode
>cw sent if it's not sent to fast for me recognize letters.

If you know it is code. I never expect a car horn to be sending
CW and I suspect the majority of all hams are of that same
mindset.

Final comment, your expectation that al hams with calls
of the form: K#XXX, W#XXX, WA#XXX are not coded.
The K#XXX was available to codefree techs and all of your examples
can now be had as vanity calls to code free techs with the
opening of Gate 4.

Pardon if slightly off topic...

Looking for a replacement microphone element for an Electro-Voice model 664 dynamic cardioid microphone (not the 664a). This particular stage microphone was very popular in the 50's and 60's. I checked with Electro-Voice (in Michigan) and the replacement element is no longer available from them. It is (was) part number 8039CXX.

Please respond via email if you can be of help.

Thanks,

Mike

>is "no-contest".
>

It all depends what the "contest" is. For economic reasons, a lot of people only log onto the internet once or twice a week to collect their email. With packet, you can log on as often as you like - or stay "on-line" for 24 hours.

The shorter time that a message takes to travel through the internet is irrelevant if you're not on-line to collect it from your ISP.

It's easy to have "virtual conversations" on packet by sending several messages back and forth in a single day - only those whose internet connection costs them nothing can afford to do that on the 'net.

Hi Folks;

We are presently looking for any 2m/70cm repeaters that are no longer in operation for conversion to the commercial bands.
We are mostly interested in any Motorola repeaters, but will accept basically anything that is in good condition at this, we are expanding our present repeater system and require extra repeater units to do this.

If you can help out please email us back with your name, phone number and the location of the repeater (if still in use) and what your asking price is.
At this stage we are only interested in equipment that is located in Australia.

Look forward to any replies, and thanks in advance.

I'm obviously not K0MB, but ask old time FCC employees about the retests Conditionals took, and the passage rates in front of the "steely eyed" examiners. The conditional class required ethical hams to administer the tests. If the ham administering the test, and the examinee weren't ethical, then the license wasn't obtained by passing all of the elements for general class.

Code was a requirement that sometimes seems to have not been honored. Just as some now long term hams, used to bootleg to get code practice and build up their code speed, apparently from his Never Say Die column, Wayne Green among them, all that that supposedly passed a code exam didn't actually make it.

I'm not sure what the point of this posting was...

If the writer was trying to say that there is no code access to HF in
New Zealand, then this is not true. In New Zealand, full access to
frequencies below 30MHz is restricted to those with a valid 12 wpm
pass, or restricted novice segment access with 6wpm. Pretty much the
same as everywhere else. Pretty much as in Canada in fact, or broadly
so. I'll leave other countries to correct their own howlers.

>then what's MISC group for ?

Any subject not covered by an explicit group. DXing is covered in
r.r.a.dx; homebrewing is covered in r.r.a.homebrew; antennas are
covered in r.r.a.antenna; policy (explicitly including the Morse debate)
is covered in r.r.a.policy... and so on.

If you want to discuss something not included in the charter of one of
those other r.r.a groups, *then* resort to rram.

Certainly that amateurs have not used CW to any discernable extent for
the last number of years while volunteering their efforts would
contraindicate that it was a needed emergency mode.

Actually, one's competency in Morse code is entirely irrelevant in making
such a determination for the need for Morse code testing. Aside from the
international requirement, how does Morse code testing fulfill the
government legitimate concerns in managing the radio frequency spectrum?
It doesn't because it contributes nothing to mitigating interference
among users in the radio frequency spectrum. One does not even need to
know the Morse code in order to make that determination.

> Well, I'm "compelled" to say that CW *IS* a necessary skill for HF ham

> backup, services that cost money and only very rarely fulfill a needed
> function.

Carroll is quite correct in that other users of the radiofrequency spectrum at motivated differently than amateur radio licensees in determining their requirements. I agree that the prime motivator is economic considerations. Indeed, I also agree that they cannot afford to maintain, even as a backup, services that cost money and only very rarely fulfill a needed function. However, the certification of individuals should be similarly held to the same scrutiny - since amateur radio is no longer using Morse code while providing radiocommunication during emergencies, amateurs should not be compelled to learn that mode of communications for a mode that they do not even use as a backup.

> Ham radio, however, consists of a large number of worldwide code

> disaster or whatever else occurs, when better modes are not available or
> fail to meet the need for whatever reason. This *does* happen, and the
> liklihood does not diminish just because some persons do not feel like
> learning code as a skill.

We are not discussing likelyhoods, but realities. The reality is that amateurs do not use Morse code for emergency communications any more. Therefore, maintainence of a compulsory test of a mode that is not even used while providing voluntary assistance is woodenheadedness.

> Logic dictates that one use the best means available to solve any
> problem, including communications.

I agree, thus Morse code is ruled out.

> So, obviously code is relegated to a
> supporting or backup role in most circumstances since better, more
> efficient modes are usually available.

Since Morse code is no longer used in providing radiocommunications assistance, the concept that it has a backup role is moot. Indeed, if we were really true to our beliefs in providing the best means of communications, we should be designating other modes as a backup. Keeping Morse code as a backup spreads up too thin, and is wasteful of our efforts and resources.

> This fact is NOT "compelling
> reason" to assume that it will never again assume an important, or even
> critical, role.

The fact that amateurs don't use it defies Carroll's notion.

> That is an assumption routinely made by those persons
> who, for the most part, have not learned it and had the opportunity to
> work with it,and have little understanding of it's capabilities,
> flexibility and ubiquity.

No, Carroll is wrong on this point. One does not need to have any competence to determine that amateurs as a class are not using Morse code while providing radiocommunications during emergencies. In any case, even if Morse code was used by amateurs, let alone could be used, is not a legitimate reason for the government to demand that those wishing to operate on the amateur allocations below 30 MHz. But for the current international requirement, there is no legitimate reason for the government to demand that individuals must take a Morse code test because it does nothing to address the government's legitimate concern of mitigating interference among the users of the radiofrequency spectrum.

> Code is simply *another* -an additional- means of communication. To
> say that there is "no compelling reason" to keep it is simply
> shortsighted and uninformed.

Then Carroll is condemning us all as a class, because the amateur service is not relying at all on Morse code, whether it be for actual communications or as a backup. Even if amateurs were relying upon it as a backup, that by no means justifies its testing. It is incongruous to demand a test for a mode of of communications that is no longer used in a voluntary activity.

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur

The CW Decoder MRP37 is a "Just easy to use" Software using your PC + Soundcard to decode Morse Signals even under very weak audio conditions it performs good results!

WE HAVE CHANGED our Demoversion of MRP37 to be able to
test the Software free and instantly. In the demoversion the text
output is reduced to one large character display.
On request we additionaly provide a free FULL-function demo.
Just visit http://www.ProMail.com/~PEE or send
mailto:Polar.Electric@cww.de

If you can get 24 characyers in a row, but can't guess the 25th (having
seen the context of the previous 24 and copied the following 24), then
something is very wrong! :-)

Not exactly! While one minute of solid copy is 20%, it is not 20% to pass.
You miss one character after 24 of perfect copy, and do this again and
again, and you can still get 96% and fail!

>that enmass movement.

Again Dick, I think your arguing both sides of the fence.

We all know that FCC enforcement is a joke: they frankly don't care
what happens within our bands, they only get uppity when interference occurs
to users outside our bands. I think nearly all licensed hams would benefit
from more rigorous enforcement of the regulations. If it takes a drastic
increase in HF licensing, I think that's fine.

Unlike most people, I don't think freebanders are stupid. They know that if
they piss off too many people, their fun will be over. So, they walk that
fine line for the most part, and life goes on.

> The times a ham in this area has heard two of them talking inside the
>10 meter band and called them down on it, they have vacated posthaste.

Gee. That doesn't sound too bad. They really are an unruly bunch, aren't
they?

>'Giving' them a license to occupy HF bands would very much authenticate
>their past actions and give them tacit approval to carry it on into the
>HF ham bands. It's just as true today as ever--privileges not earned
>hold little value and generate little motivation to protect them by
>obeying rules.

I don't think anyone has been proposing "giving" free HF licenses to anyone.
That is the strawman "Agenda" that you keep ranting about, but nobody working
to eliminate code testing has proposed that. You are invited to cite
counterexamples.

> If easy HF licenses become available, many outlaws will simply become
>licensed, as many became no-code techs and occupied the Los Angeles
>repeaters, and they would surely cause the same kind of mass havoc

>throughout the HF bands. -you recall the post here by Jim Kelley a

>hearing cb'ers planning just such a move-"get a no-code license and go
>on the repeaters and 'tear things up'". You'd like to believe the fear
>is groundless but your explanation is much more so.

There are no doubt social malcontents in any activity. The fact is, if
most of the people were as godless as everyone portrays them, they wouldn't
let the lack of a license keep them from "tearing things up" now.

I have visited the Los Angeles area from time to time. The repeaters there
seem to have their bad spots, but by and large, I hear what I hear on repeaters
here in the San Francisco area: lots and lots of nothing. Massively
underutilized repeaters.

As for your "evidence", it is at best hearsay.

>Not just hard to accept, impossible. It's ignorance of history. When
>licensed, they are legitimized, and 'own' a right to operate where they
>dared not before, and do what it is that so many of them do so well.

Ah, much like your own license "legitimizes" your use of the bands?

>To
>suggest we dare allow this to take place is a sure prescription for
>further serious deterioration of ham radio.

Your attitude reminds me of a guy with a sailboat in drydock. He refuses
to paint it, but he can't take it out without doing so. So, it sits there
month after month, as the boat gets dustier and dustier....

>License requirements keep
>out more that the honest-they keep out those who have something to fear
>and those who have no one to talk to since they have no call sign to use
>since computer databases today instantly identify fakers.

First of all, the "computer databases" can be utilized by freebanders as well.
How many of you would really know if someone adopted the callsign of someone
you had never met? "Oh yeah, I am Bob!". The database says that call
was issued to Bob. Cool, he must be a real ham!

As for the "fear" element, I am reminded of the movie "Amazon Women on the
Moon". During a short sketch, a bunch of eyepatched video pirates plunder
a cache of movies. A pirate claims "Make all the illegal copies ya want
me hearties!". When the FBI warning against copying tapes plays, the head
pirate says in a farcical voice... "OOOoooh, I am sooooo scared!".

The FCC has little money and probably less interest in maintaining regulations
within our bands. Let's face it, if we can't keep the peace in our bands,
we aren't going to have peace.

> Open up licensing to all the rest of those people who are not
>interested enough to learn and earn a license and you have turned a few
>more shovelfuls from the grave of ham radio. The new licensees will do

>the rest.

Actually, the shovels that will bury amateur radio are real shovels. As more and more of our Keys go Silent, amateur radio slips into the realm of historical curiosity, rather than an interesting line of individual achievement.

2771. Digital Modes & Sound Cards

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-13 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bcf069$5ec91500$098a92d0@bitnet.bit-net.com>
Source record: 186684
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Lots of questions as I try to decide how to get back into digital modes, price (low), convenience, reliability, and flexibility are all issues for me.

I understand that there are a number of software programs that leverage readily available sound cards for some digital modes.

1. I am told that the best of these use the SoundBlaster 64AWE, is this correct?
2. I am told that there is something about the digital audio design of this board that makes it more suitable than other SB cards, true?
3. Can anyone share their experience with this software-hardware combo?
4. Specifically, what modes may be both sent and received on HF & VHF?
5. What sort of hardware interface (if any) is required between the sound card and a rig such as the Kenwood 440S for HF digital modes?
6. How does the performance compare to the KAM+ ?
7. Anything happening with newer PCI boards like the Ensonig AudioPCI sound card?

Thanks in advance!

Ed,

I didn't say that everyone who wants the code requirement eliminated breaks the rules. However, it is my opinion (from observation here) that a large percentage of the no-code posts have been off-topic for the group in which they were posted AND were cross-posted to three or more groups. As a matter of fact, the person who replied before you has done this on numerous ocassions and continues to do so.

And, I didn't imply that all no-code poster(s) don't follow the rules; I said " . . . it is my observation that they tend not to comply with rules . . ." Which is an accurate statement because that is what I have observed from the numerous postings to the newsgroups which were posted in the manner that I have described above.

I do agree that posts regarding getting a group "back on track" are appropriate for that group.

So, you be the judge: when posts on "no-code" appear in .misc, both .scanners and .equipment on a regular basis with many cross-posted, are the posters following the generally accepted "rules"?

Bill

That really depends on what the 25th character is a part of.
If it is a callsign, then there's no easy answer. Likewise,
if it was a part of a numeric sequence, the actual digit
may not be obvious at all.

It seems to me that it takes at least two sides to have a debate.
For every no-code advocate there is at least one pro-code advocate,
both of whom are cross-posting. Or do you believe that an initial
violation of "courtesy" or "protocol" justifies further violations?
It also seems to me that there were recent threads on r.r.a.m.
titled "Morse is here to stay!", "Quit whining", or some such. One
presumes that the initial posts were from pro-code advocates.

Yes, Dick. You've dragged my quote out before. The fact is, that basically nobody wants to talk to a lid. These guys give up in short order, and the band returns to normal. There are no more bad guys on VHF than there are on HF, although they can be more disruptive on FM than on SSB or CW. The "easy" license you talk about already exists according to some, and the reported death of the VHF+ bands and ham radio was definitely premature.

When the lights go down on the city, and the control ops have all gone to bed, the 435 repeater is alive, with real QSO's and callsigns, and some semblence of order - albeit less so than the others. And the ops there still run some CB. [kind of an eclectic mix of Journey, and Home on the Range :-)]

I wouldn't use that repeater, but I'll listen to it from time to time - and it can be entertaining. These guys are not dummies. I think it may even have been you who said that you were mildly entertained by 14.313 on occassion. It's all radio, man. The "handles" have been changed to protect the innocent. The attitudes seem to change a bit with time as well. Ham radio is a new ball game for these guys - the rules, and objectives are different, and they soon come to know it. The foul habits change like the weather, or with the full moon. But even in LA, ham radio goes on - basically as usual. Thank god it's no problem to QSY to a clear frequency - and that if they follow you to HF, they can't do as much damage to you.

Some of the good things about ham radio are, that the chances of a knucklehead running 100 times your power are much less, we've got more than 40 channels of room to use, we lack the anonymity of CB, and obviously we have to pass tests to operate on our bands. These things make a really big difference, which you have a tendency to underestimate.

You aren't going to change a foul attitude with a ham test Dick. In fact, I'd say there is some evidence around here that you might just create one.

>> Like an ordinary fence, license requirements only keep out the honest.
>> Those with no respect for law easily climb over. But they haven't done so,
>> and that can only be because we have nothing that they really want. This
>> seems hard for some amateurs to accept. But the truth is staring them
>> in the face. Most of the outlaw CBers consider amateur radio *boring*.

>Not just hard to accept, impossible. It's ignorance of history. When
>licensed, they are legitimized, and 'own' a right to operate where they
>dared not before, and do what it is that so many of them do so well.

I know what you mean, it's like they own the frequency or something. I always wondered about the welded VFO crowd. Now you tell us they're all CBers. So THAT'S the explanation!! Very interesting. "Please QSY! No, YOU QSY! I've had the frequency since 1978. No, YOU!" So, Dick. What was it you were saying about the code test?

>To
>suggest we dare allow this to take place is a sure prescription for
>further serious deterioration of ham radio.

Perhaps now you're talking about the lack of enforcement. I couldn't agree more!

>License requirements keep
>out more that the honest-they keep out those who have something to fear
>and those who have no one to talk to since they have no call sign to use
>since computer databases today instantly identify fakers.

But you would go ahead and talk to a lid simply because he had a callsign? I'm not quite following you here. Fear works in either case Dick - with or without a callsign. Of course with a license, you have more to lose I suppose.

>Open up licensing to all the rest of those people who are not
>interested enough to learn and earn a license and you have turned a few
>more shovelfuls from the grave of ham radio. The new licensees will do
>the rest.

Were we talking about abandoning licenses and testing, you would have a excellent point. Since we are not, you don't.

Hello everybody,

My name is Erik Meijerink. I am a Dutch copywriter. On behalf of the Dutch Radiocommunications Agency (de Rijksdienst voor Radiocommunicatie, RDR)I am writing a brochure about amateur radio. Since I am not a radio amateur myself (shame! :-) I would very much like to hear from all of you (well, not *all* of you..) why you are a radio-amateur, what made you become a radio-amateur and why you will always continue to be a radio-amateur. Answers via e-mail please.

Also, I'll be attending the 'Dag voor de amateur' this saturday (I'll be the tall (6'2") guy wearing a RDR-badge). So if you are there, and want to share your thoughts and insights with me, please do! I very much appreciate your input.

Thanks in advance,

Erik Meijerink

You still miss the point. Instead of ,"easy licensing" use the term
,"relevant testing".

> If easy HF licenses become available, many outlaws will simply become

If relevant testing were used many technically inclined people would start
drifting back to ham radio, ending its condition of being an historical
society.

> couple weeks ago where he recounted a ham-former-cber who told about
> hearing cb'ers planning just such a move-"get a no-code license and go
> on the repeaters and 'tear things up'". You'd like to believe the fear

can't do without the obligatory no-code bashing, can you

> Open up licensing to all the rest of those people who are not
> interested enough to learn

Point 1

A ham radio license is open to nearly everyone.

Point 2

The litmus test of a willingness to learn certainly should not be, a desire
to memorize a certain obscure code.

>from that same time frame. The fact that I pass a test today
>does not guarantee 100% retention forever. Your example is
>not proof of any cheating at all.

The retesting usually occurred within 3 or 4 years of the original exam. I also note that these were not snap tests of the material, but retests, with lots of notice. One would assume that a ham who was shaky on the material, or wanted a license in good condition would review the material. Given three weeks, I'm sure I could prepare for a set of amateur exams now, and in those days all one had to pass was one exam, the exam for general. There were also study guides available then, and sample circuits for using to answer any question on circuit design like what was a Colpitts oscillator, or Hartley oscillator.

CW is a little trickier, although frankly, once again most people, who have managed to copy at let's say 13 wpm, should be able to practice enough in that time to once again pass. The exam material didn't change rapidly in those days, and note that many of the Conditional class licensees did pass and become General class License holders, it's just that all too many couldn't copy code.

I also note that the Dick Bash hams, at least the ones who used Bash's code help, probably still haven't learned CW, and some of them have Extra tickets. Bash is a good part of why the question pools for exams were released, although another part is the Freedom of Information act.

I finally note that from my perspective, it's pretense on the part of many hams that CW as part of the testing process does anything for amateur radio. Amateur radio has to find some way of attracting people who experiment, and play with things for long periods of time. Most of the long term hams had to learn cw to be hams, but unfortunately all too many have moved on to other interests, and aren't enthusiastic about attracting newcomers. Thus I can scan 20 repeaters, record with a 30 minute on one side tape all that happens on those 20 repeaters, and still have enough tape for tomorrow. Similarly, it's possible to tune through let's say the 40 meter Novice/Tech+ cw section and not hear folks trying to compete with broadcast stations, something which wasn't true not all that long ago.

I have examined the gel-cell battery that so many were so kind in answering my charging questions about, here are the details - I wonder what they say most specifically about getting it up to full charge from the current 11v state, and what sort of regulation of the ongoing float charge is advisable? (It will be powering a TS-440SAT, and perhaps a couple of small periperals, e.g. NIR-10 filter, etc. through a MFJ 12V power strip.)

Johnson Controls Model: Dynasty UPS 100 12 Volts
Charging Voltage: 13.5 - 13.8 vdc @ 77 degrees F
Equalize Charge Voltage: 14.4 - 14.8 vdc @ 77 degrees F

What is the difference between the two and how does that impact proper charging protocol, please?

There was a noted case not many years ago about a Colorado pirate who was busted while mobile in th empty reaches of Colorado's eastern plains. So you COULD be caught if FCC was of a mind to enforce anything.

Just to clear up a point, I wasn't talking about the Boston ARC's team (of which I'm a part)... We use the standard ARRL code exams and (unless asked by an examinee) check the multiple choice questions first, and the perfect copy if they miss more than 3 questions. I've seen that happen by someone who blanked out totally for the first 4 minutes, and got perfect copy for the last one.

You do bring up a good point; check out your team before going for an exam - they do vary greatly.

So in Canada we can use +33.52 dBw, but in the US we're limited to
+31.76 dBw, for a total difference of 1.76 dB. Doesn't seem like very
much.

In response to Cecil Moore,
Cecil, in all honesty, you can barely "guarantee" your own name.
Both the Ameco and ARRL License Guides carried disclaimers
concerning the nature of the questions in their guides. That is
to say, both make it clear that the exact Q&A are not included
in said guides. Thus, you can say what you wish, and even
believe it, but the documentation doesn't support your claim.
I believe you're trying to say that the theory exam structure
of today doesn't need an overhaul because exams have always
been the same re: the study guides. Think again.

> that enmass movement.

Why should it? And, if it did, what's the problem?
Consider...
Outlaws are mostly outbanders. Why? because they can't use the sanctioned CB channels because they are too crowded. They can't use the HF Ham bands because they are too well enforced. So they outband, which is the sole reason they are outbanders. Most will not move to a sanctioned band, simply because they like the "outlaw" image.
However, what's the fear of them using the HF bands? They aren't full (I listen, and I'm telling you they aren't full. I know.) So what's the problem with them using (legally) the Ham HF bands? "They talk." So do you. "They try long distance contacts." Like you don't? Hell, the ARRL runs contests for just that purpose.
Let's face it, the people you want to keep out pose no real problem or threat. In fact, they will help the HAM hobby, as the HAM bands are so little used that the FCC is being asked to take them away and allot them for commercial use. You HAMs need all the help you can get!
As for morse code, a requirement for its use is fine, if you want to use it. But if not, then why? Saying that it will get out when you are stuck in a basement etc., only works *if you are a HAM*. And they are so few as

to be significantly unimportant. (Sorry if this offends, but facts are facts. Not enough HAMs will be stuck in a basement with the equipment needed to make a spark gap transmitter to make a difference.)
CW is nice, I suppose, if that's your thing. And nobody is saying you can't use it. If you want to, bang away. Fine.
But saying that CW requirements will keep out the riff-raff is bullsh*t. Listen to yourselves sometime, and you will see what I mean. The HF bands are full of racist crap, other people blithering about their latest cable change, lengthy discussions about whether an antenna rotator should have 1, 2 or 3 degree stops, half-hour weather reports, and other stuff that grown people spend thousands of dollars on hardware to send by radio so they can save a few stamps. Fine. That's what hobbies are for (I'd hate to add up how much I've spent on computers...). But to think that the HAM hobby is somehow holy enough that the unwashed should be kept out is uncalled for. Especially when they are already there.
But that's just my opinion. What do I know?

>
>
And I'll bet you actually think that's right, don't you?
Guess what? You're wrong.
The Morse Code requirement is there for one reason only: The US is a signatory to a treaty that requires it for Amateur Radio (non-commercial) transmissions that significantly cross international borders.
That's why the No-code license grants privelidges on the bands it does: they are line-of-sight.
CWE has absolutely nothing to do with promoting the hobby. It acts instead to keep people out. And the only ones who think that's OK are those elitist people who think that somehow the Amateur Radio hobby is so holy that the riff-raff needs to be kept out.
Well, after listening to the crap that flies on HF, I can say this: it ain't that holy.

I have personally witnessed it more than once. Losers who find a doctor that will write them an excuse slip so their patient doesn't have to learn Morse code like the rest of us. I know you still have to know some code even with the "handicap", but everyone I know who bragged about how they got extra class sending 5wpm had an integrity handicap, not a physical one. Some of these people I looked up to, before I knew. I thought that if they could do it, I damn sure could. Little did I know.

> are not here. This fear is groundless.

You left out a few crucial points. For one, since all the 'outlaws'
are likeminded, and talk only to each other, there is no incentive to
move into a ham band unless there is an movement enmass, after all no
sane amateur is going to talk to an illegal so they would be without
anyone to QSO if one came alone. And if the enmass movement takes place,
that would be a very major and serious action sure to bring down the
wrath of the entire amateur community, possibly even building fire under
the FCC's rarely used enforcement mechanism. Easy licensing will bring
that enmass movement.
The times a ham in this area has heard two of them talking inside the
10 meter band and called them down on it, they have vacated posthaste.
'Giving' them a license to occupy HF bands would very much authenticate
their past actions and give them tacit approval to carry it on into the
HF ham bands. It's just as true today as ever--privileges not earned
hold little value and generate little motivation to protect them by
obeying rules.

If easy HF licenses become available, many outlaws will simply become
licensed, as many became no-code techs and occupied the Los Angeles
repeaters, and they would surely cause the same kind of mass havoc
throughout the HF bands. -you recall the post here by Jim Kelley a
couple weeks ago where he recounted a ham-former-cber who told about
hearing cb'ers planning just such a move-"get a no-code license and go
on the repeaters and 'tear things up'". You'd like to believe the fear
is groundless but your explanation is much more so.

> Like an ordinary fence, license requirements only keep out the honest.
> Those with no respect for law easily climb over. But they haven't done so,
> and that can only be because we have nothing that they really want. This
> seems hard for some amateurs to accept. But the truth is staring them
> in the face. Most of the outlaw CBers consider amateur radio *boring*.

Not just hard to accept, impossible. It's ignorance of history. When licensed, they are legitimized, and 'own' a right to operate where they dared not before, and do what it is that so many of them do so well. To suggest we dare allow this to take place is a sure prescription for further serious deterioration of ham radio. License requirements keep out more that the honest-they keep out those who have something to fear and those who have no one to talk to since they have no call sign to use since computer databases today instantly identify fakers.
Open up licensing to all the rest of those people who are not interested enough to learn and earn a license and you have turned a few more shovelfuls from the grave of ham radio. The new licensees will do the rest.

I'm not sure who you mean by "these guys" since people who are adamant
about keeping and enforcing current ham radio rules have sinned against
Usenet as much as anyone. No one here seems to be a strict
constructionist when it comes to netiquette, at least not in practice.
(That includes me, but I resolve to do better!)

>PS Don't hold your breath!

I won't. That sort of thing can be hazardous.

In response to Carl Stevenson,
You've missed the point yet again, Carl. The point is:
the exam structure ISN'T going to be fixed. And as
long as it isn't going to be fixed, it's not necessary
to pass a tech exam to show technical competence. The
system is screwed up, as you say. But it isn't going
to be overhauled. If it were, it would already have been
done.

In response to Gary Coffman,
Lying sucker! No wonder the no-code movement's going nowhere.
The context of FCC's discussion with Vic Clark is that they
had had their fill of ARRL trying to get Incentive Licensing
into place, as _I_ plainly explained to YOU previously.
Incentive Licensing had to do with increasing the tech
requirements of the Amateur Service, which ARRL dropped the ball
on because they didn't grandfather hams into Extra Class from
General, and found themselves making concessions to the Generals
up and down the line. Morse had absolutely nothing to do with the
issue.

I've said it before and I'll say it again. Those involved
in the no-code movement will say whatever they have to in
order to get their agenda by. But you can play as rough
as you'd like, Gary. It's your waste of time. You'll leave
this newsgroup before I do.

For my part I had great pleasure last summer to contact U.S. amateurs
from my sailboat with as little as 10 Watts output ... in Morse of
course.
I like CW (Morse) because it is KISS (Keep It Simple, Stupid), just like
anything else I install on board.
Of course we will soon have global cellular phones (Inmarsat, Iridium)
and there will be no more need for the MF, HF and VHF bands. Just as the
invention of the automobile has stopped people from riding horses, or
the invention of the marine engine has removed all sailboats from the
earth, or the snow-scooter has prevented people using ski. Get my drift?

I am after a 600 ohm pot 1.5 watt so that a repair can be made to an
Emotator rotator.
Should you have one surplus to requirement this would be great.
Or perhaps you might know of a source for some.
Any information will be appreciated.

From: jkane@earth.execpc.com
Message-ID: <64hshpabi1@earth.execpc.com>
Source record: 186628

I am lookiong for information on getting into ATV.

First, I see that all I need on the receive side is a calbe ready TV and an antenna to run into the cable in connection instead of CATV. Is this correct?

Now for the transmit side, is there a way to use a handheld FM somehow? In my case specifically an Icom w32a. I don't see how it could be made to work, but maybe there is some thing else that would work.

The transmitter needs to be DC powered and portable. Is this normal, or most of them AC types?

Any one who has something working could email me a description of their rig. It would be most appreciated.

Thanks,

Hi over there

Does anybody know something about Yaesu ft411e transceiver?
I have this model and it has three buttons on the left side: Lamp,
Tone, and PTT. The problem I have is that the Tone button does'n make the
trx
transmitting repeater opening tone (about 1700hz) but it acts as short
openning for squelsh. Is there away to make the button act the Tone role ?

many thanks

>close to 14,400 bps full-duplex on an exclusive channel.

Hi Walt, I think you will see that packet is not time divison
multiplexed. Its carrier sensed multiple access! In TDM each station is
allocated a 'time slot' to send traffic, but that is not the case in
packet. each station waits until the channel is clear using the carrier
sense and then waits a pre-determined time before transmitting.

Hope you're well Walt!

Not only that, but if it passes (I have not been watching it that closely),
you have to think about who has a majority in congress! That means it is
the republicans who will be making it a law. Not the democrats. They
can't stop it from happening, only the republicans can do that. Think about
that for a minute before bad mouthing an organization.

Vote independent next time. Maybe we can shake 'em up enough to get them to
listen to us the people for a while at least. Better yet, Run for office!

Hi Mr. Pratt Jr.

Have you ever considered a reading course. Gary's callsign is part of his email address it seems to be a 2X2 call. In the 4 area this generally indicates an Advanced Class ticket. If you got off your dead butt and checked a callsign database you might find that that is the class of license he has. Can't you pro code test weenines come up with something better than the old "want something for nothing" crap?

Sir,
Some of us really CAN'T learn the Morse Code at ANY speed, I, have
tried for the past 23 years to learn the code at the "bare bones minimum"
speed of 5wpm, and can't do it at even the "snail's pace" of 1wpm this is
not due to lack of trying, I have tried every method out there, it is not
due to laziness, I have tried training periods fron 1/2 hour to 5 1/2 hours
over periods lasting from 6 weeks to 3 months every day. I'll be a very
happy individual on the day the FCC decides to drop all code requirements
for the H.F. portion of the spectrum, in favor of tougher written exams.

It doesn't need to be offical. It's just one person asking another to join an organization. You would be doing the same thing when you ask a new ham in your area to join your local radio club. Now, if you want an offical invitation to join AMSAT, I'll have one of the board of directors send you a special e-mail or if you would like, I can have Martha send you a AMSAT membership application by mail.

I think the clever play on words is confusing some folk.

"ARRL got you down", meaning that on the surface of the planet, the ARRL tends to care for ham things (at least that is their intent and purpose), and "Join AMSAT" suggests that if one wants to play a part in the organization that deals with things one sees when one looks "up", one needs to join AMSAT (perhaps in addition to the ARRL).

Cute, but probably needed a preface in the original post to help those of us who tend to be more literal (left brainers) catch up with the artistic license of the more literary (right brainers). Neither is better, just different!

I thought it was cute, but then I tend to float fairly readily between right and left brain approaches ... have to, I'm a counselor and pastor!

The old man was walking on the beach, where many starfish had washed
ashore.
He saw a little boy on the shoreline, throwing them back into the ocean.
The boy said 'They'll die if I don't get them back into the water.'
The man said 'Son, there are hundreds of starfish ashore. It's not going
to
make a difference.' The boy picked up a starfish and threw it into the
water.
He turned to the man and said, 'It made a difference to that starfish.'

Bill, have you noticed, you don't hear that "HF crap" you mentioned on CW. One of the reasons CW fans are so fond of that mode is that others who engage in that mode tend to be much higher quality folks than the SSB mic button pushers. On CW, you get real QSOs with real people (some CW DXer/contesters excepted).

Thanks for this info! I did not know that there WAS such an
organization. I will make sure this info gets to everyone in our Ham
club, which by the way, consists of all no-code licenses except for one.
(He took the exam a few weeks before the code was droped for the Tech
license, so had to learn it. He does not, nor ever has used it though,
and doesn't remember the code anymore anyhow.)

I don't know anything of KA9Q's amateur equipment construction achievements, but his professional activities are outstanding.

Unfortunately, we all make occasional mistakes, and either the remark quoted was taken out of context, or a great man momentarily slipped up and uttered a generalisation so wide that it neglected the freedom of others to find different things interesting.

I see nothing wrong with people deriving pleasure from building duplicates of other people's designs, of ultra-simple transmitters or whatever takes their fancy. One friend is building a complete replica of a 1930's racing car. Is it high tech? NO, has it been done before? YES. Does he find it interesting? He says so, and as I cannot read his mind, I have to take his word on it. It's his hobby, and a number of other people act as if they find it interesting to watch his progress.

I get my fun from the development of amateur radio equipment that stretches the state of the art a little. I am the but of a few jokes about "David only comes on the air to check a new rig", but at least the jests are made with a good sense of humour. If I give myself the right to make scathing remarks about other people's interests, then I must give others the right to make similar remarks about what I find interesting.

For each of the past half-dozen years, I've given one of the lectures at the G-QRP club's annual convention. Now, these people are right at the centre of the simple-transmitter-and-CW universe. They show all the signs of great interest and enjoyment in what they do. Because of these talks, I've found that they also are interested in things like noise-shaped fractional-N frequency synthesis, DSP, etc etc.

Cheers

>
> 1. I am told that the best of these use the SoundBlaster 64AWE, is this
> correct?

If you're only going to use the soundcard for ham modes, the SB 64AWE is a
useless waste of money, since all the ham modes software I know of only
uses PCM audio I/O ('wave'). So the elaborate MIDI synthesizer stuff
is useless.

For PCM I/O, SB cards aren't too good, as they tend to distort the signal
phase with their "bass/treble" settings in the mixer chip.

You're probably better off with a cheap card that uses a chip like
Crystals CS423x.

> 4. Specifically, what modes may be both sent and received on HF & VHF?

It depends on your OS :-) I've personal experience running 1200 baud AFSK
and 9600 baud FSK on UHF, and Amtor (Sitor) and Pactor 1 on HF under Linux.

> 5. What sort of hardware interface (if any) is required between the sound
> card and a rig such as the Kenwood 440S for HF digital modes?

Some circuitry to operate PTT, such as a transistor connected to a serial
or parallel port and the PTT line of the rig.

> 6. How does the performance compare to the KAM+ ?

I do not own a KAM; however the KAM has a hard decision demodulator,
so I'd expect performance on HF to be slightly better with a soundcard.

> 7. Anything happening with newer PCI boards like the Ensonig
> AudioPCI sound card?

I'm on a wait and see attitude, especially wrt to Intels AC98 (AC stands
for Audio Codec) standard. It is rumored that future Pentia will have
an AC link port builtin.

Thanks for taking the time to read this message.
I am after a source for spare parts for an Emotator Rotator
Model 1102 MXX.
Or perhaps you might know of the address in Japan for
EMOTO ANTENNA MFG. LTD
Unfortunately the manual I have here does not have any address in it.
Spare parts for this model appear to be rare here in Australia,
however my friend and I are prepared to try and obtain spares from
Japan if necessary.
Any help or information would be appreciated.

A real good thing about CW is that you can have more international qso's -- you know the goodwill thing -- with hams who do not speak English than you can with any other mode...well without having to purchase additional expensive equipment.

Your "cute" subject line clearly suggests that AMSAT might be a substitute for ARRL if "ARRL got you down". Perhaps that was not your intent, but that is the "message" that many will draw from your unfortunate choice of words.

Given the historic support (including millions of $) that ARRL members have given to AMSAT, it seems unlikely that AMSAT would like to be viewed as a "substitute" for ARRL.

ham@w3eax.umd.edu (Scott Rosenfeld [NF3I])
shared these priceless pearls of wisdom:

(Snips of ITU urls)

->&#65533; 3. (1) Any person seeking a licence to operate the apparatus of an
->amateur station shall prove that he is able to send correctly by hand
->and to receive correctly by ear, texts in Morse code signals.

Okay, if you really believe that this is a requirement (and I'd argue that there are good legal precedents that this is not so) then are you willing to accept an unrestricted HF license with a decent theory, practical, and regs test with a one-word-per-day code requirement? I'll buy that, and I detest the code as much as anybody.

Since it is not ITU-written that the code test shall be 20 wpm, 13 wpm, or 5 wpm, or even 1 wpm, then these numbers are artificial barriers that you are willing to allow to exist. "One word per day." What a concept.

Or are you justifying an elitist requirement that has absolutely no bearing on an individual's contribution to the "public interest, convenience, and necessity" that is the guts of why we still have billions of dollars of bandwidth?

Jim

OFF-TOPIC Material, in proof:

Why Engineers Don't Write Cookbooks

Chocolate Chip Cookies:

Ingredients:

* 1.) 532.35 cm3 gluten
* 2.) 4.9 cm3 NaHCO3
* 3.) 4.9 cm3 refined halite
* 4.) 236.6 cm3 partially hydrogenated tallow triglyceride
* 5.) 177.45 cm3 crystalline C12H22O11
* 6.) 177.45 cm3 unrefined C12H22O11
* 7.) 4.9 cm3 methyl ether of protocatechuic aldehyde
* 8.) Two calcium carbonate-encapsulated avian albumen-coated
protein
* 9.) 473.2 cm3 theobroma cacao
* 10.) 236.6 cm3 de-encapsulated legume meats (sieve size #10)

To a 2-L jacketed round reactor vessel (reactor #1) with an overall heat transfer coefficient of about 100 Btu/F-ft2-hr, add ingredients one, two and three with constant agitation. In a second 2-L reactor vessel with a radial flow impeller operating at 100 rpm, add ingredients four, five, six, and seven until the mixture is homogenous. To reactor #2, add ingredient eight, followed by three equal volumes of the homogenous mixture in reactor #1.

Additionally, add ingredients nine and ten slowly, with constant agitation. Care must be taken at this point in the reaction to control any temperature rise that may be the result of an exothermic reaction.

Using a screw extrude attached to a #4 nodulizer, place the mixture piece-meal on a 316SS sheet (300 x 600 mm). Heat in a 460K oven for a period of time that is in agreement with Frank & Johnston's first order rate expression (see JACOS, 21, 55), or until golden brown. Once the reaction is complete, place the sheet on a 25C heat-transfer table, allowing the product to come to equilibrium.

To all radio amateurs

SB PROP ARL ARLP046
ARLP046 Propagation de K7VVV

Last week's major geomagnetic storm was really confined to Friday, when the global A index went clear to 45, and global K indices went as high as seven. This was from the Tuesday, November 4 solar flare, and the later flare on Thursday didn't seem to have an effect, indicating that the energy was probably aimed away from Earth. Protons from these disturbances produce an effect a few days later, and the Thursday event didn't seem to bother conditions over the weekend. On Saturday the global K index dropped down to zero.

Solar flux backed off also, and was soon below 90. It perked up again to the low nineties on Tuesday. Watch for solar flux to rise to 92 or 94 this weekend, then above 100 around November 26, above 110 by month's end, and below 100 by December 4. Unstable geomagnetic conditions may return around November 20-23 and December 3 and 4. This is based on the last solar rotation, and can change at any time. For instance, the last 27 day outlook from NOAA released on November 11 showed flux values around 80 from November 14-20, but then new regions 8106, 8107 and 8108 appeared on the solar surface, and now forecasts are looking up.

Expect good conditions during the ARRL Phone Sweepstakes this weekend.

Sunspot Numbers for November 6 through 12 were 60, 60, 61, 40, 28, 28 and 26 with a mean of 43.3. 10.7 cm flux was 105.3, 94.4, 89.6, 86.4, 89.4, 91.5 and 87.2, with a mean of 92, and estimated planetary A indices were 12, 45, 4, 9, 10, 6, and 3, with a mean of 12.7.

Here are some projections for domestic paths for the ARRL Phone Sweepstakes this weekend:

From California to the Northeast United States check 80 meters 2330-1300z, 40 meters 2200-0100z and 0500-0930z and 1130-1500z, 20 meters 1500-2100z, and possibly 15 meters around 1800-1900z.

From Southeast United States to California check 80 meters 2330-1300z, 40 meters around the clock, with the strongest signals from 0030-0200z and 0600-1000z, 20 meters 1530-2130z and possibly 15 meters 1800-1900z.

From Ohio to Texas check 80 meters 2100-1430z, 40 meters very strong around the clock with the strongest signals from 2330-0100z and 0600-0900z. Check 20 meters 1430-2130z. 15 meters may open around 1800z.

From Seattle to the central U.S. check 80 meters 2230-1530z, 40 meters around the clock, with strongest signals 0030-0300z and 0700-1330z, and 20 meters 1600-2330z. 15 meters may open 1800-2130z and looks promising around 1930z, and 10 meters might open 1900-2000z.

From central U.S. to Hawaii, check 80 meters 0300-1430z, 40 meters 0200-1530z, 20 meters around 1600-2330z and 0130-0230z. 15 meters looks very good 1730-2330z, and 10 meters from 1900-2030z.

Wow! That's a killer story, and certainly proves beyond a shadow of a doubt that Alinco is junk. Now, I will save bandwidth on the Internet and proclaim the following:

**********Every product ever manufacured should be considered junk!**********

This is using your brand of logic...that every product that ever has a defect within 15 months of its manufacture is junk. And since I know this, and also have heard all kinds of unverified tales of this service department or that repair department being bad (and being a sap I believe every one of them) NO MORE ANYTHING IN MY SHACK!

There...I feel better too.
Dave

Hi over there

Does anybody know something about Yaesu ft411e transceiver?
I have this model and it has three buttons on the left side: Lamp,
Tone, and PTT. The problem I have is that the Tone button does'n make the
trx
transmitting repeater opening tone (about 1700hz) but it acts as short
openning for squelsh. Is there away to make the button act the Tone role ?

many thanks
Bogdan sp8ufn

ARRL Bulletin 68 ARLB068
From ARRL Headquarters
Newington CT November 14, 1997
To all radio amateurs

SB QST ARL ARLB068
ARLB068 WRC-97 Heads Into Final Week

The third week of the four-week 1997 World Radiocommunication Conference in Geneva drew to a close with no unpleasant surprises for Amateur Radio. The Allocations Committee, Committee 5, has not yet completed its work on matters relating to ''Little LEOs'' as advocates of the service continue to look for support, but the focus of discussion is not on the amateur bands.

Next week, the committees must finish their work early so that their recommendations can be taken up in plenary meetings. Conference decisions are firm only after second reading in plenary. Delegates will be spending long hours examining long documents in great detail to make sure nothing slips by unnoticed.

4U1WRC has been more active this past week. Amateurs interested in WRC-97 may wish to visit the Web site maintained by the International Amateur Radio Club at http://www.itu/int/radioclub/. From there, links will take you to more information on 4U1WRC, 4U1ITU, and WRC-97.

Source record: 186759
Cross-posted to: rec.radio.amateur.misc,alt.ham-radio.atv

S. Piper:

The 439.25 frequency you mentioned is a ham ATV frequency. There is no way your hero could transmit to the whole world on that frequency. If he <could> transmit to the world on that frequency, few people, if any, would see it. Downconverters are extremely rare among the general population, and you need a downconverter to see the video.

A technician class license is all you need to legally transmit ATV; however, your protagonist seems intent on breaking the law in some fashion in any event.

You could try to fake it with a sporting event. Depending on the number of transmissions, it may involve some travel. In season, baseball, football, basketball, beach volleyball, etc. are available and you could pretend that your hero can override a satellite broadcast with an ATV signal for a couple of minutes. Transmitting for five minutes in a moving vehicle would prove impossible to find. Don=92t forget to keep that antenna aimed at the target!

You will still would have the world-wide audience problem. There are too many countries, languages, time zones, and satellites to make it work in real-time. So unless this is science fiction, you will have to lose the real-time aspect. If the message has global significance, it will be reported locally, albeit with a local time delay. This would solve the language problem. =

Good luck!

Michael

In response to Bill Sohl,
You miss the point yet again. The government has abdicated from ham radio. That's why exams are given by volunteer hams.

You see the result.

The result can be improved. But only by the volunteer organization now. Because the government doesn't care. WE are now the government, and have been since FCC abdicated. It's just a matter of stepping in and doing what needs to be done, more directly than through politicans.

Regards,
Vince, WB2EZG

I'd like to acquire a few copies of some early PC magazines. Kilobaud,
Byte, Interface Age, etc. Looking for some issues dated around
1976-1979. Bound issues of Byte magazine also.

>I had an Alinco 2 meter for 15 months and it went south,

Etc..
What is a "2 meter?" All I see here are adjectives, and no noun. I hear this useage more and more on the air, too. A 2 meter RADIO? A 2 meter ANTENNA? A 2 meter length of patch cable?

Mike, try not to let thhis get under your skin in particular, but I have been speculating on where this useage comes from, and here is my theory:
Once folks bought"CB radios." Over the years this got shortened to the point in common useage that the "radio" or "set" got dropped, and folks just got themselves a "CB." Now, moving over to ham radio, and 2 meters in particular, in large numbers, these guys got themselves a "ham," just like their old "cb." Whereas in the ham service we still had "2 meter rigs," this useage was surplanted by the waves of previous cbers. And since the law of averages apply to QSO's, the new ham/excber was most likely to have a contact with another ex-cber, the useage got reinforced.
In the same way, CB useage is working its way onto all the ham bands. Its not unusual to have some one offer you his "Personal" on the air. This is, of course, what hams refer to as a "name," or "handle." But on 11m, the "handle" was regarded with scorn, since it was used to identify the A.M. user in place of a call sign. Proponents of ssb, in particular, on the Citizen Band and above, wanted to distinguih themselves from the herd, and somehow landed on "personal" as the way. Again, comming onto 10m in large numbers, these hams passed the cb useage back and forth until it has taken root. Now some of these guys have been on for a long time, and aren't likely to change.
Funny how this takes me to twisted "Pro-Code" arguement, of sorts. When the flood-gate opened to no-code Techs, a tidal wave of them arrived. It was too large a group to be assimilated into the existing ham ranks. This new group, from the "elite" of the Citizen Band, were pretty convinced from their years of operating, that they knew what they were doing. As a result, they were unreceptive to correction from hams, and, as they grew in numbers, have passed their old CB useages back and forth enough, for long enough, that getting things changed around is probably a lost cause.
For the benefit of other old timers on frequency, who may have been confused by other new useages, I present here a lexicon of new ham expressions. "By their words wilst thou know them."
"Antron 99"...The vertical antenna of choice on the lower voice portion of of 10m. Apparently this CB vertical has low enough
Q to be useable on several bands.

"Back on out"...To stop transmitting, and, usually leave the air. Similar to "making my final," or clearing.

"Beams"...A pointless pluralization of the singular, "beam." I suspect that it was pluralized because it has more than one element.
Incidently, "Beams" may be either on "The Flat Side", or horizontally polarized, or on"The Vertical", and you can guess what that means
"Bleed(as in "bleeding on you")...Interference with communications by a strong adjacent signal. Same as "splatter."
"Call(as in " KC0ABC call..")...Calling
"Channel"...a holdover from the dayes when CBers stayed of the legal frequencies permitted to them on 11m. Now commonally applied to a numbered memory location on a 2 meter.
"Copy"....means "received." Often the second prefered useage is "QSL." QSL?
"Copy That!".... See "Copy," with feeling! Implies agreement.
"CQ"... A way to call your buddy, as in "CQ KC0ABC, KC0ABB call"
"CW"....unused, mysterious
"Dead Key"... a carrier without modulation. Prefered useage is on a frequency where a QSO is already in progress. A means of showing disapproval.
"Destinated"...Arrival at a predetermined location.
"First Personal"...See "Personal". This is the first one. I guess some people give their last names, so you need a way to ditinguish.
"HF or HFer"...Frequencies below 30Mhz, or someone who operates there.
"Ham"... A licensed radio service, or the license itself. As in, "say, Bandito, you got your ham yet?"
Also, the equipment used on this service, as in "wait til you see my new Alinco 2 meter ham!"
"Handle"....The old CB moniker, used before you get your ham, and start passing out your presonal, instead. As in, "Yeah, K0ABX, I used to be that one Bandito."
"Hitting You(as in"how am I hitting you?"...Request for a report of received signal strength. See also"Pounds."
"I Heard That"... your transmission was received, and agreed with.
"Lower Side"...LSB
"My Up-Grade"...Something everyone on the 2 meter is trying to get. Because it is connected to the before mentioned mysterious CW, they are very hard to come by. (See also Waivers).
"OK"... used in place of "Over," as in "Yeah, your pretty close to me, OK"
"On The Side"....Similar to "backing on out," but implies that the user will not be clear, but will continue to listen.
"Opened Up"....Refers to a rig that has been modified in such a way as to permitt transmitting on frequencies not authorized. Very popular on CB to operate at, say 28.105 Mhz. The value of a radio that has been "Opened Up" helps account for all the requests for "The Mods" here on Internet.
"QSK"....Used primarily on phone, believe it or not, as a way to break into a QSO already in progress.
"QSL"....means "received".

"QSL?"....an inquiry meaning "did you receive?"
"QSL!"....received, with agreement!
"Radio Check"...not,as you might guess, a means of paying for a new 2 meter ham, but rather a request for a report of
received signal quality. You need to do this
quite often, just to be sure!
"Receive(as in "this rig has good receive")...Receiver sensitivity
"Said That"... from, or DE. As in " K0MB said that."
"SandBagging"....Listening. Used to be known, for you oldtimers, "copying the mail."
"Station"... See "QSK."
"SWRS(pronounced "sweres")...the pointless pluralization of SWR, Standing Wave Ratio. These are not good to have!
"Upperside"...USB
"Walk On You".....transmitting simultaneously with another station with sufficient signal strength to disrupt communication.
Past Tense"Walked On You."
"We're Trying"....means "over" when used at the end of a call, as in "K0MB, we're trying." If you're by yourself, say "We
Trying."
"5 Words"(as in "I'm working on my 5 words")...Formerly the required minimum speed required to enter
the Ham bands at lowest level
of proficiency. Now related to the much
sought-after"upgrade."
70/3(pronounced "seventy-thirds").....while most new hamisms relate to pointless pluralisms(see"Beams"), this one is a pointless fractionalism of "73".

There are more. no doubt. I hope others will add their own research into this ever-expanding realm of Ham Linguistics, and post their research here.

"The 439.25 frequency you mentioned is a ham ATV frequency. There is no way your hero could transmit to the whole world on that frequency. If he <could> transmit to the world on that frequency, few people, if any, would see it. Downconverters are extremely rare among the general population, and you need a downconverter to see the video."

Most TV sets and VCRs sold in North America these days will tune in 439.25 directly, with the tuner switched to "cable" mode and tuned to channel 60. The same may be true in other countries (apart from Japan) that use NTSC, but elsewhere the TV tuners may not be able to go down there.

Jeffrey Herman wrote:

"In regards to just England using LW for broadcasting, we in the US weren't busy building an empire; our broadcast needs were on a local, not global, scale."

The BBC didn't have much luck when they tried to broadcast to North America on LW in the 1930s, the lack of receivers notwithstanding. I've heard European LW stations on LW in Louisville, Kentucky, but only with a rather large antenna (a dipole trapped for the SWBC bands) and the reception was not that hot.

The real attraction of LW was that a national radio service could cover a large area with one transmitter even in the daytime; the BBC covers almost all of the UK with one 500 kW rig and two 50 kWs on 198 kHz, for example. So LW is much better suited to an operation like that than to the localized service we have in the U.S. (though this in itself doesn't explain why the CBC passed up this opportunity).

That is not true. You have 2 minutes to make corrections at the end of the receiving test, so it is possible to correct errors in copy, on Canadian code tests. At least my class did!

While I'm here, (I don't believe I'm answering your post) Masataka san.....would you consider holding back your 2 cents worth on every bloody thing that gets posted to these radio newsgroups? Maybe save up your random thoughts for a while, form them into complete sentences, and post them all together once a day. I am sure I am not the only one getting tired of all your teeny little blurbs.

I think the term you're looking for is ARPANET. It is (was) an advanced computer network set up by ARPA (Defense Advanced Research Products Agency) to link universities, think tanks, and military research installations. The theory was if many switching stations were knocked out by a nuclear attack, there will still be some switching stations left over to handle message traffic, hence the many nodes on ARPANET/Internet. I got this from the glossary in _Top Secret - Espionage Role Playing Game_ - TSR Hobbies - Second Edition, February 1981.

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going.If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT
and Phase 3D see: http://www.amsat.org

"How many still use Win 3.1? I know that on some very old machines there is little choice, but our sense is that use of the old 16-bit Windows is pretty limited. Anyone have a gut feel for Win3.1 usage among their friends, *especially in packet operation*?"

Dunno, but I'd suspect that older PCs are *more* common, if anything, in packet use than in general home use, simply because some folks might have a 286 or 386 in the shack and a Pentium elsewhere for non-ham stuff. (Have you considered doing this 32-bit app in such a way that it could run with Win32s?)

FWIW, Microsoft still sells Windows For Workgroups 3.11 -- the last release of Windows 3.x, which requires a 386 with 4 Mb -- and only in the past month or so did they drop Windows 3.1 from the line. Some PC makers also offer systems to corporate buyers with their choice of DOS 6.22/WFWG 3.11

Message-ID: <64kbv9$8vi$2@news00.btx.dtag.de>
Source record: 186586

```
The VX-1R Software and Hardware mods ( Version 1.00, Date: 14.11.97 )
======================================================================

Some time ago some mods for the VX-1R from YAESU were released on the
Net (Solder Jumpers 0 and 1).

In the US they are working (because by accident you switch to the
FreeBand Country Code 000 (US is 011), ARS is disabled) but in Germany
(Country Code 101) with soldering Jumper 0 (1 already soldered) you
Switch to Country Code 100 and get something totally different :)

You don't understand ?, keep reading :)

In the following Text the meaning of the 6 Jumpers is explained and
I present the Software mods for the VX1R. This is very simple, fast
and easy done, you just have to change 1 (one) byte in your .TPL file,
you don't even have to open the VX1R but you need the VX-1R Programmer
from the ADMS 1D Software Package.

After I have released the Software mods for the FT50R, there was a lot
of confusion, there were to many terms like Key_Byte, Band-Set_Byte,
Sub_Band-Set_Byte, ... to many addresses , ....

This time I will not go into details, and will try to keep it as simple
as possible, ONE Address and a Band_Set-Byte only.

The Band-Set_Byte is identical to the 6 Jumpers on the VX-1R:☐

Jumper 0 = Country CODE 1st bit ---------------------+
Jumper 1 = Country CODE 2nd bit -------------------+ I
Jumper 2 = Country CODE 3rd bit -----------------+ I I
Jumper 3 = WIDE TX ----------------------------+ I I I
Jumper 4 = CELLULAR -------------------------+ I I I I
Jumper 5 = WIDE RX ----------------------+ I I I I I
I I I I I I
Band-Set_Byte (8 bits) = 1 1 X X X X X X
I I

WIDE TX ( enable 1, disable 0 )
-------------------------------------------------------------------
Enable/disable WIDE TX from 140-170 and 420-470 (MARS/CAP)

CELLULAR ( enable 1, disable 0 )
-------------------------------------------------------------------
Enable/disable the range 824-849 and 864-894

WIDE RX ( enable 1, disable 0 = see below)
-------------------------------------------------------------------
BC Band - Enabled
FM - Enabled
AIR - Enabled
V-HAM - RX Enabled only in TX range according the country code.
VHF-TV - Enabled
ACT 1 - Disabled
U-HAM - RX Enabled only in TX range according the country code.
UHF-TV - Enabled
ACT 2 - Disabled

You can make the mods by Hardware (solder the Jumpers) and call the
INIT routine (hold down AR and M/V at powering on, and press FW)
or by Software, you need the VX-1R Programmer and you have to change
only 1 byte (a 10 seconds job) in the .TPL file, no Init is required.

The results with the Hardware and/or Software mods are 100% identical
and 100% reversible. The only difference is that with the Software
mod you will switch back to your Hardware Configuration by calling the
INIT routine.
```

According to some messages in the past days, YAESU is removing the diodes from the VX-1R to disable the Hardware mods, so the Hardware mods may not work in the future Versions of the VX-1R, then the Software mods will be the only Solution.

If you are using Hardware mods, note: 1=JumperOpen, 0=JumperClosed

If you are using the Software mods, it is not importuned what Hardware configuration you have (read: mods you have done), you can simply switch to ANY configuration.

Example:
7 6 5 4 3 2 1 0 (Jumpers/Bits)
Bits 7 and 6 are reserved 1 1
Enable Wide RX 1
Enable Cellular 1
Enable Wide TX 1
German 1
Country 0
Code 1

Band-Set-Byte 1 1 1 1 1 1 0 1 = FD (HEX Number)

Well, make now a .TPL file and change with a HEX editor the Byte on address 114C to be FD, upload this .TPL to the VX1R, done.

So, I thing the mods are understandable now, with this method you can configure the VX1R exactly according your needs.

The most used mod will probably be to enable WIDE TX, so the Auto Repeater Shift is still working, the TX outside the WIDE TX (with the FreeBand Country Code 000) is anyway only in miliwatts in VHF (not useful) and a little bit better in the UHF range 340-420.

A wise solution may be, not to make any Hardware mods. You make the Software mod (Enable WIDE TX or FreeBand) and in a emergency you can switch to the unmodified (factory) configuration by the INIT routine in just 1 second (hold down AR and M/V at powering on, and press FW) You know, just in case ...

That's all folks, for now :) , there are some other interesting things, but I want to experiment a little more before I release them.

If you have any Questions, Email me.

73's to all.

PS. - Thanks to Mark Russo for his great Help, ...

- Greetings to all my Friends in Skopje, Mazedonia.
- CQ CQ CQ Z3HAN, still ill ?, you should eat Cheese from Berovo :)

: Says who? If your statement is accurate, then why are hams the ONLY ones
: to use Morse? The military doesn't use it. The government doesn't use
: it. Commercial radio doesn't use it. Very few hams use it. NO ONE uses
: it, except a few old geezers with an attitude.

I usually keep outof stupid flamefests like this, ... But:

I get pissed, when people base their arguments on assumptions that are
completely wrong, rather than facts.

Fact is:

If you turn your dial up and down the shortwave bands, you will, at all
times, be able to pick up a few hundereds of commercial (non-ham) stations
that make heavy use of morse code.

Worldwide *ALL* of the organisations you menthioned above *DO* use
morse code.

Just to get this straight.

Regards,
Friedhelm

Greg Dean (n9nwo@gte.net) wrote:

: I am becoming convinced that Perot works for the democrats. He always
: steps in to swing the election their way. He seems to pull the Reagan
: democrats out of the election.

My late grandmother thought that too. I don't know myself, but I though
his pulling out of the 1992 election and coming back in again was a
little fishy. However, if Perot wasn't in the picture, I would say Bush
would have won.

: However, if he should be able to win a law suit that would open the
: process to third parties, he would be doing us all a favor. And third
: parties would distroy the Democratic Party as it is a mix of groups that
: have little in common. The Greens would be the first to leave.

Could be. The Democrats appeal (or try to) to various interest groups
although they don't succeed at making everybody happy. Still the
Republicans are like that in a way because there are varying factions
amongst them too. Heck, I'm more of a Teddy Roosevelt/Pat Buchanan
Republican and I always get into it with the free-trade side of the Party.
I think the boat needs rocked after 100 year or so of the current
Demo/Repub battle we have now.

: Remember, the Germans have 26 parties and most Germans say that even
: with so many parties, nothing changes!!

Yeah, they could be a problem where you don't have a 50% + 1 vote in any
election. I mean Dole got like 37% of the vote, Clinton 47%, and Perot
the rest. I may be a little off, but still, like in '92, their wasn't a
majority. Perhaps the trick is to have the top two or three run off in a
special election.

: Get your newpaper fired up about HR 2369 and HR 1964. It is their
: scanners too that will banned.

Sorry for being off topic but my view is politics enter everything and
affects everything. Politics took the cellular frequencies away from all
new scanners.
Chuck, who will call/write my Congresscritters.....

>
>
>
> GOOD! WE'RE HAPPY ABOUT THAT!

EXCUSE ME.......... But not in trying to make a Political battle out of this particular issue, I AM a DEMOCRAT and a POLITICIAN. ALSO, I DO happen to be an avid Scanner listener, Ham Operator, and use other types of radios when need be, as I'm involved in Fire/Rescue and etc.

I've been a scanner listener since scanners came out, into Fire/Rescue and Ham, since I was old enough to be.

I don't care what party anyone is from, that isn't the issue here. I DO NOT appreciate EITHER the fact of anyone trying to take away an AMERICAN FREEDOM. DO NOT condemn ALL democrats just for the doings of a few.

Instead of making a political agenda out of this, write to your local Senators and Congressmen/women and tell them how you feel.

It's the few jerks that make all of us look bad, no matter what arena you're in. Be it scanners, ham, cb, politics, etc.

DIVISIONAL NEWS

NEW MEMBERS

A warm welcome is extended to the following new members approved at
the Council Meeting on 14 November 1997. We hope you have a long and
happy association with the Institute.

Full Members:

VK2ICV Nicholas HACKO of Parramatta
VK2IKY Don REED of Loftus
VK2CAT Gergory RYAN of Repton
VK2KWA William ALFRED of Hargraves
VK2XCI Normal McMILLAN of Mount Hope
VK2JBH John HERDEN of Kempsey
VK2DAO Douglas CRAIGIE of Sth Maroubra
VK2ILC Ricky RANDALL of Bligh Park
VK4KGP Douglas HOLDER of Tin Can Bay

Associate Members:

Christopher MANN of Glenorie
Ali GHAZANFAR of Darlington
Stuart WALKER of Becroft

Applications for membership approved since the end of January 1997
now stand at 122.
(All these new members go into the next monthly draw for a Fluke 12B

Digital Multimeter. Good luck!)

1998 CALL BOOK OUT NOW

The 1998 Australian Radiocommunications Reference Guide and Callbook is now in stock. The price is $15 for non-members, $13 to members. If you would like it posted to you, please add $2.50 for postage & handling.

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta on Sunday 7th December 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm. Please apply to the office for the necessary forms. Applications close on Thursday 27th November. Acceptance cannot be guaranteed for any applications received after that date.

-- submitted by Eric Fossey VK2EFY - Divisional Secretary

WICEN NEWS

This is a reminder about listeners who have read the editorial in the November issue of "Amateur Radio" magazine, exhorting a particular standard for the ubiquitous "T-connector". Unfortunately, it is sad but true that there is NO national standard for this connector, and the editorial merely reflects what Victoria happened to adopt. In New South Wales, WICEN followed the practice of our own emergency organisations, where the top of the "T" is POSITIVE and the bottom is negative. The mnemonic for this is that the vertical pin resembles an earth pin i.e. negative ground. Although everyone is free to use his or her own standard, please be aware that it is wise to follow whatever is in common use in your area of operations; the best thing to do would be to ask around, and carry a multimeter, along with a polarity-changer, on activations and exercises.

This is a reminder that the "Ironman Australia" Forster-Tuncurry half triathlon will be held next Sunday. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed, via telephone on (02) 6555-3177, or packet radio as VK2KXQ at VK2EO. The briefing for this event will be held at 1800 hours on Saturday 22nd around the Hunter WICEN van, which will be adjacent to the surf club at Forster Beach. The frequencies of 146.525 MHz FM and UHF CB channel 20 will be used as liaison frequencies on Saturday.

Of interest to our listeners on the Canberra border is that WICEN ACT are looking for Amateurs to assist with this year's FAI Rally of Canberra. This event runs from lunchtime Friday November 28th until the afternoon of Sunday November 30th. Those interested in assisting are asked to contact either Simon Trotter VK1AUS, SCO WICEN ACT, on 0419-439-925, packet as VK1AUS at VK1BBS, Internet as vk1aus@dynamite.com.au; or Phil Longworth VK2ZPL, DSCO WICEN ACT on (02) 6216-4889 during business hours, or packet as VK1ZPL at VK1BBS, or Internet as Phil.Longworth@ato.gov.au.

If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone,

015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

LITTLE LEOS NOT FARING WELL AT WRC-97

WRC-97 is nearing its halfway point with some issues moving toward settlement and others still very contentious. Here's a look at the issues important to Amateur Radio:

Little LEO (non-voice, non-geostationary mobile satellite) interests have had a difficult time at WRC-97. While nothing is firm, the conference appears to be moving toward agreement that the segments 146 to 148, 170 to 230, and 406.1 to 430 MHz are not open for consideration for Little LEO allocations at this time. There has been little support outside Region 2 for any new Little LEO allocations. Most of the Little LEOs' interest has

focused on 401 to 406 and 450 to 470 MHz, with some possibility of future studies of possible compatibility with broadcasting at 470 to 862 MHz.

Thursday night, a compromise proposal from The Netherlands for a secondary allocation at 432 to 438 MHz for the Earth Exploration Satellite Service failed to gain sufficient support for adoption. Instead, it appears

that a resolution will be proposed calling on the ITU-R to conduct urgent studies of the best band for such a satellite to operate in. For the satellite
to perform its intended function of studying the rain forest, the frequency

chosen must be in the general vicinity of 400 to 500 MHz. This makes the selection of an operating frequency that will not interfere with other services very difficult, because this spectrum is heavily used by a variety of services all over the world.

Earlier, it was agreed that the Earth Exploration Satellite Service would be upgraded at 1215 to 1300 MHz from a secondary to a primary allocation. At this order of frequency, the service has less potential for interference to the Amateur Service, and its presence reduces the possibility that other, less-compatible services might later be introduced into this band.

Wind profiler radar issues appear to be close to resolution, with amateur satellite segments protected from being mentioned as appropriate for wind profiler operations. What has been agreed at working group level is that--except for a worldwide primary allocation at 1270 to 1295 MHz--the

only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis. For Region 2 amateurs the significant points are that administrations are urged to implement wind profilers in radiolocation bands at 440 to 450 MHz, 904 to 928 in Region 2 only (protecting the lower, weak-signal segment), 1270 to 1295 MHz (protecting amateur satellite and weak-signal), and 1300 to 1375 MHz. The bands 420 to 435 MHz or 438 to 440 MHz "could be considered for use . . .in case compatibility between wind profiler radars and other radio

applications operating in the band 440-450 MHz or 470-494 MHz (only in some Region 1 countries) cannot be achieved." The amateur-satellite segment is protected.

Another amateur delegate on a national delegation has arrived. Oyekunle B. Ajayi, 5N0OBA, of the Nigerian Amateur Radio Society is on the Nigerian delegation and is taking an active part in the conference. The IARU reception was held Thursday night and was quite successful, attracting among, others ITU Secretary-General Tarjanne.

4U1ITU has been active using the special call sign 4U1WRC. Even 10 meters has been open to the US. Unfortunately, with meetings lasting well into the night, the many delegates who hold amateur licenses have little time to operate.

--The ARRL Letter, Vol. 16, No. 44, dated 7th November, 1997

MAGAZINE ROUNDUP

Here again is another summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the November issues of the various magazines.

"Electronics Australia" looks at WebTV (who will try it on ATV?); Australian astronomy is analysed; a video enhancer is assembled; a "STAMP" microprocessor drives Christmas tree lights; your shack can be automated with a mains-wiring communications link; and batteries and chargers are introduced.

"Silicon Chip" explains electric lighting; a 10-amp speed controller is constructed; a simple cable tester is trialled; shutterbugs can build a darkroom lamp regulator; a simple musical doorbell is made; and servo motors are simplified.

"Amateur Radio" gets T-connectors the wrong way around; a power meter and attenuator are home-brewed; some cheap baluns are built; a cassette motor controller is constructed; and 29MHz gateways are discussed. Listeners with Web access can access the contents of "AR" from the "unofficial" Federal page; the full path, courtesy of the VK2 Division, is: "http://marconi.mpce.mq.edu.au/wia/federal/armag.html"; we don't know about other magazines.

"Radio and Communications" investigates Internet telephones (will this replace Amateur radio?); how easy it is to get into packet radio is

described; a speaker-mic is built; and a differential is turned into an Armstrong rotator.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

DX REPORT

CROATIA - The Croatian Radio Club station is celebrating its 20th anniversary until December 31, using the special callsign 9A20D. Activity takes place on 80 to 10 meters using CW and SSB.

UNITED ARAB EMIRATES - David, K3LP, and Rich, KE3Q, will be active in Dubai beginning November 22 from the QTH of A61AJ. They will also participate in the CQ WW CW Contest.

IRAN - Ali has been active as EP2MKO on 10 meters around 0745z.

MAYOTTE - DJ1RL and DK8FB will be active as FH/homecalls until November 28.

SOUTH KOREA - DS5USH and DS5RNM has been active on 80 meters around 1200z.

DJIBOUTI - Dominique, J28DB, will be active for three years.

SOUTH SHETLAND ISLANDS - Danny has been active as LZ0L on 40 and 20 meters.

GREENLAND - Kim, OX3FV, is active using CW on 160 meters and the newer bands. Meanwhile, Joergen, OZ8AE, is active as OX/OZ8AE until December 1. Look for OX3FV in the CQ WW CW Contest.

BANGLADESH - S21YG has been heard on 15 meters around 0900z and 40 meters around 2000z.

BOSNIA - Cedric, F1PSR, is active as T98PSR from Sarajevo until the beginning of March, 1998. Look for SSB activity on 160 to 2 meters. Some satellite and packet activity is expected.

CAMEROON- Phillipe is active as TJ1HP.

ANTARCTICA - VU2JBK is active from the Indian Maitri Station in Queen Maud Land.

ALBANIA - ZA1MH was active on 15 meters around 1400z.

SPUTNIK 40 - WHEN TO HEAR IT

The Keplerian elements for "Sputnik 40" (the replica) have been entered into the Divisional satellite tracking program, and we've come up with the following times when in might be worth listening for those little beeps in the Sydney area. Elsewhere in the state, you should listen a few minutes either side of the times given here.

The Sputnik 40 beacon is transmitting on 145.82 MHz (plus or minus Doppler shift) - for those of you not familiar with satellite operation, this
means that the satellite will appear to be transmitting on a higher frequency when it first appears, and appears to drop in frequency, rather like a passing fire engine. The beacon frequency will appear to vary from about 145.825 MHz down to 145.815 MHz.

Suggested local listening times to listen this week are:

This evening 8:30pm
17 Nov 1pm 7:30pm
18 Nov 12:05pm 8:00pm
19 Nov 12:40pm 7:10pm
20 Nov 11:40am 7:45pm
21 Nov 10:40am 6:45pm

CLUB NEWS

MANLY-WARRINGAH RADIO SOCIETY

This Wednesday is lecture night at the Manly-Warringah Radio Society. This month's lecture is entitled, "AN EVENING WITH A POWER AND JOB GENERATION ENGINEER". The guest speaker for this event is DAVID EASSON, former Head of the Department of Industrial Development.

David Easson began his career as an electrical engineer with the Electricity Commission and then entered industry and ultimately concluded his career as Head of the Department of Industrial Development during the Neville Wran, Unsworth and Greiner administrations. David will share with us his experiences with particular reference to job generation. This will be a lively evening with an opportunity to glimpse at how things look from the top and how opportunities can be seized and acted upon.

This will be the last lecture night of the year. Next year's first lecture will

be on Wednesday, January 21st, when Paul Couvret, former President of Warringah shire, will speak about his life as a prisoner of war in Japan. In
particular, Paul will tell of what happened to him in Nagasaki on that fateful day in August 1945 when the second (plutonium) atomic bomb was detonated over that city.

The club's annual Christmas dinner will take place on Friday 28th November at the Pittwater RSL, Mona Vale. Please get in touch with Sean Gannon VK2THT if you would like to join the festivities.

The Manly-Warringah Radio society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with business meetings on the second Wednesday and lectures on the third Wednesday of the month. Doors open at 7:30pm for an 8pm start, and visitors are always welcome. If you need directions to get to the club, just call in on the club's two metre repeater (146.875 MHz) or phone the club any Wednesday evening - the society's number is listed in the White Pages.

-- Bob Hawkesley VK2GRY & Richard Murnane VK2SKY

HORNSBY & DISTRICT ARC. INC.

The next formal meeting will be on Tuesday 25th November, in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) at 8:00 pm. There is business that shall

be discussed and dealt with, then the guest speaker for the evening, steps into the spot light, this month the speaker is Jo VK2KAA. If you would like to hear what Jo has to say come along, Visitors are always welcome.

Don't forget the Club Net every Monday night under the, Club call sign VK2MA. through the Club repeaters VK2RNS. and VK2RAT. The frequencies are, 147.250 with a positive offset and 439.975 with a 5Mhz negative offset. Listeners tune your receivers to 147.250, or 439.975. Yes! we would like you to join the net, or come along to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490 again 9807 2490.

-- John W. Turner VK2WRT Publicity Officer

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE HELD ON TUESDAY, 18 NOVEMBER AT AMATEUR RADIO HOUSE, PARRAMATTA.
EVERY SUNDAY THE GROUP HOLDS AN INFORMAL NET ON TWO METRES FM AT 11 AM. THE PURPOSE OF THE NET IS TO ALLOW FM-ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES ELSEWHERE ON THE BAND.

TO MAKE THE EXERCISE EASIER FOR ALL CONCERNED, THE NET IS ON THE BLUE MOUNTAINS REPEATER ON 147.05 MHZ, STARTING AT 11 AM. ANYBODY IS WELCOME TO CALL IN AND JOIN THE DISCUSSION. FIND OUT WHAT GOES ON BELOW 144.600 MHZ.

YAESU VX-1

I have a small problem with my new VX-1, the Automativc Repaeter Shift
(ARS) function does not work on the UHF-HAM band in Denmark, because the
repeater freq. are different from US and EURO version 1 and 2.
434.600 - 434.975, spacing -1.600 MHz.

How can I change the freq. range ARS is working ?

Put a 12 volt light bulb in series with the power supply to limit the
charging current. When the light bulb goes out or gets real dim you
know
it's close to full charge.

You might try a noise canceller like the ANC-4, but to really solve the
problem you need to get on your power company and have them fix
the problem at the source. The noise is usually caused by arcing over
loose pole hardware or across cracked insulators. The power company
is interested in getting these problems fixed because they can lead to
failure of the transmission line, and that costs the power company
big bucks in lost revenue.

(I was shocked to find out just how much lost revenue is involved in
only an hour's downtime to a distribution line. It's now obvious to me
why the power company is so eager to prevent this sort of loss.)

If the line is an EHT line, IE big metal towers, then the noise may be
due to corona noise. The power company may not be able to totally
solve that, so you might give the ANC-4 a go at that point. But give
the power company a chance first. They can usually totally eliminate
line noise. It may take them a while, but they are interested in fixing
this sort of problem.

The battery is probably shot. A regular lead-acid battery is usually a goner if the voltage falls below 10 to 11 volts. I would expect the same of the gel-cell.

It's worth a try running it on the charger for a while, but don't be surprised if it doesn't revive.

I wouldn't put diodes in the lines. The voltage drop may prevent you from bringing the battery up to proper voltage even if it is still good. A low-value resistor or 12-V light bulb will moderate the current, and you can make rough current measurements by measuring the voltage drop across it (Ohm's Law: I = E/R). The resistance of the light bulb will go up if the current is very high (bright bulb), so the measurements won't be accurate, but they're cheap and easy, and they give you a rough value.

Hey - and what about Independence Day? Sure it was just a movie but,
hey, they were communicating. Will it ever happen that way - doubt
it. Will there ever come another time when a CW contact saves the day
for even *one* individual - probably. That mean we need to keep up
the requirement for CW.....I don't think so. I think there are enough
people out there who find the challenge of learning and then
communicating with CW invigorating. So, if you *really* examine your
motives maybe you'll find you fear the loss of that mode due to lack
of interest.

Just a thought.

Hi Chris.

Interesting question. As a Volunteer Examiner, I'd have to say this is not something I've paid a great deal of attention to. Probably everything from Alinco to Zenith, past to present has been used on the Morse tests. Go through and put every name you can think of and find and practice them all. Usually, what I've seen after 5 years of helping with exams is that little content will be recognizable from a brand name aspect. There are many common words on the exams and also many number groups along with all the prosigns and puncuation.

A recipe for failure in the code exams is anticipating what *might* be on the exam except all 26 letters, the common puncuation (, . / and ?), and amateur radio prosigns (AR, SK, KN, and BT). The only thing to bank on is your ability to copy the code. It's that simple. There is no edge or formula that will get you a passing score other than knowing the code. The only talent I've seen people be able to use when copy is marginal is answering the questions by being able to make out words from only 50% or so of the letters. A "Wheel of Fortune" type skill. This is a good skill to develop as it will also help you make sense of real on-the-air QSOs when copy is poor.

The best practice, IMHO, is to get on the air and make some Qs. You'll have fun, make some friends, get some QSLs, and reach that 13 to 15 WPM faster than just listening to tapes, the computer, or W1AW. Also, the jitters you encounter when making real QSOs will prepare you well for the exam session.

GL with your exam!

2916. FT-50 problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-15 00:00:00 UTC
From: mrusso@hoflink.com
Message-ID: <346e0d06.3234148@news.hoflink.com>
Source record: 186605
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment

Hi to all, While playing around with my FT-50 last night. I hit a sequence of buttons (I don't remember now). The display went to a blinking - - - - - . I was able to get the frequencies back but they stay blinking. It seems I turned off the VHF receive, no audio at all, even when the "mon" button is pushed but the little speaker on the LCD display gets displayed. This seems to affect all frequencies from 76-299.99 MHz. It does transmit OK there (ham band) but no receive. The UHF side is OK.
From 300- 999MHZ worked as before. I did a CPU reset to no avail. I reloaded the software also but to no avail. The same thing happens in the VFO's also.
Has this ever happened to anyone out there?? Anybody know how to correct this problem? Please e-mail me direct.
Thanks for your help.

Mark

P.S. Hey Bob, stop laughing!

Mr. Roger and I DO have codes, but we don't understand why the morse must be a requirement for HF voice operation. We rather suggest to have more practical exams instead of morse.

> they want everything given to them !

I prove my morse code skills and then complain against it (because the morse code requirement does NOT make senses logically).

I don't complain something just because I don't want to do anything.

I'm looking at taking the 13wpm code test, but have little experience
with brands of rigs used on the tests. I know that sounds silly,
butI'm a newbie. Could someone suggest a list of brand names used on
the tests? I want to listen to them in code so I can recognize them.
Tnx,
Chris

2924. *** HF Mobile Antenna + Tuner ***

I would like to have a feedback on:

- Outbacker Perthplus
- Outbacker Perth Junior
- Outbacker OB8 Classic
- Outbacker [other products] (for 80m - 10m or 6m)
- MFJ 9xx Antenna Tuners (for 80m - 10m or 6m)
- MFJ 624D Phone Patch
- MFJ xxx Mobile Antennas (for 80m-10m or 6m)

- other mobile HF antennas (for 80m - 10m or 6m)

I am also looking for 2m SSB amplifier.

Thanks in advance.

the bad thing about US CW test is that receiving is only the part of
the test; you know what to expect (name of rig, QTH etc.) in the
test.

In Canada, the candidates have no clue to what they get in the test
and sending is also the part of the test. You need to write down
every single letter you hear...

Says who? If your statement is accurate, then why are hams the ONLY ones to use Morse? The military doesn't use it. The government doesn't use it. Commercial radio doesn't use it. Very few hams use it. NO ONE uses it, except a few old geezers with an attitude. That should tell you something. I find it humorous that the "know code" faction preaches about how great Code is, yet can't explain why this so obviously great and wonderous communications mode is rejected almost unanimously.

> Please remember that ham radio is not commercial and I for one believe that
> if you can't perfom the basics, how can you ever expect to perform the more
> complex?????

I suggest you put your money where your mouth is and promise not to drive a car until you have learned how to ride a horse. You will also refrain from reading, speaking, or writing English or any other modern language until you have learned how to interpret cave paintings...and so on.

I would buy your "basics" argument except that Code is the "basic" of NOTHING. Once you learn it, then what? Other than increasing your copy speed, where will you go with it? Conversely, Ohm's Law and algebra, for example, are used in higher forms of science and are legitimate building blocks to learning. Code has no application beyond itself.

Furthermore, I wonder how many among the "code snobs" are using memory keyers and computer programs to do the dirty work for them, or use straight keys exclusively. I'll bet a majority of those clowns don't even OWN a straight key.

For the record, I got my ticket the "hard way"; if you're going to rip me, find another angle.

Charlie

>Thanks
>Tom
Hi Tom, you could try one of several noise cancelling devices on the
market. They work by taking a sample of the interfering noise (picked
up by a small sense antenna) reverse the phase of the sample and then
add it back to the original signal thus cancelling the noise and leaving
the wanted signal intact.
They do work well but may require some experimentation with the sense
aerial to achieve the right level of signal.
A commercial version available in the USA is made by MFJ and is the
MFJ-1026. In the UK it retails at 140 UKP but is bound to be much
cheaper in the USA.
good luck, Trev G3ZYY ...-.-

I am becoming convinced that Perot works for the democrats. He always steps in to swing the election their way. He seems to pull the Reagan democrats out of the election.

However, if he should be able to win a law suit that would open the process to third parties, he would be doing us all a favor. And third parties would distroy the Democratic Party as it is a mix of groups that have little in common. The Greens would be the first to leave.

Remember, the Germans have 26 parties and most Germans say that even with so many parties, nothing changes!!

Get your newpaper fired up about HR 2369 and HR 1964. It is their scanners too that will banned.

WRC-97 HEADS INTO ITS FINAL WEEK

The third week of the four-week 1997 World Radiocommunication Conference in Geneva drew to a close with no unpleasant surprises for Amateur Radio. The Allocations Committee, Committee 5, has not yet completed its work on matters relating to "Little LEOs" as advocates of the service continue to look for support, but the focus of discussion is not on the amateur bands.

Next week, the committees must finish their work early so that their recommendations can be taken up in plenary meetings. Conference decisions are firm only after second reading in plenary. Delegates will be spending long hours examining long documents in great detail to make sure nothing slips by unnoticed.

4U1WRC has been more active this past week. Amateurs interested in WRC-97 may wish to visit the Web site maintained by the International Amateur Radio Club at http://www.itu/int/radioclub/. From there, links will take you to more information on 4U1WRC, 4U1ITU, and WRC-97.

HAMS PITCH IN DURING EARLY-SEASON SNOW EMERGENCY

Late October brought unseasonably early and extremely heavy snowfall to the Rocky Mountain states and the Great Plains. Hams volunteered to help, providing emergency communications and other logistical support as residents in some cases found themselves without power, telephone service, or transportation.

Mike Proctor, KB0IAP, of Colorado Springs, Colorado, reports that the Pikes Peak District 14 ARES (PPARES) actually began its activities by tracking the storm before it arrived, then ramped up its activities accordingly as the weather situation went from bad to worse. After the National Weather Service issued the blizzard warning, PPARES used its severe weather page over the 146.97 repeater for the first time.

PPARES was called in to support the Colorado Springs Police Operations Center to help with staffing and transportation. As the storm became too much even for many 4x4 vehicles, the US Army sent in Humvees, and some hams were assigned to these for communications. Humvees were used to rescue stranded travelers and for emergency transport. By the third day of the storm, El Paso RACES requested PPARES to staff El Paso County Search and Rescue as RACES had exhausted its resources. At one point in the middle of the weather emergency, telephone circuits became overloaded. "We were very fortunate that power failures did not occur," Proctor said.

In all, Proctor reports 85 hams took part, including PPARES, District 24 ARES and El Paso County RACES. "PPARES and its members performed admirably, exceeding mission requirements and receiving strong praise from our served agencies," he said in a lengthy report. Even snowbound hams helped with net control, dispatch, map lookups, mission coordination and telephone calls.

In Nebraska, many residents found themselves without power for up to a week as heavy, wet snow downed trees and power lines in the Cornhusker State. Hams volunteered to help transport stranded emergency workers in the city of Lincoln, Joe Eisenberg, WA0WRI, told Newsline. Hams also helped transport Red Cross workers and equipment to and from shelters.

Midlands ARES Assistant EC Mary Joseph, N0TRK, of Omaha, says ARES pitched to help coordinate the cleanup effort in the week or so following the storm. She reports that ARES worked with the Nebraska National Guard to support communications. Joseph says she and her husband Pat, N0HPP, set up a station in the Guard command center, "right next to their communications people."

At one point, mobile ATV units were able to send back video of the troops in action and scenes of just how bad the situation was--a capability that Joseph says impressed the Guard commanders. Once the Guard commanders and ARES folks felt more comfortable with each other, the military came to call more often on the hams' capability. "Soon, it became obvious that ARES-relayed traffic was more reliable from all areas and faster than

cellular phones," Joseph says. "Amateur Radio was mentioned as a positive by one commander, and everyone agreed that ARES made their job easier, getting the message through fast and accurately."

Hams also were assigned to work with Guard troops in vehicles to keep lines of communication open. Overall, 30 ARES members from Midlands ARES, Sarpy County ARES and Cass County ARES logged nearly 560 hours of volunteer service to support the cleanup mission of the Nebraska Army National Guard between November 1 and November 7. "During that time, Midlands ARES was always able to get the message through," Joseph says. This was critical in those situations where the Guard's radios or cellular telephone service were unable to perform.

RADIO COACHES PROGRAM TO RAISE ELMERING TO NEW LEVEL

Over the years in the pages of QST, countless letters and articles have been written about Elmers, those patient, inspired souls who thoroughly enjoy bringing newcomers into the world of Amateur Radio. Now, the ARRL's new Radio Coaches program takes Elmering to new levels. Through the Radio Coaches program, you and your fellow club members can become part of a national effort to better the lives of youth using Amateur Radio. And we'll provide the game plan!

Radio Coaches stems from the kickoff of America's Promise, the Alliance for Youth, a national campaign to improve the lives of the nation's young people and put them on paths for brighter, more productive futures. As a result, the ARRL Board of Directors authorized the creation of the "Radio Coaches" program as Amateur Radio's commitment to youth.

The mission will be to give young people an ongoing relationship with a caring adult and a marketable skill through effective education. Amateur Radio will be our chief tool. How does it work? From day one, we supply information to help your Affiliated or Special Service Club form a "coaching team." Your team will build a relationship with a local school, community organization or other institution from which you will recruit your "athletes." You will coach young people in your community on the basic elements of electronics and the magic of radio communication through exposure to Amateur Radio. In addition, you may arrange field trips to technology museums, radio conventions and hamfests. Or you may choose to introduce students to local businesses that use radio and electronics technology. Your job as a coach will be to make every member of your team more aware of how these experiences can lead to career opportunities in telecommunications.

The ARRL will support this effort by providing clubs with fliers to help recruit youngsters, curriculum materials and other informational resources. While supplies last, the ARRL will provide 1997 ARRL Handbooks to participating clubs who want to use them with students and later donate them to school libraries or youth groups. The League also will provide youth packages with handouts to accompany the curriculum materials. Basically, we'll supply the strategy, and you'll supply the energy and imagination.

Through Radio Coaches, we want to reinforce the idea that Amateur Radio is a "sport for the brain." Ham radio provides not only a lifetime of enjoyment, but also, potentially, a lifetime career.

For more information on how you can get involved in the Radio Coaches program, contact Radio Coaches, c/o Field Services Department, ARRL, 225 Main St, Newington CT, 06111; or e-mail coaches@arrl.org.--Jennifer Gagne, N1TDY

HAMVENTION INKS HARA DEAL THROUGH 2003

The Dayton Hamvention will be staying put for at least a few more years, and definitely through the year 2000, when it will be the site of the ARRL National Convention. Hamvention and Hara Arena officials this week announced a five-year contract to keep the Hamvention in Dayton. That's the longest contract in their business relationship. According to a report by Angela Townsend in the Dayton Daily News, there had been talk that the Hamvention might leave Dayton for Columbus, Indianapolis, or even Atlanta after its current contract expired in one year.

Hara Arena President Johnny Walker estimated that the Hamvention brings in $7 million in revenue each year to the Dayton area. Approximately 28,000 attended the 1997 Hamvention. The 1998 Dayton Hamvention will be held May 15-17. Advance tickets are on sale now for $15. Write Hara Arena Conference Center, 1001 Shiloh Springs Rd, Trotwood, OH 45415.--thanks to Bev Priest, N8VZV

AT&T FUNDS KENTUCKY HAM RADIO REPEATERS

There was a silver lining to the clouds that brought heavy flooding to Northern Kentucky earlier this year. Ham radio's role in providing emergency communication in the flooding's wake has resulted in a windfall for that region's hams--courtesy of AT&T. Seventh District Emergency Coordinator John Meyers, N4GNL, of Covington, Kentucky, says AT&T has agreed to spend some $100,000 to set up a VHF repeater, a UHF repeater, antennas, and a shack with air conditioning and heat at one of its cellular telephone sites. Other sites will be equipped as receive-only sites and tied back to the repeater. As part of the deal, the Northern Kentucky Amateur Radio Club agreed to cover the electricity and phone bills. Meyers says he's already gotten four Northern Kentucky counties (Campbell, Boon, Kenton and Pendelton) plus the City of Falmouth to pitch in for the utilities at the sites.

Meyers says ham radio was the only means of communication for the first four days of the floods. Many of the club's members remained on duty to help out during the flood recovery. Hams' efforts during the flooding attracted the attention and respect of local governmental officials and of AT&T, which saw the possibility of a mutually beneficial arrangement. AT&T had been hoping to gain access to several possible cellular telephone antenna sites that had been off-limits. With the ham equipment on board, however, the cellular sites gained emergency communication status--just what was needed to get the moratorium lifted on their use by AT&T. "The marriage came together really good," Meyers said this week. "AT&T needed some sites, and hams needed the coverage."

In addition to the Kentucky repeater, AT&T also plans to set up a similar emergency system for hams in Southwestern Ohio, which also suffered from this year's flooding. Meyers says AT&T's total commitment is in the area of $300,000. When it's all in place, Meyers says, a huge region in Northern Kentucky, Southwestern Ohio and Southern Indiana will be accessible using a 2 W hand-held transceiver.

If all goes as planned, Meyers hopes to throw the switch on the first new repeater site in Edgewood, Kentucky, by year's end. Great Lakes Director George Race, WB8BGY, has been invited to take part.

ALABAMA HAMS GET HAM RADIO EXCLUDED FROM ORDINANCE

Ham radio antennas have been specifically excluded from a recently passed Communication and Telecommunication Facilities ordinance in Dothan, Alabama. Working with information provided by the League's Regulatory Information Branch, members of the ARRL-affiliated Wiregrass Amateur Radio Club turned out at the Planning and Zoning Board meeting in Dothan last month to ensure that the new ordinance did not adversely impact ham radio. Roy Dancy, N4AN, reports a dozen hams showed up at the meeting--somewhat to the surprise of Board members.

Alabama Section Manager Tom Moore, KL7Q, congratulated the club members on their success.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Last week's major geomagnetic storm was really confined to Friday, when the global A index went clear to 45, and global K indices went as high as seven. This was from the Tuesday, November 4 solar flare, and the later flare on Thursday didn't seem to have an effect, indicating that the energy was probably aimed away from Earth. Protons from these disturbances produce an effect a few days later, and the Thursday event didn't seem to bother conditions over the weekend. On Saturday the global K index dropped down to 0.

Solar flux backed off also, and was soon below 90. It perked up again to the low 90s on Tuesday. Watch for solar flux to rise to 92 or 94 this weekend, then above 100 around November 26, above 110 by month's end, and below 100 by December 4. Unstable geomagnetic conditions may return around November 20-23 and December 3 and 4. This is based on the last solar rotation, and can change at any time. For instance, the last 27 day outlook from NOAA released on November 11 showed flux values around 80 from November 14-20, but then new regions 8106, 8107, and 8108 appeared on the solar surface, and now forecasts are looking up.

Expect good conditions during the ARRL Phone Sweepstakes this weekend.

Sunspot numbers for November 6 through 12 were 60, 60, 61, 40, 28, 28 and 26 with a mean of 43.3. The 10.7-cm flux was 105.3, 94.4, 89.6, 86.4, 89.4, 91.5 and 87.2, with a mean of 92, and estimated planetary A indices were 12, 45, 4, 9, 10, 6, and 3, with a mean of 12.7.

Here are some projections for domestic paths for ARRL Sweepstakes this weekend.

From the West Coast to the Northeast: Check 80 meters 2330-1300 UTC, 40 meters 2200-0100 UTC and 0500-0930 UTC and 1130-1500 UTC, 20 meters 1500-2100 UTC, and possibly 15 meters around 1800-1900 UTC.

From the Southeast to the West Coast: Check 80 meters 2330- 1300 UTC, 40 meters around the clock, with the strongest signals from 0030-0200 UTC and 0600-1000 UTC, 20 meters 1530-2130 UTC and possibly 15 meters 1800-1900 UTC.

From Ohio to Texas: Check 80 meters 2100-1430 UTC, 40 meters very strong around the clock with the strongest signals from 2330-0100 UTC and 0600-0900 UTC. Check 20 meters 1430-2130 UTC. 15 meters may open around 1800 UTC.

From the Northwest to the Midwest: Check 80 meters 2230-1530 UTC, 40 meters around the clock, with strongest signals 0030-0300 UTC and 0700-1330 UTC, and 20 meters 1600-2330 UTC. 15 meters may open 1800- 2130 UTC and looks promising around 1930 UTC, and 10 meters might open 1900-2000 UTC.

From the Midwest to the Pacific (Hawaii): Check 80 meters 0300-1430 UTC, 40 meters 0200-1530 UTC, 20 meters around 1600-2330 UTC and 0130-0230 UTC. 15 meters looks very good 1730-2330 UTC, and 10 meters from 1900-2030 UTC.

BRUCE L. KELLEY, W2ICE, SK

Antique Wireless Association cofounder and AWA Museum curator emeritus Bruce Kelley, W2ICE, of Holcomb, New York, died November 6, 1997. He was 82.

Kelley, along with George Batterson, W2GB, and Linc Cundall, W2LC, founded the AWA in 1952. The museum stemmed from one that Kelley had set up in his barn in the late 1940s. Kelley had just recently stepped down as curator of the AWA museum in Bloomfield because of ill health. An April 1991 QST article about the AWA Museum called Kelley the "guiding light" of the museum.

Bruce Kelley was very well known as a radio historian and among vintage radio collectors. He was a frequent contributor to the AWA journal, The Old Timer's Bulletin and was co-author of "Hams Span the Atlantic on Shortwave!" that appeared in the December 1996 issue of QST and won the QST Cover Plaque Award for that month. Kelley assisted in the preparation of Ken Burns' TV documentary "Empire of the Air," some of which was filmed at the AWA Museum. Kelley also produced the video, "The Trans-Atlantic Tests and Station 1BCG," available from the ARRL. He also was club historian for the Rochester Amateur Radio Association.

Kelley was first licensed as W8ACY in 1929 and had been a continuous member of the ARRL since then. He was retired from the engineering department of Eastman Kodak.

Ed Gable, K2MP, who recently succeeded Kelley as museum curator, said, "The world has lost a true radio historian and a great radio amateur."

AWA President Bill Fizette, W2DGB, recalls he first met Kelley in the 1970s, after he was introduced to the AWA. "Even at that time, Bruce Kelley was

somewhat of a legend among the members. He seemed to be everywhere and do everything, from building a museum of early wireless apparatus, now one of the best in the world, to editing and producing the club bulletin, to officiating at the conferences, to maintaining an extensive outreach program--the list goes on," he wrote. "I thank Bruce Kelley for the inspiration and opportunity he gave to us. He was a leader and a very unique person, and he will be missed."

Survivors include his wife, Helen. Services were November 13 in Bloomfield, New York.

MARY D. "MAE" BURKE, W3CUL, SK

Champion NTS traffic handler Mae Burke, W3CUL, of Seminole, Florida, died November 5, 1997. She was 86. Mae Burke was a member of the ARRL and of the A1 Operator's Club. She won the fifth Edison Radio Amateur Award for public service for 1956 (see QST, Apr 1957, p 68). At that time, she was operating daily in six CW nets and handled some 312,000 messages between 1949 and 1957.

Her husband, Alfred Burke, W3VR, survives.--thanks to Michael Wacker N3HR

IN BRIEF:

* This weekend on the radio: CQ SS, CQ SS! It's the ARRL November Sweepstakes SSB weekend! See October QST, p 116, for the rules. Also this weekend: the North American Collegiate ARC Championship (SSB) which runs concurrently with Sweepstakes and uses Sweepstakes rules (more information is available at http://www.jbj.org/~pk/clubs/cc.html); the ARRL International EME Competition; and the IARU Region 1 160-Meter Contest (US participation is welcome). See November QST, page 94 for details.

* Sputnik PS2 QSL information: Here's what we believe to be the most reliable information to obtain a QSL if you've received the beacon signal from the mini-Sputnik satellite on 145.82 MHz. The satellite has been heard all around the world. Reception reports go to The Radio Club of Jules Reydellet school on Reunion Island. Those whose reports are confirmed will receive an approximately 6x9-inch color certificate on high-quality paper with number identification and the radio club stamp. Requests for these certificates should be made only by letter with an SASE (6x9 inch) and two (2) IRCs. Do not send requests via e-mail! The mailing address is FR5KJ Radio Club, 103 Rue de la Republique, 97 489 Saint Denis Cedex, Reunion Island. Requests will be processed after the satellite has expired.

* Ooops! Correction: ARRL Lab Supervisor Ed Hare, W1RFI, made a mathematical error in our report "FCC Sets RF Safety Evaluation Threshold for Repeaters" in The ARRL Letter, Vol 16, No 44 (he really does know better!). Here is the correct calculation for determining ERP: It's fairly simple to calculate ERP. Take the PEP input to the antenna and multiply it by the numerical equivalent of the antenna gain in dBd (dB relative to a halfwave dipole in free space). Gain relative to an isotropic radiator (a point source), dBi,

can be converted to dBd by subtracting 2.15 dB from the dBi number. For example, say your repeater puts out 100 W and has 3 dB of feedline loss. Calculate: 100 x 0.5 = 50 W to the antenna. The antenna has 8.8 dBd of gain, or 7.59 as a decimal. So the ERP is 50 x 7.59 = 379.5 W.--Ed Hare, W1RFI

* Vanity update: The FCC in Gettysburg, Pennsylvania, reports it has processed all vanity applications and work in process (WIPs) through October 17, 1997. In all, 52 applications were granted, 42 went into the WIPs stack. The FCC begins accepting applications for vanity Gate 4 on December 2.

* Amateur Radio calendars available from ARRL! CQ Amateur Radio Calendar: 15 Month 1998/99 calendar, with beautiful color photos of stations, antennas, and well-known amateur radio personalities. Calendar detail includes notable contests, phases of the moon (and perigees/apogees), meteor showers, and holidays. ARRL Order #6516 $9.95, plus $3 shipping (UPS). CQ Radio Classics Calendar: The rigs of yesteryear are remembered on the pages of this 15 Month 1998/99 calendar. Beautifully photographed vintage ham equipment introduces each new month. Calendar detail includes notable contests, phases of the moon (and perigees/apogees), meteor showers, and holidays. ARRL Order #6532 $9.95, plus $3 shipping (UPS). These calendars and other new products can be quickly ordered via ARRL's New Products Web page, http://www.arrl.org/catalog/new.html or call toll-free 888-277-5289, Monday through Friday from 8 AM to 9 PM Eastern time.

* Bogus bulbs? Merit Arnold, W6NQ, of RF Parts in San Marcos, California, asks in an Internet posting if anyone has encountered counterfeit high-power transmitting tubes (eg, 3-500Z, 3-500ZG, 4-400 series) at flea markets or through overseas suppliers. He says that since Eimac left the glass tube business, he's learned of instances where Eimac and Amperex logos and cleverly copied markings or labels have been applied to tubes manufactured in China which are then packaged in yellow Eimac-style or Amperex boxes. Arnold says that recent-issue Eimac 3-500Z/ZG tubes will have the Eimac logo imprinted on the grid shroud. Also, he says, Eimac will usually have the serial number engraved with vibrating pencil on the shroud. On the other hand, the counterfeit overseas tubes will have the date code and serial number stamped along the edge or on top of shroud (first two digits indicating year of manufacture). Counterfeit 4-400 series "Amperex" tubes use a "slip-on" anode terminal with a set screw. Genuine Amperex tubes have the terminal fused through the glass. W6NQ would like to hear from anyone who has run into these bogus tubes. E-mail him at rfp@rfparts.com.--thanks to Marv Gonsior, W6FR

* Microwave Update 97: Proceedings are available from the ARRL for $15, plus shipping. Order Item Number 6389. Contents include "Make Any Car Into a Ten Band Rover," by Jim Mitzlaff, WB9SNR; "Parabolic Dish Feeds--Performance Analysis," by Paul Wade, N1BWT; "Care and Feeding of a SETI Dish," by Paul Shuch, N6TX, and much more.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Please explain what you mean by "higher quality falks."

I know a lot of CWers (without advanced) who don't know how to change
the freqs by using VFO. Does this make them high quality ??

Ohh.... I have to mention (:( ). You can have advanced license
without CW, but the band set is same as the basic... here in Canada.

> On CW, you get real QSOs with real people (some
>CW DXer/contesters excepted).

then no CWers aren't real people ??

I don't think so...

> Any suggestions in this area greatly appreciated

It's important to tell us whether this villain will be trying to send
his video to amateurs or to "insiders" who are able to use special
sets to receive his programs or whether he is he trying to send
global transmissions to home television viewers using their regular
domestic TV sets and channels in different countries around the world.

Your suggested frequency implies the former but your use of the word
"broadcast" suggests the latter. Both are possible with suspended
credibility that can be demanded from readers of a work of fiction,
but the techniques would be quite different if you want technically
literate people to enjoy your novel as being good science fiction.

Yes of course, and since Burt is a teacher he clearly understands that
we all have
exactly the same talents and learning abilitys so if an 8 year old can
pass it it's clearly a 'no brainer' for everyone else on the planet.

Well stated Burt, do you apply this same logic in your class?

Tim

And it is also more amateurs than applied for or updated their DXCC status in 1996. Think of it, more Clover and PACTOR II operators than Dxers.

WANTED:

Robert BAUMAN GROTH COUNTER model TC-35 with 3" spinner knob.

This counter is approximately 2"x4" in black plastic and mounts with a center 1/2" hole. The body mounts with 4 small screws, 2 each at top & bottom. PREFER with 3" matching spinner knob. (trying to match one that is already on amp.)

Contact either by e-mail: w4dg@ibm.net or telephone A/C 813/391-9912.

Oh, dear. My correction needs correction. The above calculation is for EIRP
and represents the actual power that must be used to calculate power density
in the main lobe if you are doing an RF exposure evaluation. But the FCC, via
OET65, really does want us to use gain over a (imaginary) free space dipole
when determining if we are required to do a RF exposure survey.

I'd caution that the 2.15 dbi free space dipole factor should be viewed merely
as an arbitrary offset from the true antenna gain, and has very little relation
to the gain a real dipole located in the same spot would have. That could be

as much as 5 db either side of 0 dbd depending on environmental factors. So don't go trying to measure the gain of your array by comparing it to a dipole and expect it to align with that fudge factor unless you are equipped to compensate for any and all site environmental effects.

And on that topic, most amateur antennas have eye wash for a gain specification. Mostly the gain figures given for amateur antennas are hype, but in a few cases gain is actually understated, perhaps because of measurement errors on the manufacturer's antenna range (if he has one). Now that antenna gains impose a legal liability on amateurs, we need to do something about this.

Since antenna gain is now a parameter that amateurs will need to know, either to see if they are exempt from doing an RF exposure evaluation or to do an RF exposure evaluation by calculation, manufacturers should provide that information in their advertising. But QST policy won't allow that. It would seem that it is time to review that policy.

And since so many of the amateur antenna gain claims are eye wash, a way to determine the accuracy of those claims is needed. In line with that, I'd suggest that QST needs to provide range verification of manufacturers' gain claims in their antenna product reviews. That will require setting up and qualifying an antenna range, but that's a good thing, and could serve as the basis for a whole series of tutorial articles on how to do that correctly. That could be of real benefit to radio amateurs.

Observational evidence disproves this. There is very little building in
amateur radio today. With the exception of certain experimental equipment,
today's average operator uses a variety of store-bought items to fill out
his shack. In many instances, much "building" that occurs today is in the
form of kits which really do not represent "building", but mere "assembly"
as in "some assembly required".

Given that only a tiny fraction of hams today build their radio gear,
it seems very prejudicial to require *ALL* amateurs to take theory tests
just "because" they can build if they so choose. The same argument that
the No Code Agenda touts -- "if only 27% of HF-eligible amateurs are using CW,
why require it for testing?" equally applies to theory testing on the
basis of "building". Far less than 27% of all amateurs engage in any
form of building activity (less station construction, like soldering
PL connectors, grounding equipment, and so on -- akin to if you had a
VCR and was connecting it to your TV set), thus "if <27% of amateurs are
building their own equipment, why require it for testing?", the "it"
being the "theory" that the No Code Agenda claims "has" to be present.

Dear radio hobby club volunteer:

FBOM Magazine Online, the interactive version of FBOM Magazine, is offering to post information about your non-profit radio club's hamfests, jamborees and other large radio hobby-related events free of charge on our web site (http://n-lemma.com/FBOM/).

The only strings attatched are that your club is a non-profit organization and you can use some extra publicity.

These listings will be continously updated. As an added incentive for others to rely on the listings, we will contact you 2 weeks prior to your event and put a "Confirmed or not confirmed by FBOM" stamp on the listing.

Please send us information about your club's fundraising events as soon as possible. You can also use a form on the our web site. Simply click any references to "Hamfest listings."

For any questions, email the Publisher, Eric Bond, N9VJG (n9vjg@n-lemma.com) or the Webitor, Chuck Brown, N9UPO (n9upo@n-lemma.com).

Feel free to spread the word to other radio hobby-related clubs and organizations.

Thank you and 73s

Eric Bond, N9VJG W.C./NCI-1099
Janitor and Publisher

That too. My point still stands, and that is that most hams are BORING, at least on the air. The FCC prohibition on broadcasting by hams reduces most hams to making small talk with buddies on air and engage in a sort of *my dick is bigger than yours* race (figuratively speaking, of course). If hams could broadcast programs to the listening public, more people would want to be hams and more people would want to listen to SW. And to all the hams who hate the concept, let me remind you that the first amateur stations DID broadcast to the public. KDKA, KCBS and a handful of very early broadcast stations were licensed as amateurs because there was no law allowing for general broadcast licenses.

>

Deignan is quite clever in attempting to make a parallel arguement and my hats off to him. But he has fallen victim to a fallacious arguement that is often percieved by the pro-code testing advocates. That fallacious arguement to which I refer to is that Morse code testing should be abolished because only a minority of amateurs use Morse code. Nothing could be further from the truth.

The fact that only a minority of amateurs who use it only supports the proposition to abolish such testing. Indeed, the need for testing is to satisfy the government's legitimate concern of mitigating interference among the users of the radio frequency spectrum. Morse code testing does nothing to satisfy the government's concerns, regardless if its use is by a minority or a majority of amateur, its continuance is wholely dependent upon international treaty only.

What of Deignan's proposition that theory testing is unnecessary because few amateurs do not build their equipment? If that is what the majority wish to do, I would suppose that there wouldn't be much choice in the matter. However, since the government has a legitimate interest in mitigating interference among the users of the radio frequency spectrum, I would imagine that as a quid pro quo, amateurs would have to operate with type approved/acceptable equipment. If that were the case, then amateurs would be restricted from undertaking in activities that they now enjoy. For one thing, since they cannot "home-brew" their equipment, they won't be able to even tinker with it with the objective of "improving" its performance. Furthermore, would no longer be able to use surplus commercial or military equipment when available. (As a matter of fact, my club, the Ottawa Amateur Radio Club, is holding a sale on November 29 on behalf of a local communications provider surplus VHF and UHF hand-helds and mobiles. In accordance with Deignan's proposition, all those radioes would be thrown in the dumpster.)

Such type approval/acceptance would likely drive the price of amateur equipemtn quite a bit higher. Indeed, it would likely strengthen the stranglehold that the Yeacomwood would have on the market. However, there would be no need for an examination at all, and there will be millions and millions of amateurs, so I would imagine that such large numbers would drive down the prices of amateur equipment. No one would be able to talk to anybody, but then again, who cares? They have no technical background anyways.

If Morse code testing were to be eliminated, amateur priviledges would be unaffected because it is just another mode of communications (although I do realize that my US collegues would be in a bit of a quandry because their certification system is based, on the most part, of the primacy of the Morse code. For example, if Morse code is dropped, is there any real need for the General, Advanced and Extra class certifications? I can see that many Extras would have their noses out of joint believing that they had "earned" there priviledges. Whether they should have been forced to have done so is an arguement for another thread or newsgroup.) On the other hand, if theory testing were to be eliminated, many of the technical priviledges that amateur now enjoy would be lost. Indeed, then amateur radio would be nothing more than a high powered CB service, which I had said in my earlier posting and Deignan conveniently, at least for his sake, had not included in his response. If amateurs are willing to accept those consequences of eliminating theory testing and turning amateur radio into a high power CB service, he can do so. Regardless of Deignan's objectives, once again, Deignan is reminded that the reason for testing is to satisfy the government's legitimate interests for managing the radio frequency spectrum. Morse code testing certainly doesn't.

Hello all.. I am looking for a mod to make a UHF Micor mobile into a repeater. I have one mod that seems to be all over the net, but it is not complete. If somebody could, please send me a complete mod or tell me where to get it or who to get it from.

I was very pleased with Virginia Power (Fredericksburg, VA) several years ago. I called and talked with their "interferrence technician". He came out with a truck equipped with a directional antenna and receivers that would tune 100 Khz to 300 Mhz. He found an old type insulator being used and had all of them in my local replaced. He even went onto the military power station down the road and checked to see that it wasn't causing any problem.

If your problem is intermittant, make a recording of the noise so you can play it for the technician. If you get interferrence "speckles" or rolling dark and light horizontal bands on your TV, (the lower channels 2, 4, 5 are usually the worst), make a recording of it on your VCR so you can play it for him. The bands are very helpful because it proves that the interferrence is syncronized to the power frequency. The goal is to convince the technician that your interferrence is comming from the power lines, and not some other source. Of course, if the intererrence is there when he is around then you have it made in that department.

My experience with noise blankers and such is that they are not very effective against most power line noise because the pulse width is too wide. Most of these devices are designed to handle very narrow impulse noise such as automotive ignition.

Good luck

Bob

Source record: 186483

obb3009@InfoNET.st-johns.nf.ca (David Dawe) writes:
>Can I convert ham unit to aviation freq.?

In general, it won't work. Even if you find a ham transceiver that will transmit with decent power output in the 118-136 MHz range, its transmitter uses FM modulation. Aviation comms use AM, so you'd need to convert the unit to an AM modulator. The RF output amplifier is probably quite non-linear for efficiency in amplifying FM, but may distort AM badly, so you'll probably have to modify or replace the RF output stage.

Not an easy job. Unless you enjoy experimenting a lot, it's better to just get a transceiver designed for aviation use.

In addition, any modified ham gear is illegal to use on aviation frequencies. But you knew that already, didn't you?

This will be short because everything is available on our web site and to
avoid a long download.

##################################
THE RCI FEDERATION ANNOUNCES
##################################

RCI-ROM 1.1
A CD-ROM for RCI 2950, 2970, 2980, 2990, Saturn, Satutn Turbo and similar
rigs owners.

All the mods well explained with texts, photos and videos
No a simple listing of Howtoos but a real multimedia product with menus,
musics, sounds...

Multimedia part:

Full Diagram: Main Board + CPU board + Microphone Encyclopedia
Full listing of all the components
Full table of voltage values
Full table of frequencies - channels
Full alignment procedures
Repair tricks, errors, enhancements...
Plenty of mods with photos, videos, voice explanation....
Extreme mods "for transverting to other bands" chapter
A full DX Guide with beaming utilities & programs
A Rci Packet chapter: How to practice Packet with your rig
A complete information on the RCI Federation, the full collection of
already published RCI Newsletter...
The RCI BIBLE 3.0 beta (exclusive)
+ Over 1500 mods for other rigs (Ham and CB radios)

Video part

Component section ID
Internal Controls ID
Channel conversion on new 2950, my old one got stolen.
MRF477 intro and removal of 2SC2312's
MRF477 pin reconfiguration.
MRF477's installed and AMC transistor location.
Observing the radios output on a scope and wattmeter.
Introduction of the Heavy swing modification.
Candlewax (just watch it!)
Observing the effects of the swing kit modification on the
Wattmeter and scope.

Disassembly of the radio.

and much, much more.....

The needed computer will be:
486DX2, Pentium, Pentium Pro, or any other compatible
RAM: Minimum 8 Mb - Hard Drive: 20 Mb free on the disk
Video: 800x600 VGA or upper
A CD-ROM reader 4X & a SoundCard
Everything is in English.

Price: $35
- Credit card Visa/Master Card
- Cash
- Mail orders
- Resellers and importers, please contact for other payment protocols.

Date of release: 30 October 1997. AVAILABLE NOW !!!
We directly deliver 96 Hours in any country and we are looking for local resellers or importers. Please advise.

There is a beta version available at our web site: http://rciweb.cadic.com (9 Mb in a EXE autodecompressing file).
This CD-ROM is the product of an international collaboration (France - USA - UK)

RCI Federation (R)
ACQ - Box 2887
41028 Blois Cedex
France

Non profit making registered association
All the profit is re-invested in the interest of the community.

Actually, all pilots use Morse to identify navigation radio becons.VOR and ADF
stations modulate morse at 1050 kHz, TCAN
(military) modulates it at 13 - something kHz, and I forget where
DME has the "ident".

You're suppose to verify the letter designator of the station that
you tune to while using the navigation radio.

And it IS more reliable.

> That should tell you
> something. I find it humorous that the "know code" faction preaches
> about how great Code is, yet can't explain why this so obviously great
> and wonderous communications mode is rejected almost unanimously.

It's great because the entire power of the signal is concentrated at,essentually,
a single frequency. It is great because a trained ear
can pick morse code out of a lot of noise.

A buddy of mine who was a communications officer in Brittan
told me a story about how his unit was setting up a big rhomboid
antenna for HF communication with another outfit in South Africa.

He watched his men fiddle with the antenna, then go huddle near
a fence and then go back and fiddle somemore with the antenna.

He was curious and went to see what the huddle was about. There
one of his men was tapping out in morse code, low power, and
was communicating with the South African unit. They were
checking to see if they were getting a signal with the big, offical

rhomboid antenna. You can do with code with a few watts what
takes a few kiloWatts with voice.

People don't use code anymore because it's too hard to learn.

> on.

While I agree that code and voice are two different things. considerbandwidth.
Code is MUCH more efficient, power wise. It also take
up much less spectrum. 3 kHz voice requires much more power than
a couple dozen Hz code. And code is much less suseptible to certain
atmouspheric efficts, or the effects of speech intelligibility. And since
there is only 30 MHz of HF anyway, at 3 kHz per voice, it would get
used up with not a whole lot of communication.

The reason why code is required of Hams is because it's simple
stuff. The transmitters are simple, and so are the recievers. Its
harder to screw up, and when you do screw up, you take out
less bandwidth. Of course, in this day and age, Ham radio is
no longer about radio technology. Only heros build their own
rigs anymore, and most who do build their own are looked
down upon by the guys with the multi-thousand dollar rigs
from ICOM. Code was required of novices because it
was easier to build and operate and screwing up did less
damage to the frequency space.

> I would buy your "basics" argument except that Code is the "basic" of

I have two bugs myself. Don't have one of those neat little computerprograms, But
then, I let my license lasps. No time to listen to old
men talk about their latest prostrate operations anymore. :-)

> For the record, I got my ticket the "hard way"; if you're going to rip
> me, find another angle.

Good for you. But getting your ticket is not an excuse for notknowing the
advantages of code. It's basic radio communication
stuff. You seem to be well aquainted with its disadvantages, which
is good.

Tom, any power line noise that is "excessive" should be reported to
your power company. Unfortunately, your report and complaints will
not get much priority - especially if they think you aren't important.

I went through a year-long process with Virginia Power and finally
won. They finally yanked two lightning arrestors on a HV line that was
"two blocks" and 1/2 mile respectively, from my home that were giving
me S7 to S9 grief during most daylight hours. I kept detailed records
of all my telephone conversations and FAX's to them, collected names
and telephone numbers, invited them to come and take a tour through my
QTH, and I kept steady pressure on them at least once a month. When
the right guy took up my case, it was all over withing two days. and I
now enjoy an absolutely quiet 80M and 40M band.

One thing you will need to establish using a mobile rig, is that the
noise is indeed excessive (in relation to other comparable and similar
situations) and that it is localized (in other words, if the noise is
at the same level everywhere over several square miles of area, you're
probably out of luck). The source of the noise must be sufficiently
localized that they can see a limit to the scope of their problem.

In my case I was able to localize it to a specific pole using the
mobile rig plus a transistor portable AM/FM receiver.

#->
#->DRD
#->
I have a feeling you're right on the mark on this one. I've never voted
for a democrat, and those who know me already know this by heart.

But if you will remember that it was a Republican from Louisiana that
proposed the most damaging law. In its original form, it would have
made the U.S. the most restrictive in the world in terms of scanners.
This is a situation that you would have assumed only occured in
communists countries such as the old Soviet Union or China.

Americans better be exceptionally careful. This is not the only
thing Congress wants that you have. They continually pass
more and more restrictive laws on guns and other things that
when I was growing up in the 1950's and 1960's there wouldn't
have even been an arguement over in terms it was off limits
for the federal reps to even consider such a law.

Well scanner fans, welcome to the United Socialist States of America.
And this is just the beginning. It's called gradualism. They take a
little here and a little there while people aren't watching and Congress
buries these super-restrictive laws inside other laws that have

absolutely nothing to do with the original subject.

You/we had better watch Congress like a hawk. The next thing
the'll come for are your children to send to Government controlled
brainwashing schools. It's not too far off either. I've checked some
of my kids school texts as well as teacher-assigned homework and
I'm amazed at what these people are doing.

Well, so much for that sidebar soapbox. Apologies for takeing up
so much bandwidth. But I happen to feel this is extra-ordinarily
important, and if American's don't wake up, what used to be their
country will soon be under total control of the United Nations.

Don Johnson, the inventor of the "screwdriver antenna" sells them complete except top whip for $150. And they are first class.
He also will make a horizontal one for fibreglas pickup toppers and only the whip is exposed and no chance of detuning.
I have been using mine for 3+ years without any problem.

Newt does not back the bill his office told me just last week when I
called about another issue. Tauzin is a wolf in sheeps clothing. He
did convert or switch partys just to save his rear end and keep his job,
but as we can see, he is still a confiscatory democrat through and
through.
Why is it that democrats are the ones always trying to take stuff away
from Americans? They passed the Brady Bill, Assualt Weapons Band, Radar
Detector Bad for trucks, the largest Tax increase in history, etc, etc.!

And the Republicans don't take any of our rights away?! They don't raise any taxes?! Everytime a law is passed by either side, you lose more freedom! Why vote for the side that will tax you a little less?!

Only the Libertarian Party will not take away your rights, will abolish any of the silly laws against scanners, and will abolish the IRS and the Federal Income Tax! The Republicats (one and the same party) will continue to do keep going in the same direction.

I have had my Hr2510 for about 1 month so far. I am very pleased with its operation. I have had several things done to the unit to get it to work properly. I have had the chip changed to recieve more freqs. I have had a costom modulator put in. this radio had very little swing to it from the factory. Now the radio dead keys 3.5 and swings to 40. The one thing I am not pleased with is that I miss the talkback that my old cobra had. I have asked many people if there is a way to add talkback to this radio. I have a talkback mike. Any help would be apretiated.

I still use Windows 3.1 at home for business/personal and ham radio
use. The corporation that I work for uses Windows 3.11 exclusively
on their PC's. They have a lot of proprietary software that may not be
compatible with Win95.

Don't be in a rush to declare Windows 3.XX dead.
There's a large number of users - the kind of folks that don't rush
out to buy the latest - that will probably use Windows 3.XX for
another 2 or 3 years.

>Why are we still poodling around at 1200 baud?

Ah, but we are gradually moving towards 9k6 via radio. Some clever
people are using Turnpike software and Internet Explorer on these radio
links.

Some really clever people are not bothering to use radio for long
distance links. When nobody is looking, they route their local radio
links to the nearest educational establishment and long haul it via the
Internet (but don't tell anybody about that).

All leading edge of technology stuff!

Don't know about where you guys are from, but NC requires a little school
called BLET and then you can try and get a job as an officer. That seems
harder than the old way of OJT. And the same for the fire service,
retired after 23 years and it is harder than ever.

Back to the code! Keep it but also make amateurs prove they are
proficient in packet, amtor and all other sub cultures of radio. This
includes having respect for others.

This Vince-o-gram actually requires two answers.

Answer #1:

So as long as amateurs have the unique privilege allowing them to build and test their own equipment, theory testing will be required. Contrast the privileges given to amateurs with the ITU General and Restricted certificates. You will note that those examinations have a low level of theory i.e. check for fuses, battery acid levels, etc. Those holding those certificates are limited to operating type approved or accepted equipment. Indeed, experimentation to "improve" that same equipment is disapproved of. This is not the case with amateurs as they are not required to operate with type approved equipment. Therefore, if theory testing is deleted in order to be an amateur, then all we will be able to operate is type-approved equipment. As a result, no tinkering would be allowed of that equipment, let alone being allowed the opportunity to experiment with our gear. At that point, we will be indeed a high powered CB service.

Answer #2:

What if I do forget it? You gonna call me a lying sucker, too?

I have a Standard C528A 2m/440 handheld I would like to sell.
It's clean, lightly used, and has a new battery pack. It puts out 5
watts on both bands. It comes with the manual, schematic, and original
box. I've done the keyboard mods to extend the TX/RX range. I'm asking
$300 US but will entertain best offers. If you are interested, please
email me at perry@alpha.jpunix.com.

Yes, but keep in mind that we have more than a handful of democrats
who changed parties. They stuck their fingers in the air and said "I
better go over here if Im going to keep my job!"
They still vote like democrats on important issues.

2999. Re: CW Test in the US

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-16 00:00:00 UTC
From: reality459@aol.com
Message-ID: <19971116140101.JAA22569@ladder01.news.aol.com>
Source record: 186547

Masa;

Suggest you do a bit more research into the U.S. CW testing requirements before you go off 'half cocked'. There's more there than you report. You might download a copy of Part 97 and check with some of the VEC's and do some research. It sounds like the U.S. CW exam is a 'snap' according to your response.

3000. Need Specs, Schematic & Pinouts for MFJ-1278 Please

Newsgroup: rec.radio.amateur.misc

I understand that the 1278b manual is 170 pages, I guess the 1278 is close to that ... wow! I just need the specs, schematic, and pinouts from the 1278 manual. (I understand also that there were multiple versions of the 1278, how does one determine which one has?)
If someone would list the proper specs for the 1278, or tell me how to get the 1278 to tell me what they are, it would be much appreciated!
I'll pay reasonable copy and postage as agreed in advance, or you could scan them and E- mail them as an attachment, or fax them to me at 617-674-2824 (Please be sure to put "David Colburn" on the fax as there are 4 Davids at that number!)

Reprinted from from The ARRL Letter Vol 16 No 45

* Bogus bulbs? Merit Arnold, W6NQ, of RF Parts in San Marcos, California, asks in an Internet posting if anyone has encountered counterfeit high-power transmitting tubes (eg, 3-500Z, 3-500ZG, 4-400 series) at flea markets or through overseas suppliers. He says that since Eimac left the glass tube business, he's learned of instances where Eimac and Amperex logos and cleverly copied markings or labels have been applied to tubes manufactured in China which are then packaged in yellow Eimac-style or Amperex boxes. Arnold says that recent-issue Eimac 3-500Z/ZG tubes will have the Eimac logo imprinted on the grid shroud. Also, he says, Eimac will usually have the serial number engraved with vibrating pencil on the shroud. On the other hand, the counterfeit overseas tubes will have the date code and serial number stamped along the edge or on top of shroud (first two digits indicating year of manufacture). Counterfeit 4-400 series "Amperex" tubes use a "slip-on" anode terminal with a set screw. Genuine Amperex tubes have the terminal fused through the glass. W6NQ would like to hear from anyone who has run into these bogus tubes. E-mail him at rfp@rfparts.com.--thanks to Marv Gonsior, W6FR

Yes Bob, few utility groups have the tools to find the defective components that cause the grief. Over 40 years now at all this, I've learned what you have also learned. If you really want to get the noise problem fixed, do two things.

1.) Acquire or borrow the tools to really narrow the search down to a specific pole or component. Portable rx, loop, small beam, even an ultrasonic directional microphone/down converter affair to listen to the corona can be fun (You'd be surprised to find out what insects sound like!)

2.) Develop a friendship with one of the key supervisory level people who is willing to learn that you do have access to the tools and know how to reasonably narrow down the search to the bad component. On several occaisions, for example, I've lead these folks to circuit breakers that were tripping for no apparent reason to them! They are mysterious outages to them, but to my 80 meter 4 square, they are pop, pop, pop pop, once every few seconds or so from where they are arcing inside in the oil

filled cases! A mobile rx with a loop and a vhf hand held
with a small beam work wonders on this stuff. Incidentally,
the bad sites I have found for them have been as far away as
four miles from my QTH in the country!

You may also discover that your neighbors have devices in
their homes that are terrific noise producers and very tiny
things. These fan and light dimmer triacs can cause BAD
noise. You don't want to get the power company out on
deals that are not their deal either. Finding out that one
of these deals is in your own place before the power crew
tells you that it is becomes of paramount importance if you
want them to hop llike a bunny the next time you squawk!

Those things done, I've found that at least three different utility groups here
are HAPPY to get the stuff fixed VERY quickly. They don't want any of
the bad components in there any more than you do. Leaky components
are just service faults waiting to happen and can waste power as well.

Most of the groups, since they don't have the tools and the people to go
find the stuff are tickled to death to find someone that can do the job for
them that is sincere about the job. A couple of "finds" and fixes into
the deal and you will have real friends in these groups.

This said, a word for the original poster...

Why don't you visit one or more of your local ham radio groups?

See if you can strike up a little interest in the DF afficiandos.

You will likely find that POOF... there sare a crew of people out
the in the ham world that are much more interesting and capable
than the average crew in the CB world. If you like what you see
when you do this...

You might even go down to Radio Shack and get a vopy
of "Now You're Talking" and we might suddenly find a
new enthusiastic ham operator in the ranks... :)

ok... I have something that may be interesting to you...

Within last 24 hours (212 access), the access to my web page was the
following:

OS:

- 84% Windows 95
- 10% Windows 3.1
- 1.5% Windows NT
- 1.5% Macintosh
- 1% Unix
- 1% Linux
- 1% Sun OS
- 1% Others

Browser:

- 45% Explorer
- 55% Netscape (23.5% Netscape 4, 23.5% Netscape 3, 6%
Netscape 2, 2% Netscape 1)

around 10% of internet users are still using Windows 3.1.

>but elsewhere the TV tuners may not be able to go down there.

That last sentence looks a little confused. NTSC is only used in North America and in Japan. The rest of the world uses variations of PAL or SECAM. That doesn't have much to do with which frequencies they use, though. PAL or SECAM can be transmitted on the same frequencies we use for NTSC. Of course receivers for them probably won't make any sense of a NTSC signal.

HDTV was supposed to resolve that, but the world couldn't agree on a single standard for HDTV transmission either, so we'll still be incompatible in the 21st century. <sigh>

That means that if you want to do a worldwide broadcast, you're still going to have to do local standards conversions for different national systems. That's another kink this scenario will have to address.

Hello Mike,

I'm glad you added these points:
> You may also discover that your neighbors have devices in
> their homes that are terrific noise producers and very tiny
> things.
> Finding out that one
> of these deals is in your own place before the power crew
> tells you that it is becomes of paramount importance if you
> want them to hop llike a bunny the next time you squawk!

Because I had forgotten to mention them, and they are terribly important. I would like to add "Touch Lamps" to this list of RF Noise producers. Surprisingly enough, they radiate essentially the same amount of noise whether they are turned on or off.

I can't really agree from my own personal experience, that the power company believes that these problems are worth fixing from their own point of view. It may well be the case, but the people that I talked to didn't seem to give that any priority. But eventually, you find someone who is actually interested in the complaints of hams and commercial businesses who use radio communictions.

Bob

David,
The two years in Nick is the max that can be thrown at you. I have only
ever heard of a 3 month sentence being given out and that was in the
good old days of an assault on one of the radio inspectors.
On the other hand, even Eric Gotts was once busted for assaulting a
pirate, and formally charged and found guilty in a court of law!
May I suggest that you're never going to rid the airwaves of illegal
broadcasters, you're not even going to keep them in check. In recent
years much of the funding has been withdrawn from this end of the DTI
budget, they are but a shadow of their former self.
We had interference on our business repeater(for which we pay a
substantial yearly fee to the RA) and they were totally useless. As
there were criminal repercussions involved, the local CID ended up
apprehending the culprits once I had tracked them down with a Datong DF
unit, one of the two fellas is now doing 8 years.
The RA is a waste of time. They got a bollocking from the chief
superintendant of the county's CID.
Just let everyone have freedom of the airwaves then there'd be no
problem.

Hi, all. 's me again. (hehehe).

Just one more inquiry:

I realize this one has probably been asked before, but I'm just curious:

Are there any mods available for the Icom IC-25A to allow IT to RECIEVE out of band? Or to allow it to work some odd split repeaters (I.E. Civil Air
Patrol.. 143.900 in, 148.150 out.)?

If I am repeating an old question, please forgive and bear with me. Take care. And thanks for any help, whether the answer is yes or no!! 73 de N4RDH/Kevin

The above URL is incorrect. Note the last part should be /bcn.htm
NOT the bcn/htm that was listed.

Canada (US ?) does allow you to crossband your voice through
VHF(UHF)-10m, meaning you can transmit 10m WITHOUT having MORSE and
is violation of international treaty (?). Take us to COURT.
Australia permits you to operate on 10m (above 29 MHz) WITHOUT MORSE.
Take them to court.
Japan allows you to operate on many HFs WITHOUT MORSE. Take them to
court also.
Take everyone to the court.... Mr. no-coders...

The test is administered using a cassette tape and a speaker.
There's no amateur rig involved at all.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the
State of California Governor's Office of Emergency Services.

The purpose of this weekly newsletter is to bring those of us in emergency
communications closer together by sharing common ideas, and by introducing
new technology into the emergency services community. All individuals with
an interest in emergency communications, disaster preparedness or helping
the community at large are encouraged to participate here in an open forum.
You will find a virtual community here with representatives from many
different organizations with the same common goal: emergency response. We
encourage everyone, from whatever organization you represent (or just
yourself!) to bring us your ideas, suggestions, concerns, manuals,
handbooks, or opinions so that we may share them with the group. To those
of you who have just joined us, welcome aboard!

Mark M. Renaud N1REL Deputy Director of Emergency Management Millville, MA

...
Stationkeeping:
For those of you who have missed an issue of the Newsletter, we're
including each weeks issue, starting with last week, on the ACS Home Page
at http://acs.oes.ca.gov
in the EMCOMM Bulletin section. Also, a file is available for download
that has February through September's Newsletters in one ZIP'ed file. Enjoy!
...
>From the mailbag:

From: Lynn Young / K7HAM <lynn_young@ci.mesa.az.us>
Dave:
I am a lieutenant with the Mesa Police Department and act as a liaison
between the department and the amateur radio community. There are
several other members of the department that are licensed, including

an Assistant Chief, and a Division Commander.

There is a local group of amateur radio operators that formed the
Mesa Emergency Group (MEG). The mission of the group is to assist
the City of Mesa during any emergency that could limit city
manpower, equipment and resources. Currently the group has about 40
members, including myself. We also work with the local RACES
and ARES groups as much as possible.

I have been collecting as much information from other groups as I can
for comparison purposes, to see what has worked, what didn't, and what
to look out for.

The City of Mesa has been very supportive. There are two open repeaters
(one vhf and one uhf) that our communications division constructed and
installed from surplus equipment. They have the ability to be linked
together and the uhf one has autopatch capabilities.

I appreciate all the Emcomm bulletins, as my packet station automatically
downloads each bulletin for me. I use parts of them on our weekly net
as discussion topics and to get people thinking ahead.

From: Dave Putnam K6BVXV <david_putnam@mwd.dst.ca.us>
Dave:
Hi, We're the Hazard Tribe:

KF6CQX Nick Catrantzos
KB6VXV Dave Putnam
KB6CRD Wayne Swanson
KF6CQV Doug Litchfield
KF6JHH Katy Gibson
KF6CTO Alex Hernandez
KF6DGV Bob Readhimer
KF6CQU Joe Iorio
KF6M6K Rosemary Nall

Together, we are the Security and Emergency Response Branch at the
Metropolitan Water District of Southern California.

We, along with many other licensed hams, are looking into providing
viable emergency communications capability for our district, which
covers six counties in So Cal. We're calling our program EARS
(Emergency Amateur Radio Service), patterned after a similar program
by East Bay Municipal Water District in Oakland.

We would like to run a DX test with the State in Sacto and Los Alamitos!
We have a multiband HF rig in our EOC but are not sure of what it is
capable of.

Much more to talk about...look forward to receiving your newsletter.

Current Events:
Several of you have written asking where you can obtain one of the Project Impact Guidebooks mentioned last month at the El Nino conference in Santa Monica. As you know, FEMA's new Project Impact includes a national awareness campaign, pilot communities around the U.S. that demonstrate the benefits of disaster mitigation, and an outreach effort to businesses and communities using the new Project Impact Guidebook that offers a formula communities can follow to become "disaster resistant."

Information released by FEMA at the Summit includes disaster prevention and preparedness tips for individuals, communities and businesses. Call FEMA at 800-480-2520 to order EL Nino Individual, Business and Community Preparedness Packages. Visit FEMA on the Internet at http://www.fema.gov for El Nino updates and links to other emergency preparedness organizations.

Southwest Idaho RACES
http://www.cyberhighway.net/~relliott/races.html

A good explanation of the RACES mission in the State of Idaho, and a lot of useful amateur radio links can be found here as well. Be sure to stop by the Library; it's extensive!

Don't forget to sign their Guestbook,and send them a note at:
relliott@cyberhighway.net
...
EMC106 Who's in Charge? 2/4 For release 11/17/97

A textbook example of the latter approach to real emergency management is the 1989 airline emergency landing in Iowa. If you have seen the movie and other training videos based on this incident, there is no doubt that there was one person in charge. Coordinating? Of course, but with clearly defined authority and responsibilities. Such a person speaks and acts on behalf of the chief executive of the jurisdiction.

Based on this brief and simplified description of emergency management, you can determine where your community stands. It is up to you to function as effectively as you can within the reality of your organizational structure and political facts of life.

2. PROCEDURES. People cannot function effectively without procedures. Any good procedure should be written. Remember the adage: "If it's worth doing right, it's worth writing it down." Some people can duck responsibility when there are no written procedures.

There is an art to writing procedures so that they are clear, concise, and correct. An overly detailed procedure can be restrictive and unresponsive. Never be reluctant to

use and modify the existing procedures of others to fit your situation. Why reinvent the wheel? Don't waste money on consultants who can't give you a product based on the real world or are experienced in being where the "rubber meets the pavement".

Some emergency managers cannot craft good procedures -- it's an art. But surely someone on staff can do it. Maybe that's you. Then, as a last resort, there is the outside consultant. The consultant is preferably one who is or was employed in the same or allied Public Safety field within the past five years.

Sometimes procedures are prepared by people who have little or no experience in that field of expertise. The departments and people who are charged with executing emergency operations know that and tend to relegate unrealistic and unworkable plans and procedures to the circular file.

At one time it was the standard practice to employ retired flag rank military officers to head up civil defense agencies. By and large they have been replaced by people with strong command, control, and administrative skills. If the emergency management official has any authority, this requirement is a virtual "must."

Source record: 186614

While I respect Phil Karn's many accomplishments, both professional and amateur, if he actually said
>>>>"The Internet has subsumed everything that was interesting about amateur >>>>radio."

he's way off base. The main thing he and others miss is that the main point of amateur radio is "private radio communication for the fun of it" or, to put it slightly differently, "radio communication for its own sake". The main point is that it is RADIO, not wire, fiber, etc., and that it's private, noncommercial, nongovernment. Of course the 'net reaches more people and is more "efficient" - so is TV, the phone company, and the postal system. More interesting? Not if what you like is radio! Sounds like an apples and oranges comparison to me.

To give an analogy, did TV subsume everything that was interesting about the movies? Do improvements in the commercial airlines mean that private aviation has no place anymore? I don't think so!

Ding Dong. My info came from a website called Monitoring Times.
Maybe youve heard of them.
I dont see your happy ass working to stop this bill. Did you provide
the large list of phone numbers of the sponsors and signatories of this
bill?????? What have you been doing to save the hobby?
Nothing, right? Probably not a damn thing.

Hi Gary,
Topband may be dead during daytime in the US but not here in europe.
I think as they've expanded the AM band down to 1700 for commercial
broadcasters in the US, maybe they should consider offering 1700-1800
for low power (10w) licence exempt hobby broadcasting.
How you'd expect everybody to stick to 10w, I really don't know:-)

Regards

Philip de Cadenet G4ZOW/M

Actually, many modern pirates are convinced that broadcasters (especially
the NAB) is terrified of potential competition by potential legal peanut
whistle broadcasters. Now when you look at a 50,000 watt station and
compare that to a 50 watt station, it's hard to see what the NAB is
worried about, unless it has to do with losing market share to more
innovative but smaller broadcasters. :)

If you've ever taken the time to listen to pirate freqs, you'll find that the vast majority of pirates do exercise common sense and self restraint. But I do admit that hamming seems to attract a subset who just want to spew. If the more responsible hams would crack down on these clowns (it seems that most hams just let them rampage unimpeded) then the FCC might be more open to allowing hams to broadcast. BTW, most pirates play music anyway, although there is a certain subset who want to express unorthodox political/religious views.

VOTES speak loud also. Why let anyone in office if they keep pulling off the same crap? Never ceases to amaze me, people bitch - then vote them right back in.

If need be, Boycott the companies. That is the voice they hear.
I'm not sure this is a good alternative either due to the hardship it may place on the employees, but there HAS to be an answer.

All I am saying basically, is it doesn't matter the party, they are taking away our freedoms a chip at a time, no matter what it is.
Be they Democrat, Republican, etc., vote them out and let yourself be HEARD. But don't blame ALL those of a particular party. ALL of the HIGH RANKING politicians have their own agenda and are getting away with MURDER at our expense. As I said, I too, am Democrat, and I DON'T appreciate their trying to snuff out the right to do the things we've long taken for granted. I ENJOY my scanner and have since I've owned one since they first came out.

Arguing back and forth on here, name calling, finger pointing, and generalizing, solves NOTHING. Why not instead, come up with some workable solutions to the dilemma and THEN post an ad for those here also concerned to get involved and HELP. If people would spend a few moments to call or write their leaders as much as they complain on here, then something MAY be heard and done.

I guess the old adage applies, NEVER take anything for granted.

Well, I'm not saying that everybody would broadcast 24 hours a day, of course. Most people don't have the resources to. And even the big SW broadcasters don't stay on the same freq all the time.

> Amateur Radio isn't about broadcasting... it is a hobby that promotes
> experimentation and public service (for starters), with "broadcasting"
> specifically prohibited for the good of all.

No offense, but that's a joke. Most hams I know use storebought equipment and spend most of their time yakking with other hams about stuff of zero consequence. I know pirates who are more experimentation oriented (in both their equipment and their programming) than a lot of hams. Besides, broadcast stations can serve the public interest too, although most of the big ones don't.

> I don't disagree with everything you have to say, but I don't agree

> broadcasters clean up their own act, and lobby for their own service
> or band instead of stealing parts of other services.

Nobody's taking anything from anybody. This isn't a zero sum game, hams vs broadcasters. An amateur could broadcast and still be a good ham.

What 2m/73cm HT comes closest to including a wide band scanner?
I want a HT that ideally goes from 30mhz to 900mhz (cellular not a problem)
and has at least 10 banks of 10-20 channels each.

I know many will say,"Buy a scanner if you want a scanner".
However, I have a PRO-43 and 2m HT. Would be nice to just
have one handheld to cart to/from my vehicle. I have no
room for in dash unit of any kind.

The new Yaesu VX-1R looks interesting, but no keypad and
only 500mw of power.

Any suggestions on old and new units?

Hi there.

I found a mod for the Realistic HTX-100 which allowes 26-30 MHz, but when I did the mod, it did not work. Here are the details. But first, here's the mod I got:

>Remove bottom cover. With the radio upside down and display facing you remove >the synthesizer board with the four screws, this is near the front of the radio.

>This gives access to the small board underneath with the surface mount >components on it. Locate the processor chip IC401 (UC-1208).Locate pins 28 >and
>29 which are on the right hand side of the chip and are 4th and 5th from the >top. Note they are bridged with solder.
>CAREFULLY cut the copper track NEXT to the pins. DO NOT attempt to >unsolder the two pins form the board. Use a GROUNDED soldering iron. Locate >the two rows
>of connector pins above the chip. On the bottom row locate the last pin on the >right. Verify with a VOM that this
>pin has + five volts. Solder a 10k (1/4 w) resistor between this pin and pins >28 and 29 on IC401.The synthesizer will now tune from 26.00 Mhz to 30 Mhz.

Ok, here's what I did: I found pins 28 and 29 on the IC401 (UC-1208), they were bridged together with solder, as it said. I took a 10k resistor and soldered it between pins 28 and 29 and the last pin on the right lower connecter row. I powered the radio up, and it works as usual. I don't get the expanded range, it just covers 28.000 - 29.699 MHz as it does normally. There was absolutly no change at all. Should I reset the radio after the modification? It seems like nothing changed! I am also looking for the schematic for this radio. If anyone can help with either problem, PLEASE HELP. I would REALLY APRICIATE any ideas that you might have on what may be wrong. Please email me. Thank you very much.

73's,
N3ZVM

I have come by a Transel model swr/watt meter. It is pretty solid,
20-200-2000w, average and peak reading.
I have the manufacturer provided half-page operating instructions sheet,
but was wondering if anyone has a schematic and parts list.
Thanks!

Well, I wish I could agree with the Libertarian party, but so far,
they seem to be a bunch of organized dope smokers and that is about it.

Here it is:

Amendment in the Nature of a Substitute to HR 2369

Offered by Mr. Tauzin of Louisiana

Strike all after the enacting clause and insert the following:

1. SECTION 1. SHORT TITLE.

This Act may be cited as the "Wireless Privacy Enhancement Act of 1997."

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) PROHIBITION ON MODIFICATION--Section 302(b) of the Communications Act of 1934 (47
USC 302(b) is amended by inserting before the period at the end thereof the following: ", or to modify
any such device, equipment, or system in any manner that causes such device, equipment, or system
to fail to comply with such regulations."

(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS - Section 302(d) of such Act
(47 USC 302(d) is amended to read as follows:

"(d) EQUIPMENT AUTHORIZATION REGULATIONS--

"(1) PRIVACY STANDARDS REQUIRED - The Commission shall prescribe
regulation, and review and revise such regulations as necessary in response to
subsequent changes in technology or behavior, denying equipment authorization
(under part 15 of title 47, Code of Federal Regulations, or any other part of that
title) for any scanning receiver that is capable of--

"(A) receiving transmissions in the frequencies that are allocated to
the domestic cellular radio telecommunications service or the

personal communications service;

"(B) readily being altered to receive transmissions in such
frequencies;

"(C) being equipped with decoders that-

"(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service
transmissions to analog voice audio, or

"(ii) convert protected paging service transmissions to
alphanumeric text; or

"(D) being equipped with devices that otherwise decode encrypted
radio transmissions for the purposes of unauthorized interception.

"(2) PRIVACY MEASURES FOR SHARED FREQUENCIES - The Commission shall, with respect to scanning receivers capable of receiving
transmissions in frequencies that are used by commercial mobile services and
that are shared by public safety users, examine methods, and may prescribe
such regulations as may be necessary, to enhance the privacy of users of such
frequencies.

"(3) TAMPERING PREVENTION - In prescribing regulations pursuant to
paragraph (1), the Commission shall consider defining 'cable of readily being
altered' to require scanning receivers to be manufactured in a manner that
effectively precludes alteration of equipment features and functions as necessary
to prevent commerce in devices that may be used unlawfully to intercept or
divulge radio communication.

"(4) WARNING LABELS - In prescribing regulations under paragraph (1), the
Commission shall consider requiring labels on scanning receivers warning of the
prohibitions in Federal law on intentionally intercepting or divulging radio
communications.

"(5) DEFINITIONS--As used in this subsection, the term
'protected' means
secured by an electronic method that is not published or
disclosed except to
authorized users, as further defined by Commission
regulation."

(c) IMPLEMENTING REGULATIONS--Within 90 days after the date of
enactment of
this Act, the Federal Communications Commission shall prescribe
amendments to its
regulations for the purposes of implementing the amendments made by
this section.

SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.

(a) AMENDMENTS--Section 705 of the Communications Act of 1934 (47
USC 605) is
amended--

(1) in the heading of such section, by inserting "INTERCEPTION
OR" after
"UNAUTHORIZED";

(2) in the first sentence of subsection (a), by striking
"Except as authorized by
chapter 119, title 18, United States Code, no person" and
inserting "No person";

(3) in the second sentence of subsection (a)--

(A) by inserting "intentionally" before "intercept"' and

(B) by striking "and divulge" and inserting "or divulge";

(4) by striking the last sentence of subsection (a) and
inserting the following:
"Nothing in this subsection prohibits an interception or
disclosure of a
communication as authorized by chapter 119 of title 18, United
States Code.";

(5) in subsection (e)(1)--

(A) by striking "fined not more than $2,000 or"; and

(B) by inserting "pr fined under title 18, United States
Code," after
"6 months,"; and

(6) in subsection (e)(3), by striking "any violation" and
inserting "any receipt,
interception, divulgence, publication, or utilization or any
communication in
violation"; and

(7) in subsection (e)(4), by striking "any other activity
prohibited by subsection
(a)" and inserting "any receipt, interception, divulgence,
publication, or
utilization of any communication in violation of subsection
(a)".

(b) RESPONSIBILITY FOR ENFORCEMENT--Notwithstanding any other
investigative or
enforcement activities of any other Federal agency, the Federal
Communications Commission shall
investigate alleged violations of section 705 of the Communications Act
of 1934 (47 USC 605) and
may proceed to initiate action under section 503 of such Act (47 USC
503) to impose forfeiture
penalties with respect to such violation upon conclusion of the
Commission's investigation.

Go to Part 47 of the U.S. Code, Section 302 and to see how Section 2
applies to
scanning receivers if amended.

Go to Section 705 of the Communications Act of 1934 to see how the
proposed
amendments to Section 3 will affect the radio hob

I am also a member of the ARRL, although I do not like their viewpoints
lately, and WELCOME a message such as the one posted giving me an
alternative group to join that may have issues more in the direction of
myself. I don't think wording it any other way would have got the point
accross that I indeed understood.

Just like George Washington and Thomas Jefferson. If your refering to
the single issue (out of many others) of RE-legalizing Marijuana, did
you know that at one time in this country, many farmers were REQUIRED to

grow it! It was much needed in producing ropes for ships, as well as material for clothes. And lots of people smoked it as well, no worse than having an alcoholic beverage today. I'm sure during prohibition of alcohol, there were those like you that would have been against any party that wanted to RE-legalize alcohol, thinking that it was ALWAYS illegal, just as most do not remember NOW that Marijuana and other drugs were not always illegal as they have been in the last few decades.

I resisted Windows 95 at work for a while but was forced into it by the need for new 32 bit software. Now that I use it I find I have less problems overall than I did with Windows 3.1. I even have one DOS application that is a memory hog and won't run on a laptop under DOS (insufficient memory with all the PCMCIA drivers and such loaded) but it will run in a DOS window under Windows 95.

Don't feel too bad, you have lots of company. Burt Fisher and Jeffery Herman, to name just a couple of em'. Compulsive posting is often the result when the sheer boredom of life causes a person to spend all of their time reading newsgroups. The analogy to a junkie is striking.
The OFF switch is so close, yet so far. Reach out to it, save yourself. Shut that sucker off and go outside. Today is the first day of the rest of your life.

"Each day is like a crisp new dollar bill. How are you going to spend it?"

After receiving many requests for faxes, emails, copies, etc. of articles, I have
finally dragged myself into the late 90's and posted them to a webpage.
So if anybody is interested, you can find "A Complete DSP Design Example Using FIR Filters", as well as a new one entitled "Modern Digital Design for the Radio Amateur" at http://members.aol.com/johnw39038/index.htm
Look for John's page...

Well, there was a four year old Korean boy who spoke four languages fluently, I suppose we should expect high school students to do the same? My point was that we all have different levels of learning ability, and clearly you didn't get my point.

No it's not, it's 10 K bucks and jail time is virtually non-existant.
Most of the time it's a letter saying cut it out. Most do, and that's
it. On the 2nd offense, it's another letter and a visit to say "
cut it out". 3rd time's a real charmer...a letter, a visit, all
equipment taken and a court date with the Federal Magistrate, fine and
that's that. 4th time...oh boy.

> response.

When I took my General exam many moons ago, it
was at the FCC office in St. Paul. The receive
test was 5 minutes long. To pass, you had to
copy one minute straight perfectly, on paper,
otherwise you failed. You also had to pass a
sending test. When I took my Extra exam - also
at the FCC office, it was a comprehensive exam.
They still sent 5 minutes of text, but it was of
a typical QSO (QTH is, antenna is, etc). You then
took a comprehensive exam that was 10 questions long. It
tested you on content - you didn't have to write
down a single character if you could copy and retain
it all in your head. There was NO sending test though.
The comprehensive test was MUCH easier and you only
needed 70 or 75 percent to pass. I believe
the VE's (volunteer examiners and not our neighbor's
to the north) use the same thing. Judging by some of
the quality of the CW on the bands, a sending test is
probably not required either. So, to the No-Code crowd,
it is easier to pass the CW portion exam now that it
ever has been. I never thought much of CW either when
I was first licensed, but it is all I use now. Why -
'cause I have to interest in the digital modes - others
do and that is fine.

>It would be possible to create a station that was actually outside the
>limits while was inside the presumptive evaulation power limit;
>however, they categorically exempted mobiles on the theory that the
>victims will be transitory. . .

Even a 50.0 watt station, which is categorically exempt from evaluation on any band, could exceed the maximum permissible exposure (MPE) limits if its antenna was located very close to people. There is actually some Catch 22 language in the rules that could require the station licensee to do an evaluation anyway, if the FCC had reason to believe that the MPE limits were being exceeded.

The clarifying langauage about possible exemptions to the categorical exmeptions is especially clear wrt mobile operation. This is to help define the balance between the transistory nature of the exposure (due to the fact that a mobile is mobile and the fact that most mobile operation is push-to-talk and uses a low operating duty cycle for on/off times.

The upcoming "Supplement B" to "Bulletin 65" for Amateur Radio will have some language that helps hams understand when it is advisable to do a station evaluation when one is otherwise exempt. At this stage, these "unusual" evaluations are not *epecifically* required under the rules, but are more or less in the voluntary compliance area.

, so only a non-QRO Sat/EME station is likely
>to have a dangerous EIRP at low enough power to not require an eval.
>And you're legally required to be safe even if you didn't have to do
>the eval so if in doubt, eval. All that station would have to do to
>show compliance is that it's aiming at the little leos and not the
>neighbors.

The January issue of QST will have a long article wrapping this up, based on the content of Supplement B. See also the ARRL Web page, http://www.arrl.org/news/rfsafety/ that reprints the January 1997 and October 1997 articles on the subject. Supplement B is going to be released any hour now, probably as early as today, Nov 15. As soon as the January article is sent to the printer, I will pre-publish it on the ARRL Web page.

>Ed W1RFI correctly notes the history that the FCC originally had a flat
>50W triger level for evaluation, which (a) was a gift in itself, in
>that no other service has *any* exempt power level . . .

Actually, some of the other services have some categorical exemptions
based on EIRP and antenna separation. The amateur repeater exemption of
500 W ERP (uses a dBd reference instead of dBi) is modeled after the
other exemptions.

>and (b) was
>adjusted upwards at the request of the ARRL by proportion to the numbers
>in the ANSI/IEEE biohazard standards that the FCC has adopted.
>And no, I'm not taking the ARRL's word for this; I downloaded the
>official docs from the the FCC FTP/WWW sites, . . .

I have worked too hard on this whole topic since August of 1996 to want
to "spin" anything. Not only do they not pay me enough to lie, in this
case, I just don't have the time. :-)

>(Yes Ed, I know SM's have no voice unless the Director chooses to

Hello!

I currently operate a repeater network here in New Brunswick, Canada that is linked to the Internet using Iphone & RptrLink. What I looking to do is set-up a 24 x 7 link with another repeater(s) on the net using either the exisiting Iphone software or MS NetMeeting. If anyone is interested in experimenting with this, please e-mail me.

Regards,

Don Trynor

Gag,
Unless the most hopeless of yuppie wannabes will even waste their money on a laptop, Or the Marketing people who get pampered with all the little trinkets they want but don't need.

BTW, the only programs I have seen that would totally screw up under DOS used Pharr-Lapp DOS extenders. Almost all of my DOSware and w3.1 stuff is adequate to task. The only reason I have for using 95 or NT is because I am forced into it by clients that have been suckered into using it corporately because they just had to have the latest $5,000.00 CAD package or something.

This was a fun post, but one thing you forgot to mention was that there were two versions of the Invader.

At least according to an ad (I was barely born when it came out),the $619.50 had 200W PEP input. But there was also the Invader-2000, selling for $1229.00, which 2000w PEP input. Power input seems to be the only difference.

And you could get a kit that upgraded the Invader to an Invader-2000 for only $619.50.

This was in the May 1961 issue of QST. I just had this issue handy, and have not made a point of checking to try to see exactly when it was first advertised. I don't have a complete set from back then, anyway.

As for when the S-Line was released, the November 1958 issue of CQ has a four page color insert titled "Introducing Collins S/ line of SSB Amateur Equipment". COnsidering the splashiness, it makes sense that that would have been the first ad, though again I haven't made a point of searching issue by issue before that.

hello there,
Yes yes, it's the wrong newsgroup, but please hear me out before you start to write someting.
I'm an animation student and I am writing a paper on "adults and animation". At the moment I am trying to do some research and that's why I need your answer on these small questions.
Please e-mail me the answer because this message was posted to really a lot of newsgroups. You will find my e-mail adress at the bottom of the page.
Thank you very much for answering, and please don't even think about sending me something else than the answers, I won't take the time to read it anyway.
Brecht Cuppens

1 Which factors do you find most important in an animated movie, series, short,.....(choose three and rate, 1 being the most important, 3 the least)

1humor
2story
3visual style
4music
5Technique (3-d, cells, computer...)
6atmosphere (dark, heavy, comic, weird,....)
7dialogue
8quality of animation
9"adult content"(violence, sex, drugs,...)
10suspence
11realism
12subjects
13other (fill in)

2Which is your favourite animated movie, series, short,.....(only one please) and why?(choose from the above list)

3some personal info: age, sex , education, country

My answer would look like this:
1visual style
2storie
3humor
The Nightmare before christmas: visual style, quality of animation
20/m/university equal education(not finished yet)/Belgium

This shouldn't take too long and I kept it as short as I could,
so if you feel like it, you know what to do
thanks
Rene.Cuppens@ping.be

No, I'll bet he actually thinks that cranking the output power from 210W to 240W will give him a "bodacious", "big talkin'" signal. (I assume that this is the real 1000 and not the MP) Even with the little MP, what difference does an extra couple of dozen watts make compared to the increased stress on the radio?

This hobby really is turning into CB (I would tell everyone to sell out now but let me do it quietly first while these radios still have value)

I've been around RF all my life also, and I have stunningly bad taste in women (two ex-wives so far). You may have seen the JPEG posted of that fat chick with a refrigerator strapped to her face - that was my second wife. Could that be due to RF exposure?

> > There must be a pattern here.

I think that the pattern here is that in the world, roughly 200,000 people die every day. Figure it out yourself. Five billion people, 75-year (or less) average life span. Of those 200,000 daily dead, or four stadium-fulls of people, how many do you think you might have known (or even heard of)? Quite a few, no doubt. Before there were radios, even one century ago, the average life expectancy of humans was between 28 and 55 years, depending on various factors. Does that man that radio has added 20 to 40 years to the average human life? Can I have yours, if you aren't going to use it?

My elmer Fred WB6*** (callsign omitted because he was in the CIA) is long since gone also. He may have had an on-the-job injury. I think he was blown up.

> > 1. Can you deny that many of our radio pioneers are dead?
> > Every QST magazine brings news of another "SK"

That's true. But there are more hams now than there used to be, and since being a ham operator does not grant immortality (I'm thinkful for that every time I see a Burt Fisher posting), hams will die just like anyone else.

> > 2. I personally have made a survey of all my old Novice

I think that the only carrier they should worry about is you! The common thread seems to be that every one you come in contact with gets diseased. Have you taken a shower lately? Geez.

That area is still filled with older cordless phones, but they aren't sold
anymore, so that should be a declining usage. That'll eventually leave
that segment vacant. Maybe you have found a new use for it. (I know
hams would rather have it as an expansion of 160m, but we aren't
filling what we've got now, so it would be hard to justify increasing
160m by 50%.)

I have had an alinco dj580 since 93 use it everyday..have drpped it
chiiped case..unprogramed computer so many times i lost caount..dropped
in the lake..opened it up and dried it out for 24 hours then 1 hour in
over @100 deg..dog buried it...its like a timex takes a licking an keeps
on ticking..like i said everyday ise like a telphone since apr 93

NO SWEAT..almost as good as my icom hf rig..but that is a whole nother
story on a diferent reflector

Drake TR-7/R-7 System For Sale. Includes:

TR-7 Transceiver with NB-7 Noise Blanker, Fan, WARC Band Capability,
500 Hz and 1.8 KHz Filters. Modified by Drake with surge
protection and other updates. Covers all ham bands 160 to 10
and has general coverage receive from 100 KHz to 30 MHz.
200 Watts Transmit Power

PS-7 Heavy duty power supply for TR-7

RV-7 Remote VFO for TR-7

SP-7 Speech Processor for TR-7 (also has phone patch and tape
recorder inputs)

Matching Drake Desk Mike(7077) for TR-7

R-7 Receiver with NB-7 Noise Blanker, 500 Hz and 1.8KHz Filters.
Also wide filter for AM. Covers from 100 KHz to 30 MHz.

Matching Speaker (Matches TR-7 and R-7)

Cables for connecting TR-7 and R-7 as system

Service Kit for TR-7 (could probably be used for R-7 also - not sure)
includes board extenders, tuning tools, etc.

Operating manuals and Service Manuals for both the TR-7 and R-7

Prefer to sell as system only. Asking $1000.00 for whole system.

Shipping and Insurance NOT included in price.

Contact John WB3ICL 5-9 PM EST at 410-987-5288
or email to jackwy@clark.net

FCC Enacts Internet Morse Code Requirement
--- ------ -------- ----- ---- -----------

The FCC, under pressure to clean up the Internet, especially after the
Communications Decency Act provisions regarding Internet content
regulation were stricken as violating the U.S. Constitution, has
decided instead to require a Morse code requirement for Internet
users. Citing the success of the Amateur Radio Service and the general
belief that its requirement for operators to pass a Morse code
proficiency exam and other technical requirements, has kept the A.R.S.
"clean", the FCC will enact a 5 word-per-minute requirement for all
Internet users. They are leaving open the issue of whether there
should be a "codeless" class of Internet user and are soliciting
comments on this proposal.

Persons wishing to develop a web site having only links to other web
sites having links to other web sites, and so forth, must pass a 13
word-per-minute test and demonstrate proficiency in HTML, the Internet
authoring language.

Persons wishing to develop web sites that have actual content, as
compared to just links to other web sites, must pass a 20
word-per-minute Morse proficiency test, demonstrate proficiency in
HTML and the Java programming language, and show that they have
mastery of at least one human language, such as English.

The FCC, which lacks budgetary authority to implement the testing
program, has stated that it intends to create Volunteer Examiner
programs for Internet applicants.

This is nonsence....How old is the average Ham......at least they make better than average life span for a man......most of these old buzzards are 70 or better........if RF was a killer I would have been dead years ago.......the engineer that I learned radio from died at 72.........I hope I make 72 and go quick like he did.........The fact of the matter is most of the friends I lost over the years have passed away from other causes.......I think its the over weight , cigerette smokers, with high blood pressure and a rotten diet of burgers and fries for the last 30 years that is killing most of them.....And I know about that.......being overweight and with high blood pressure had done more damage than the RF exposure could ever do.......aside from placing your head into a tank circuit I think that most of us will pass away for the above problems I mentioned rather than RF burns

As nice a person as Johnny Johnson may be, nobody elected him to speak
for AR. The Johnsons and the Walkers, etc, with their (appointment to the job)
views of what AR should be. Vic Clark was ELECTED by a board which was
elected by the membership. Thus, Clark's view (we could imagine) was more
representative of the members. We can choose, or not choose, to be members
of the ARRL. However, we are stuck with whatever the temporary holder of
some government "civil servant" feels is right or wrong. Which the next
apointee will possibly reverse. I'll take the ARRL system myself.

With cordless phones, as with any old technology, people will junk the old
to get the new. Maybe in 40 years people will collect those old cell
phones, but it's not something we should worry about now. The idea of
setting aside 1700-1800 as a micropower broadcast band is the best I've
heard yet, and it has several advantages.

*It's right next to the existing AM broacast band-no major retooling of
general coverage recievers would be needed.

*It has local coverage.

With the Dunifer case going against the FCC, this is a great idea for
hobby broadcasting. Even Dunifer doesn't deny the FCC's right to license
broadcasters; maybe these new hobby broadcasters could be licensed as
hams, with ham callsigns, and under a revised legal code for hams. I know
that some pirates will whine about losing stereo capability with FM, but
FM is way too crowded as it is. In fact, I'll post this to

alt.radio.pirate and see what response I get there.

3101. Alinco DJ-100

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-18 00:00:00 UTC
From: anon1ec1@nyx.net
Message-ID: <64tiul$3pf$1@nyx10.nyx.net>
Source record: 186390

Hello all,

I am looking for a battery pack (good or bad) or an empty battery case for the Alinco DJ-100 HT. I need a pack that has the built in dc/dc converter or an empty case so that I can make one myself. I'm trying to set this rig up so that I can use my cigarette lighter plug for power while I'm mobile. The pack that I have for the radio is a 160 mah pack with no accessory plug, so this limits me to about 1 hour of talk time before needing a recharge.

The packs for the DJ-120 and DJ-500 series radios will also work.

If anyone has one of these they would be willing to part with or any information about where I could get one, I would really appreciate it.

Thanks in advance!
-Glenn

Thanks. Good thoughtful sort of thing in your posting. Altogether too many PLOTS! out there. The real
problem with the scanner grabbers may indeed be the spectrum resellers (cellphone, etc..) who want to
tell their customers that no one will be able to listen to their analog conversations. If you recall the FCC auctions of this type of spectrum, the resellers also have Huge Money to spend on political pimping.It's not about rights, right or left, integrity or its lack. It about reelection money. too bad.
Take care.
John

Get a form 610, make the change of address modifications, and attach a
letter explaining that your original license document was lost. Mail it to
Gettysburg. The FCC will send you a new one with the modifications.

I recently had a phone repairman in my apartment and we began talking about grounds. He said that using the electrical ground of a 3 prong plug (not the neutral ground) would give good grounding for RF. This is not what I have believed up till now. Would this be advisable for amall QRP rigs with indoor antennas if you knew the ground worked?

To obtain a new copy of your license, simply send a letter to the
FCC in Gettysburg and ask for one. Tell them (in brief terms) that
you lost the previous copy.

To update their records on your address, you need to send them a
new Form 610. Check with your local VEC's for a blank form, or
check out the FCC web site - they may have one you can print out
from the web. (http://www.fcc.gov)

Tim, I do not believe that war is the answer to the problems we are
having with Saddam. I also do not trust a draft dogging, dope smoking,
gay loving, womanizer to lead us into war! His ability to think is not
very clear and he often avoids responsibility by calling in the evil
united ugly nations!
How wonderful it will be to see a draft doggers who went to the USSR
to protest against the USA lead our citizens off into war to die.
What a joke!

SB QST @ ARL $ARLB069
ARLB069 Section Manager Election Results

ZCZC AG69
QST de W1AW
ARRL Bulletin 69 ARLB069
From ARRL Headquarters
Newington CT November 18, 1997
To all radio amateurs

SB QST ARL ARLB069
ARLB069 Section Manager Election Results

Ballots have been counted in the Section Manager election for the
West Texas Section. The term of office begins January 1, 1998.

The results are as follows:

In the West Texas Section -
Ted G. Harwood, KB5VWC, 44 votes
Fred L. Marble, Jr., W6VPI, 53 votes
Charles C. Royall, WD5CJI, 84 votes
Royall was declared elected

Seven other Sections were not contested.
The following were declared elected.

In the Delaware Section -
Randall Carlson, WB0JJX

In the East Bay Section -
Bob Vallio, W6RGG

In the Michigan Section -
Richard Mondro, WA4FQT

In the New Mexico Section -
Joe Knight, W5PDY

In the Santa Barbara Section -
Robert Griffin, K6YR

In the Tennessee Section -
O.D. Keaton, WA4GLS

In the Western Massachusetts Section -
William Voedisch, Jr., W1UD

Since no petitions were received for the Alabama, Alaska, and Kansas
section manager elections by the deadline of September 5, 1997,
nominating petitions will be resolicited in January QST.

3110. What people just don't understand..

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-18 00:00:00 UTC
From: Vincent Biancomano <103520.355@CompuServe.COM>
Message-ID: <Om$Jr0F98GA.235@ntawwabp.compuserve.com>
Source record: 186399

In reply to "norights,"
If Gary Coffman demonstrated anything in his last post, it's that he made a great effort to sound authoritative, but never knew the first thing about Incentive Licensing. If he did, he would know that Docket 15928 (Incentive Licensing) had to do with increasing technical competence; not increased Morse speeds, which was just a byproduct of the effort to increase that technical competence on a person's way to meeting existing Extra Class morse requirements. All one needs to do to realize this is to read Docket 15928. The crux of that Docket was actually published in QST in the mid 60s, and so is easy enough to secure. He should have been more careful in his crash course in learning.

What he showed from his last post is that he never read Docket 15928 and wasn't generally acquainted with the documentation concerning the history except from what he picked up on rumor. He heard the rumors, they sounded reasonable, and so he believes he's an expert. That attitude is even more evident since his take on Incentive Licensing didn't cite any hard historical references, and he never knew any of the principals (people) involved. So it was he who was interested in rewriting history. That's quite a risk, and a pretty fatal screw-up now that he's been caught on being unawares of even the fundamental purpose of Docket 15928. Indeed, he was stuffed at square 1.

"Very untidy, Mr. Bishop!" (Frank deKova, The Mechanic).

Shooting the "Morse Code" bull is nice, but if one wants to slay that bull, no-coders will have to invent another tack. Because now, in a sense, the "bull" is all over them.

Regards,
Vince, WB2EZG

What kind of crazy notion is this? Think for yourself?.....you gotta be kidding.

Every newsgroup is filled with ridiculous questions from people who will not lift a finger and will ask the most basic questions where the answer is painfully obvious to even the most casual observer.

That's America! You can expect more of this as the decades roll on!

God, what passes for logic to you, Dick? Doesn't the
well-documented fact that Morse is essentially NEVER used
for emergency/disaster communications even register with
you?

You are a perfect example of one who refuses to include
facts as a component of his decision-making process.
Amazing.

[I've removed rra.antenna and added .policy, follow-up-to: .policy]

Ed,

You replied to me,

> I have worked too hard on this whole topic since August of 1996 to want
> to "spin" anything. Not only do they not pay me enough to lie, in this
> case, I just don't have the time. :-)

I don't think you're thinking I said you'd spin anything, but I'm going to reply publicly just so the others know that.

I know you're hard working and play straight -- there /are/ some from both flanks of the Code debate -- and older debates! -- who suspect /everyone/ in the ARRL, Directors, Newington & the Field, of being spin doctors; and there are others like myself who consider the individual cases.

Although there are spin-doctors in Newington, they're not in Technical. I've certainly seen some spin-doctoring on the CW-forever, "serving the core membership" while "reaching out to the new hams", and the Little-LEO and other accomplishments in Washington. You and Zack in technical are straight shooters, and I'll presume the same of other HQ staffers outside the Directors / Secretary staff. The Technical and Field departments have always been helpful, courteous, and truthful to me and anyone I know. The same can not be said of the Elected Officers and their appointed Staff; it would be inappropriate to go into detailed he said / she said recapitulations here, but I think we can all smell the difference between technical and political writings.

My comments were to butress your replies, to point out that a dispassionate analysis would show that even if one discounts as marketing fluff or spin-doctoring the ARRL taking credit for it in QST and the ARRL Letter, it was, indeed, it was an improvement and to their credit, demonstrable from the FCC filings. (I *know* there are some rather more rabid than myself who assume anything signed by anyone@arrl.org must be agit-prop, and it was to them my remarks were addressed; there are also some others who think it should be so: I remember a loyal member (with no specific authority) telling Bill Sohl he should resign his Field Appointments if he publicly disagreed with a position of the Board of Directors.)

(The Challenger Commission [Ride/Feynman] documented that when an Engineer is paid enough to spin things, s/he's called a Manager -- although sometimes they're called Marketing, or even Pre-Sales

Technical Support if their price is too cheap :-)

You are invited to visit the Sunbelt Hamfest, a new service for Amateur Operators. All who have listed equipment in the Bone Yard have reported great, fast results. We are being visited more every day.

If you have equipment to sell, or items you are looking for, send us the list by email. Turn that excess equip. into Christmas money.

No up front cost, we only ask if it helps you move your gear to send us $10.00 for the full month once you move an item. You can continue to move the other at no extra cost. We are easy to work with.

Photo's of your equipment can also be posted showing what the equipment looks like. (usually a photo from the manual.)

Visit us at http://www.surfsouth.com/~wharrell/fest

We look forward to hearing from you soon.

73 God Bless

FOR SALE

CCR708A at US, or AX700 at Japan

VHF-UHF wide-band receiver
* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Microprocessor controlled
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

This unit is one years old with little usage and in very good condition

I hear what you are saying, but how do you account for the fact that
it was Bill CLinton and a Congress owned by Democrats in 1993 who passed
the Brady Bill, the assualt weapons ban, the radar detector ban in
trucks, etc. etc. And, do not forget that since he has been in office,
Clinton, Bruce Babbit, and EPA head, Carol Browner, have done all they
can to chip away at your property rights! Now the damn EPA is about to
outlaw the usage of your backyard grill, your fireplace, some if not all
gasoline powered lawn equpt, new and heavy taxes on your vehicles, etc.
All done under Comrad Clintons new clean air rules from the EPA.
We had better wake up in America and quick! Soon, we will live in a
socialized country with an all mighty government controlling your every
move! But few seem to care as long as they have money in the bank, they
look the other way instead of marching in the streets.

Broadcasting was prohibited in the late 30's, at the same time modulated
oscillitors were ruled out on 5 meters.

Well Dave, I can tell you that the attitude is nothing new. Once
federal seizure laws started allowing law enforcement agencies to
seize property purchased with drug money, all the lawyers started
to advise their drug-dealing clients to lease, rather than buy,
that shiney new BMW.

Don't blame the FCC for hams being boring. There a many interesting
things to talkl about. most choose not to. It's there own fault.

> >

Music QSO's still happen fairly regularly on the 75 meter band and
sometimes on 160. This has been going on since the early 70's. There
was a regular pirate station on 75 meters in the mid-70's, WBLO.

Many ham stations are still as well equiped as small broadcast
stations. There are at least 10 hams utilizing commercial AM broadcast
transmitters on 160 meters, on the east coast, and several others on the
west coast. The TX and and ancillary equipment is usually as good as,
or better than your typical 1kW or less, small town radio station.

No. The 160 meter band is 1800-2000 kHz. The expanded AM band ends at
1700.

I would like to know how the Leonids shower was for you this year on 10 meters. Did you hear many stations or did you complete any skeds ? I have been keeping data for two years now on 10 meters (this will be the third). Let me know what you thought aout this shower. I am always looking for skeds on 10 meters during showers or on randoms. Reply y e-mail.

METEOR SCATTER DATA FOR DEC.

5-p 6-p 9-P 10-P 11-P 13/14- vg 22-F 24-P

The above dates represnt days when skeds are recomended and are days which should better than random meteors.

P= poor F = Fair and G = Good

Rememer, the ONLY expert only expert on meteor scatter is Mother Nature !

Yes ....

I'm using Windoze 3.11 at home , my os is Linux but sometimes I have to do some
work on DO$ and Windows so I use the less buggy soft from Micro$oft .
The PC is Pentium @100 Mhz ....

So W95 is not the best soft ever ... but the worst ever ....

You want to make real soft .... do it on a real OS , try Linux !!!!!!!!

> Nothing, right? Probably not a damn thing.

I continue to listen to any frequency I want to and if and when this bill passes I'll continue to do the same. Whats the problem? You can build equipment to listen to any part of the spectrum you wish. How exactly will this bill effect your listening habits?

I am probably one of the few people on Taiwan that has purchased a new copy of Win 3.1 (Chinese) in the last few months. I saw a new CD-ROM in a computer store and bought it as my old installation disks are getting a little questionable. Maybe you can read from my header that I am using Netscape 2.02 running under OS/2

Best regards,

Art Borg

The professionals you talked to probably *couldn't* climb a BC tower even
if it were cold. :-)

But tower workers do it routinely. Stations don't go off the air just to change
a beacon lamp. Of course they're probably technically in violation today unless
the tower worker is wearing a protective suit, but they certainly do it anyway.
Tower workers tell me the suits are so hot and clumsy to wear that they'd rather
just put up with the [mild] RF heating. Tower workers have been scrambling up
hot towers since the first one was erected. The only ones I've ever heard of
being fried were those who attempted to step directly between the tower and
ground.

I'm not saying that what they do is perfectly safe (or even sane, some of these
fellows strike me as having a flying squirrel in their family tree), but I would
suggest that falls are the primary danger that they face, and not RF exposure.

CCR708A in US, or AX 700 in JAPAN

VHF-UHF wide-band receiver
* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Microprocessor controlled
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

this is one years old unit with little usage

FOR SALE

CCR708A in US, or AX 700 in JAPAN

VHF-UHF wide-band receiver
* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Microprocessor controlled
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

this is one years old unit with little usage

Steve,
Two points.
The spectrum is NOT shrinking, note the introduction of yet more bands to us amateur radio operators in recent years. Here in the UK we now have, on top of the WARC bands, 73 KHz, they are also talking about another LF band, I believe around 150 KHz. Several bands on HF where amateurs were 'secondary' users are now primary and power levels have been improved. For example most HF marine operators if not able to use VHF now have Satcom thereby freeing up HF space.
In the last couple of years we've also had out 'goodbuddy' band increased to 80 CH's.
>It isn't as though Amateurs are "holding" frequencies that COULD be
>better used by legal "broadcasters". Let the pirate and illegal
>broadcasters clean up their own act, and lobby for their own service
>or band instead of stealing parts of other services.
IMO this will be a never ending uphill battle due to the fact that the fat cat broadcasters in your country, ie, the NAB 'control' the fed's, senate et al.
Your country is nearly as UN-democratic as ours.
We still don't have a FOIA!

Spectrum can apparently shrink in many ways... you can lose
frequencies, have to share them with other services OR you can pack
more people on the same frequencies. If you allow Amateurs to
broadcast, that is CERTAINLY another form of spectrum shrinkage as it
also removes usable spectrum from the shared pool.

The discussion's title was HF, so I didn't count LF (which most
Amateur gear can't do anyway... which was the OTHER point in the
title).

Regardless of whether U.S. or worldwide, Amateur Radio is supposed to
be a legal and licensed endeavour. Pirate or illegal broadcasters are
not, and simply take what they want with no regard to commonly held
standards of behavior. It is simply an attempt at anarchy. If they
want it so bad, let them BUY spectrum like everyone else! <insert
biggest tongue-in-cheek grin here>

Yes, the U.S. Government can be purchased at the right price... what else is new (we learned it from all the other corrupt and oppressive countries around the world that our citizenry is made up of). It just took us a bit longer to get there and it is much bigger is scope (so it is a bigger target of discussion).

IMHO

Tim:

You can find out your original issue date by contacting ITS. Here is
their information:

"The International Transcription Service (ITS, Inc) became the FCC's
duplicating contractor in 1993. Among other things, they research
amateur
call signs to determine when they were first issued and to whom.

Prices vary depending on the volume and research time involved in each
project. Research time is $12.00 per hour ($25 minimum) with increments
of
quarter hour time periods. Regular requests take anywhere from 3-5 days.
Additional charges apply for expedited service.

ITS, Inc is located in the FCC Gettysburg Office. Their complete address
is:
ITS, Inc
1270 Fairfield Road, Ste 24
Gettysburg, PA 17325-7245

They have a 24 hour FAX service at 717-337-3409

If you have any questions ITS, Inc. can be reached at 717-337-1433."

Let's see...the oldest reference I have on this is more than
30 years old. I think the book I have is about 45 years old now,
and was the result of writing done during WWII. I can imagine
it was pretty well known before that. It just points out the
need to be very careful about what physical significance you
place on SWR. ;-)

(I posted some more detailed technical comments about this a
few months ago, but nobody seemed to care, which is fine.)

> Heh. As good a jab as I've read in this group in a couple of weeks. :)

LOL. I liked that one too. :-)

But when will QSLs become electronic? A one-time key, Password protected and encrypted QSL verification! Then the QSL could be sent by any means required or available such as internet, packet, CW, or phone. A QSL bureau web site could handle the entire transaction, and the recipients could instantly verify and print if they like, or just leave it in memory at the bureau.

We would then exchange "QSL information" by simply sending a unique password serial number during the QSO.

Maybe someone's already cooked this scheme before. But it's worth heating up again.

Does it matter where on the tower the ladder is located? If the ladder is *inside* the tower structure, is there any RF field there? Or does the tower act as a giant Faraday cage in that case?

I once talked to a technician at a LORAN station who had climbed the antenna tower live. He seemed to be saying that as long as you kept your body inside the tower, there were no noticeable effects. On the other hand, if you stick your arm outside of the tower structure, it would become part of the radiator.

In any case, he seemed more worried about X-rays generated by the anodes of the transmitter tubes than RF exposure.

3171. FS: Dual Band Mobile & Portable

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-19 00:00:00 UTC
From: No Spam Please <onoiml8@bigfoot.com>
Message-ID: <6504pf$490$1@whitecliff.sierra.net>
Source record: 186290

FOR SALE:

Standard C5608DA Twin Band Mobile
VHF 5/10/50 Watts
UHF 5/10/40 Watts
Extended transmit and receive: Works well on MARS/CAP as well as commercial VHF and UHF frequencies.
Capable of AM on VHF aircraft band
Crossband Repeat
Remote control microphone with display: Radio can be trunk mounted!
CTCSS
DTMF including DTMF paging
Includes Diamond MX-72D duplexer to allow the use of a single dual band antenna
Includes Larson 2/70 mobile antenna and NMO mount kit
Operators and Service Manuals included
$450 O.B.O. price includes USPS shipping to any US location

ALSO:

Heath HW24HT Dual Band Portable
This radio was mfg by Standard Amateur Radio and was not a kit
VHF 250 mW/5 W
UHF 250 mW/4 W
DTMF
CTCSS
Alkaline Battery Pack
3 NiCad battery packs that need to be rebuilt, with wall (slow) charger and desk (rapid) charger
Extended transmit and receive: Works well on MARS/CAP as well as commercial VHF and UHF frequencies.
Operators and Service Manuals included
$250 O.B.O. price includes USPS shipping to any US location

These radios were owned and maintained by an amateur radio operator who is also a commercial wireless technician. These radios are very clean and meet or, in many cases, exceed the manufacturers specs.

I really need the cash but might consider trade for Amateur HF gear or Commercial VHF/UHF/Microwave gear.

Direct your questions or offers to:

I'm not sure that is a good analogy. The cellphone wristwatch
is not far away.

While negative standing wave ratio has little or no real
meaning, if you computed SWR based on reflection coefficients
(1 + gamma / 1 - gamma), you do achieve a negative SWR for
negative resistances. I guess it could happen. However, I
don't know why you would want to look at it in terms of SWR.

3174. Re: MARS/CAP mod for Alinco DJ-S11T

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-19 00:00:00 UTC
From: Trent Drenon <tdrenon@telis.org>
Message-ID: <64vuml$em9$1@mentor.telis.org>
Source record: 186293

I found this on dejanews.
Good Luck! Trent
You need to remove a TINY resistor. Though the following mod is for the
DJ-S41, it works just fine on the DJ-S11. RX will be approx: 137-173 MHz
(off the top of my head, don't have the radio on me now). BTW I am
forwarding what was sent to me and accept no responsibility for what you
do to your own radio.Here's the mod:
Subject: EXPANDED RX / TX MOD FOR ALINCO DJ-S41
Performing this modification will void any warranties.
All standard disclaimers apply. This mod is for the
DJ-S41T, and not the DJ-S41(C) 10 mW version.
1. Place the radio face down on a soft towel. This avoids
scratching the display and gives you a place to put
the seven tiny screws to be removed. 2. Remove the batteries.
3. Remove the three screws on the upper rear cover, and
the four screws inside the battery compartment. The
rear cover can be lifted and removed easily, as there
are no wires to be concerned about. The antenna
connection is made by means of a gold-plated spring contact.
4. Look for a small (about 1 mm) green surface mount
resistor (actually a 0 ohm jumper), located on the far
left side of the exposed circuit board, located to the
"northwest" of the speaker. There is a marking in white
letters, OP/CL, this resistor is over the top of the "P".
It is the only green component visible on the board.
(This radio does not have the traditional Alinco red
and blue wires which have become so familiar...)
5. Carefully remove this resistor, using a small tip soldering
iron, tweezers and a steady hand.
6. Re-assemble the radio, being careful that the thin rubber
gasket is seated around the inside edge of the rear cover.
Replace the batteries, press and hold the "F" button on the
left side of the radio, and turn it on. The display should
show all segments and markings. Release the "F" button and
the radio will now be capable of operating from approximately
425 MHz to above 470 MHz, depending on the VCO's tuning.
The display will blink if the VCO is taken out of its range.
Re-tweeking of the VCO is not recommended.
7. Although reception on the expanded frequencies is legal,
transmission is not. This unit is not FCC type-accepted
for anything but ham band (425 - 440.995 MHz) operation.

The signs are probably the result of the new FCC regulations related
to RF safety and the radio stations concerns regarding liability.

How did you get a license without knowing this?! Go read your rule book or study guide! Broadcasting to the general public is ILLEGAL on frequencies reserved for Amateur Radio! I wouldn't post your call sign if I were you (if it it really is yours) as you certified that you know all the rules and regulations when you apply and receive your Ham license. The FCC could investigate if you are who you say you are, and take your license away from you for making the statement you did, as it shows that you do not know the rules and regulations and could be operating illegaly.

I second that. All those in favor?

Hey - if morse code is so bad, so tough to learn, so out dated and so completely useless, as many no coders continuously whine, why do I see the majority of qsl cards for CW qsos? I presort cards for the W1 QSL bureau. Better than 75% are for CW contacts. Somebody better get a clue here.

For those of you who will take exception to the "CW requirement" for the internet...Lighten up or get a life!

73 to all, even no-coders de W1AAE

>for emergency/disaster communications even register with you?

The United States -- the world, actually -- has not seen a disaster
of biblical proportions in some time. In the past century, every
disaster has been localized, and over the past twenty years advances
in communication science have negated the need for amateur radio
operators at *all* levels.

Naturally, hams continue to assist and fill a role, but communications
networks in emergency situations would not collapse and become
non-existance if hams were not around. Local governments now have a
multitude of state, regional, and federal agencies with which to
coordinate disaster assistance, and communications is the one thing
that is always top on the list. The only time hams would become
"vitally important" to emergency communications again would be in a
situation where those regional/federal resources are not available,
or are overtasked.

You can add 14.300 and 14.313 to that list. I rarely tune my rig above
14.299.99 anymore. It is to young to listen to the stuff up there!

Perhaps you would share with us some of your specific pros and cons
relative to OS/2 and Windows.

I've tried OS/2 in two of its versions - I believe my first was
ver2.0, and then I tried the Warp version. I never had as much
trouble with any Microsoft product. My woes were:
Inadequate driver support for CD-ROMs
Sound Blaster problems with DOS Games, such as Doom
Windows Apps ran slower in the OS/2 environment
Crashes were just as frequent as in anything else.

On the other hand, I would say that IBM was setting the pace on Object
Oriented Interface, and I think the Windows 95 desktop was a copy of
OS/2.

>Hey - if morse code is so bad,

It's not bad, it just has no compelling reason to
continue to be a license requirement.

>so tough to learn,

The degree of difficulty is not the issue at all.

>so out dated

It is certainly out dated as it's use has now down to only
a recreational aspect (QSOs, DX, contests, etc.) within the
ham ranks only. Even in the ham ranks it serves no
purpose at all in emergency preparedness and or any
actual safety or distress operations.

and so
>completely useless,

It isn't useless (procode red herring again) it has its
proponents and users, but none of the uses suffice any
longer to mandate the separate pass/fail test element that
code contines to have. Yes, there's a treaty requirement
today, but that is met completely by a 5wpm test for
now and there's no additional treaty elements that
require 13 or 20wpm testing.

>as many no coders continuously whine,

Again, many (most?) of us that are championing
the end of code testing are NOT nocoders, but rather
coded hams who have already passed various levels of
code testing.

>why do I see
>the majority of qsl cards for CW qsos? I presort cards for the W1 QSL
>bureau. Better than 75% are for CW contacts. Somebody better get a
>clue here.

What's the point? QSL cards are just the exchange of record for
a contact. It isn't the USE of CW that we oppose, it is the
mandated test requirement that is wrong for the license
testing today. If, as you note, most QSL exchanging is for
CW contacts then I see no reason to think

that continued use of CW will end IF code testing
ends. Indeed, if DX continues to be the interest area
it always has been, then there will continue to be new
devotees to CW for that reason alone. Having said that,
I'll repeat again that DXing is not a reason that justifies
mandated CW testing today.

3189. Yaesu FT-920 - good choice?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-19 00:00:00 UTC
From: kenk@primenet.com
Message-ID: <64v1ac$h36@nntp02.primenet.com>
Source record: 186334

I'm considering a new rig. After browsing the catalogs the Yaesu FT-920 seems the best for my purposes. Can someone think of a better choice with roughly the same features at the same or a lower price?

The 160 coverage I can live without. The 6M is ok but not essential. I do want DSP and a built-in keyer. I plan to do a lot of CW. The separate RX ant not essential. The many keyer and VFO memories are not essential; a few will do.

Some questions. Has this a built-in AC P/S? The ad doesn't really commit to one but there is no separate P/s offered. Will the built-in ant tuner work with a balanced feedline? Is it any good? What's the Yaesu CAT system? Does it have any computer interface features?

Any other comments?

TIA.

Thanks for pointing that out, Gary. I was going to say the same. (I
have friends in that business and they climb broadcast towers all the
time)

Two more notes on this subject: While rewriting OET 65, the FCC
learned that there are as yet no widely accepted models for RF
exposure to MW AM broadcast tower climbers. In other words, nobody
really knows how much RF those climbers are exposed to. It may be in
excess of the standard, but nobody is sure.

Last: suits, if worn, must be worn exactly according to manufacturer's
instructions. No clothing may be left off. If any part of the suit
is not worn, localized RF heating can take place on certain areas of
the body (and not always the exposed parts either). While normally
the suit may be a defense against high RF exposure, a tear or

separation could result in parts of the body getting cooked. This is far worse than the alternative of diffuse exposure across the entire body.

Bottom line: For most applications (such as tower climbing) RF suits (such as Naptex) are a bad joke. This looks like another idea conceived by an RF ignorant person. Sure it works in theory, but in practice it may be more dangerous than not wearing one at all.

Potomac Electric Power Company in the Washington DC metro area also has a technician with a vehicle with appropriate equipment to chase power line noise.

I had such noise and I "knew definitely" just which pole it was coming from--except that I was wrong! That pole had a cable TV power supply which I blamed for the noise, because I had an HF direction-finding radio (used for boating purposes) which pin pointed the noise to that exact pole. After the cable TV guy came out, he said it wasn't their problem, but to please me he would plug-out the whole power supply and lug-in a new one he had on his truck. I told him if that didn't cure the problem, I wouldn't bother cable TV any more. He did and I didn't, because the problem continued. That's when I got the power company's guy out. He used my HF direction finder and found the problem. It was a faulty light control on her inside garden. She changed it and my problem went away. Now, let me tell you that the power company guy and I were permitted to go throughout my neighbor's house "direction finding" the problem. That's a situation you won't always get.

One thing I learned from the power company guy that was quite impressive about power line noise is that the power lines make beautiful antennas which can spread to noise over thousands of feet and sometimes miles. A big problem finding the offending insulator or "spark"-producer is that each pole with a ground (and most all poles have grounds) becomes a node for the noise. Therefore, an HF direction finder actually finds the node and not the problem.

HAPPY HUNTING. Hope this helps just a teeny bit.

>I'm moving as well and need to get the new address on there

Get your hands on a new 610 if necessary by calling (888) CALLFCC, and
requesting that one be sent to you.

On that 610, put down all of the requested information. Then write a letter
stating that you have lost your license and all copies, and of course
sign it. Send to the address on the 610. Then your license is good until
the date of expiration with the proper address. Oh, one more
suggestion, make 10 photocopies of your new license, keep 2 copies
in the car. I also suggest that you check your wallet for the wallet sized
copy of your license, you may have it in there, remember, the FCC will
take a photocopy of either.

Go tell that to the BBC, VOA, etc. They'll be surprised to learn that
their broadcasts on amateur frequencies are illegal. Hint: the
frequencies mentioned are not amateur exclusive, though amateurs
wish that they were.

>I second that. All those in favor?

Let's just modify it a tad. How about we change it from codeless
to clueless? As a result, you should turn in your newsreader
immediately.

>Hey - if morse code is so bad,

Few have said it's "so bad". It just isn't the be all end all of
communications as it was 50-70 years ago.

>so tough to learn,

So is the theory, but I don't hear anyone complaining about it
because the rationale for it as a requirement is spelled out
in Part 97.

> so out dated

Well that it is.

> and so completely useless,

Again, few if anyone has said that. It's simply no more important
than any other aspect or mode in amateur radio.

> as many no coders continuously whine,

The only whining I see is from clueless folks that can't even understand
the issue isn't about Morse Code, but the requirement for
demonstrating its knowledge at higher and higher speeds to
access portions of the amateur spectrum. You might rent a
clue and check the call signs of most of those posting in favor
of change. You'll find that they have passed as many or more
Morse Code tests than your license class indicates you have.

>why do I see
>the majority of qsl cards for CW qsos? I presort cards for the W1 QSL
>bureau. Better than 75% are for CW contacts. Somebody better get a
>clue here.

Because DX chasers haven't discovered the latter half of the
20th century? No, just kidding. As an apparent wall paper chaser
yourself, you well know that it is an amusing activity to some and
many feel it is more sporting to do it the hard way. What any of
that has to do with licensing requirements is hard to imagine.
The clue you really need to rent though, is that no one cares
whether you find manual OOK Morse Code amusing and no one
is trying to prevent you from continuing to use it. The need for
Morse Code as a licensing requirement has long since disappeared.

>For those of you who will take exception to the "CW requirement" for the
>internet...Lighten up or get a life!

Why not have it as a requirement? After all, if you are going
to make arbitrary unrelated requirements for some activity, it's
about as valid as making Morse Code knowledge a requirement
to access amateur frequencies below 30 MHz.

>73 to all, even no-coders de W1AAE

73 to all, even the clueless,
Todd
N9MWB

PS This post has had its follow up line set to rec.radio.amateur.policy
as
I'm sure the other newsgroups have had their fill of this nonsense.
Please take the discussion over there.

I don't use the VOX..... only the switch. I have checked as best I can
all screws and sources of floating grounds. I am led to believe that
the problem is with the oscillator in the sidetone circuit.... but I'm
not sure what other components besides the transistor oscillator may be
flakey and causing the problem ??

A couple of years ago I posted on the old fido echo ham radio and had lost
it. I have had many requests for it
Thanks to N8BLK finding the last 2 posts in his archives here it is.

Marty, I only found part 2 & 3, when I checked, however hope this helps or
brings back some memories, I'm copying it into this message.

```

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but
I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom
are
removed). With this rig this is pretty simple. After removing the case put
the
radio on it's back all modifications are on the bottom. (All refrences will
be
frm the rig on it's back and facing you) Then remove the cover from the
tuned
circuits. It will be the large cover on your left with a bunch of holes in
it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components
to giove 30 meters it's own tuned circuit in receive and transmit.

The first thing we need to do is get oriented. We will call the first circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting the
WWV setting with 20 meters. You will need to remove the jumper on wafers C and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2 mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab
(the next one to the right with the cloth cover). All we need to do

now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there
are many sources for these.

1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the
relay to switch the 28 and 29 mhz crystals. Should be easy as one leg is grounded so all you need to switch is 1 leg per crystal. As I stated before I plan to use the clarifer switch and replace it with a pot with a pull-on switch. With some nice rub on numbers you could make it look factory.
(BTW Does anybody know of a good source for these in white? All I can find around here are black)

I am in the proccess of making many more mods to this radio to bring it onto the 90's. I can't help it. I'm a tinkerer. I'd rather work on my rig than
use it (Grin). I will be posting them as I get them completed.
(If there is interest)

YES RIGHT YOU ARE G-Ray!!

Aye SWL the ham bands and it be real Circus of Indius complete with
critchety old 2-faced farts, cheap assed bastards who try to jew down on a
25 cent price item at a hamfest and many sexual perverts than
in the redlite district of town. Greatest collection of geek mental
patients in any place. I went to a few ham fests with CB friends from the
Raleigh-Durham NC area, never seen bigger collection of nut cases wearing
clothes looking like they have not been washed in ten Years. My faves were
the ham goofballs wearing old army and cammo type clothing with 4 or more
walkietalkies on their beer gut streech'd belts. They look and act like
they were ready to go to a McDonalds or a Lubys after the hamfest with an
assault weapon or back to work at Post Office the next day. Scary!
Be afraid as most hams seem to not be wrapped too tite in the head.

Anyway here are some frequencies where you can hear ham radio ops in their
natural enviornmental, using dirty language on a DAILY 24 HOUR
shift work. These nuts really must not need sleep, I hear them comedy all
time on my old R-1000 Kenwood which sits next to my Uniden 2510 and
Sommerkamp CB radio - Leon N.C. "Hoppy Leo"

6am all day long, till sundown --> 14.300 to 14.313 USB
After sundown or starting 8pm to midnite --> 3.894.5 & 3.901 & 3.950 LSB
Midnite to 6am --> 3.853 or sometimes 3.950 continued LSB

24 Hours a day -- 7 days a week all manner of nutcase and mentaly
derranged ham op's on the above freq's and also check 3.850 LSB
late nite when 3.853 is quiet not too often.

There are WEB PAGES put up by hams with more info on crazy
places on ham radio bands. Here are a few to go see sometime:

I would think that ham rigs are designed for a particular operation cycle
(i.e. transmit for x seconds, receive for y seconds, standby for z seconds.)

If you constantly transmit for an hour you're likely to fry the rig.

How can somebody be "elected" when there's no vote? "Declared
appointed" would be a better choice of words.

SB QST @ ARL $ARLB070
ARLB070 FCC issues RF safety Supplement B to OET Bulletin 65

ZCZC AG70
QST de W1AW
ARRL Bulletin 70 ARLB070
From ARRL Headquarters
Newington CT November 19, 1997
To all radio amateurs

SB QST ARL ARLB070
ARLB070 FCC issues RF safety Supplement B to OET Bulletin 65

Hams now have basic guidelines and tools to evaluate their stations for compliance with the FCC's RF exposure guidelines that go into effect January 1, 1998. The FCC's Office of Engineering and Technology issued the long-anticipated Amateur Radio Supplement B on November 18. The FCC worked closely with the Amateur Radio community to develop the new supplement. Several ARRL Headquarters staff members and Technical Advisors reviewed preliminary drafts of the supplement. ARRL Lab Supervisor Ed Hare, W1RFI, has been the League's point man for RF safety and exposure issues.

Supplement B, subtitled Additional Information for Amateur Radio Stations, contains detailed information specific to ham radio stations. It is designed to be used in conjunction with the FCC's OET Bulletin 65 (Version 97-01), Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields. The revised Bulletin 65 was issued earlier this year. Supplement B covers definitions of RF radiation and discusses the FCC exposure guidelines and their applications, methods of predicting human exposure, estimating compliance distances, and controlling exposure to RF fields.

The supplement runs approximately 70 pages. Among its noteworthy highlights are numerous easy-to-use tables based on various frequencies, power levels and antenna configurations to help hams determine whether their stations comply with the FCC's published RF exposure guidelines. Most tables show compliance distance--the distance that an antenna needs to be located from areas of exposure to be in compliance. (For a closer look, see ''FCC RF-Exposure Regulations--the Station Evaluation,'' by Ed Hare, W1RFI, which will appear in the January issue of QST.)

The new RF exposure rules go into effect January 1, 1998 for all new stations and for those filing a Form 610 with the FCC after that date. Existing stations have until September 1, 2000 to comply with the new rules. But, existing stations making changes that could affect RF exposure from their station--such as increasing power or relocating antennas--must evaluate that change if done after January 1, 1998.

As first announced, the FCC set a power threshold of 50 W to trigger the need to do a station evaluation. In late August, the FCC revised the power level thresholds to trigger a routine Amateur Radio station RF exposure evaluation. Those changes were welcome news for most hams. The newest guidelines raised its original 50-W threshold on all bands except 10 meters through 2 meters, where it remains at 50 W.

The FCC went along in part with an ARRL request and established a sliding scale for threshold levels dependent upon frequency. The revised thresholds are 500 W for 160 through 40 meters, 425 W on 30 meters (the maximum legal power is 200 W), 125 W on 17 meters, 100 W on 15 meters, 75 W on 12 meters and 50 W on 10 meters. The threshold for all VHF bands is 50 W. On UHF, the threshold level is 70 W on 70 cm, 150 W on 33 cm, 200 W on 23 cm, and 250 W on 13 cm and higher frequencies.

The threshold for amateur repeaters is 500 W effective radiated power (ERP) if the repeater antenna is located on a building or is less than 10 meters above ground.

Stations operating at or below these respective power levels are categorically excluded from having to conduct a routine RF radiation evaluation. Mobile and portable (hand-held) devices using push-to-talk operation generally are also exempt from evaluation. But, all stations--regardless of power level--still must comply with the RF exposure limits that become effective New Year's Day.

OET Bulletin 65 and the new Supplement B are available at http://www.fcc.gov/oet/info/documents/bulletins/#65.
Copies are available from International Transcription Service Inc, 1231 20th St NW, Washington, DC 20036; tel 202-857-3800; fax 202-857-3805.

3217. Re: Pwr Supply Hum?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-19 00:00:00 UTC
From: Bob Lewis <aa4pb@erols.com>
Message-ID: <347351AC.6F3244EE@erols.com>
Source record: 186362

Assuming thay you mean hum comming from the receiver or whatever device is connected to the supply (rather than mechanical hum from the supply itself) it is usually an indication of a bad filter capacitor. By the way, the hum is probably 120 Hz rather than 60 Hz - as a full wave rectifier's ripple output is twice the input frequency.

Two years ago this comming February, Oregon experienced flooding. The only local, state, regional, federal, or commercial communication into or out of a community west of Portland was the federally licensed hams.

I was in the Washington County EOC when it became known that hams were the only communications into or out of the Vernonia area. I watched as the EOC representative listened in the ham radio room, I watched as she talked over the ham radios, and I watched as the National Guard Commander talked over the ham radios. I listened as the EOC representative said she could not release the hams because they were the only communications into or out of the area.

The next day I listened as hams guided a National Guard unit through the back roads into the community. I also listened as hams collected and delivered needed supplies to the community.

The hams were not released until a ham in the area allowed the phone company to temporarily install a portable cell site on his land. Calls were relayed through a cell site in southern Oregon back up to Portland. (One could say that hams continued to assist the community.)

I am certain that the community did not expect there communication systems to fail. They not only lost communication into and out of their community, but they also lost police and fire communication within the community when the flood took out fiber optic cables.

So, while the public's communications systems are getting better, I believe that hams will always be needed in emergency situations. Failure to plan for it means that you are not as prepared as you need to be.

3219. Re: Alinco DJ-S11T need RX mod

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-19 00:00:00 UTC
From: Trent Drenon <tdrenon@telis.org>
Message-ID: <64vuig$em6$1@mentor.telis.org>
Source record: 186364

I found this on dejanews.
Good Luck! Trent
You need to remove a TINY resistor. Though the following mod is for the
DJ-S41, it works just fine on the DJ-S11. RX will be approx: 137-173 MHz
(off the top of my head, don't have the radio on me now). BTW I am
forwarding what was sent to me and accept no responsibility for what you
do to your own radio.Here's the mod:
Subject: EXPANDED RX / TX MOD FOR ALINCO DJ-S41
Performing this modification will void any warranties.
All standard disclaimers apply. This mod is for the
DJ-S41T, and not the DJ-S41(C) 10 mW version.
1. Place the radio face down on a soft towel. This avoids
scratching the display and gives you a place to put
the seven tiny screws to be removed. 2. Remove the batteries.
3. Remove the three screws on the upper rear cover, and
the four screws inside the battery compartment. The
rear cover can be lifted and removed easily, as there
are no wires to be concerned about. The antenna
connection is made by means of a gold-plated spring contact.
4. Look for a small (about 1 mm) green surface mount
resistor (actually a 0 ohm jumper), located on the far
left side of the exposed circuit board, located to the
"northwest" of the speaker. There is a marking in white
letters, OP/CL, this resistor is over the top of the "P".
It is the only green component visible on the board.
(This radio does not have the traditional Alinco red
and blue wires which have become so familiar...)
5. Carefully remove this resistor, using a small tip soldering
iron, tweezers and a steady hand.
6. Re-assemble the radio, being careful that the thin rubber
gasket is seated around the inside edge of the rear cover.
Replace the batteries, press and hold the "F" button on the
left side of the radio, and turn it on. The display should
show all segments and markings. Release the "F" button and
the radio will now be capable of operating from approximately
425 MHz to above 470 MHz, depending on the VCO's tuning.
The display will blink if the VCO is taken out of its range.
Re-tweeking of the VCO is not recommended.
7. Although reception on the expanded frequencies is legal,
transmission is not. This unit is not FCC type-accepted
for anything but ham band (425 - 440.995 MHz) operation.

FOR SALE:

Standard C5608DA Twin Band Mobile
VHF 5/10/50 Watts
UHF 5/10/40 Watts
Extended transmit and receive: Works well on MARS/CAP as well as commercial VHF and UHF frequencies.
Capable of AM on VHF aircraft band
Crossband Repeat
Remote control microphone with display: Radio can be trunk mounted!
CTCSS
DTMF including DTMF paging
Includes Diamond MX-72D duplexer to allow the use of a single dual band antenna
Includes Larson 2/70 mobile antenna and NMO mount kit
Operators and Service Manuals included
$450 O.B.O. price includes USPS shipping to any US location

ALSO:

Heath HW24HT Dual Band Portable
This radio was mfg by Standard Amateur Radio and was not a kit
VHF 250 mW/5 W
UHF 250 mW/4 W
DTMF
CTCSS
Alkaline Battery Pack
3 NiCad battery packs that need to be rebuilt, with wall (slow) charger and desk (rapid) charger
Extended transmit and receive: Works well on MARS/CAP as well as commercial VHF and UHF frequencies.
Operators and Service Manuals included
$250 O.B.O. price includes USPS shipping to any US location

These radios were owned and maintained by an amateur radio operator who is also a commercial wireless technician. These radios are very clean and meet or, in many cases, exceed the manufacturers specs.

I really need the cash but might consider trade for Amateur HF gear or Commercial VHF/UHF/Microwave gear.

Your absolutly right and for anyone that thinks that broadcasting is the
way to go just go listen to the broadcasts made by K1MAN everyday
on 14275khz. Many of us have been trying to get this guy off the air
for years but the FCC and the ARRL don't seem willing to do anything about
him. He fires up his broadcasts (which are tapes) right over other
conversations and when we have had the chance to chat with him live
he says it's is "given right".

As a non american the situation with this guy has been very
frustrating
to say the least, dealing with the FCC and ARRL is almost a waste of time,
it's time for american hams to start policing there own and get ride of guys
like K1MAN who broadcast. The same goes of the live broadcasts of the
space shuttle on the ham bands and any other broadcasting that goes
on by anyone in any country. If people want to broadcast, get a broadcast
licence and go send to your hearts content in the broadcast bands as laid

down by international treaty! Get off the ham bands!

I'm sure I'll take flak for my comments but for anyone who disagrees
go
and have a conversation about it on 14275 khz and you'll see what I mean
when the broadcast fires up and wipes out your conversation. Do you want
this happening on all frequencies all day long? Think about it.

Whoa! One of the best gags in years!!!!
Lesseee,the Amateur Radio Service is "clean,and a success??" GARBAGE!
This is not an idle claim,let's fire up our radios and listen.What do we have here? Ummmmmm,Twenty meters during the weekend.....Gee,sounds a whole lot like what I hear on cb 19.....Lets spin the dial down to Eighty meters.Listen to some of these guys say F*ck this,S*it that...Hey! thats not allowed!!! I don't understand,they are using their callsigns! Why does this happen? Why does this continue?Because the "clean and success" line is is bogus.

Considering the round to the foot you have recently taken your
credibility is notat an all time high. OTOH Gary does exhaustive
research for his postings as evidenced by his technical postings. It
would seem unlikely to a reasonable man that he would fail to research
his non technical postings. In consideration of this and your recent
crisis of credibility I must, as a reasonable man, conclude Gary is
right and you are full of meadow muffins.

You could shut up before you make more of a horse's ass out of yourself
than you already have but I don't think you will. Consider this a
little incentive for you to make a bigger fool out of yourself. I know
you don't need any help in this reguard but I'm here to serve.

BTW .policy is the place for this discussion please humiliate me there.

With all due disrespect Jerry

In case it escaped you, the tight front end of the HTX-202 & HTX-404
make them the superior to ANY other HT when it comes to dealing
with intermod. At any price. Check out the QST reviews.

Not everyone wants a gameboy for a HT.

Whole lot of historical stuff deleted as irrelavent.

Who really cares about what the real motive or goal of incentive
licensing was anyway. The issue at hand is the ending of
morse testing for amateur HF licenses as we enter the 21st
century. The incentive licensing issue is 30 years old
and bears as much in relation to 1997 as did the decisions
made in the 1920s relative to ham operations in the 1950s.

Those that want to dwell in history are free to do so, but
know full well that decisions, intent or goals of
FCC action in the 1960s has little meaning or impact on
decisons made today. All the discussion of what did or
didn;t happen 30 years ago is fine for those that enjoy
the historical debate, but there's little, if anything, there
that impacts todays decisions.

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom are
removed). With this rig this is pretty simple. After removing the case put the
radio on it's back all modifications are on the bottom. (All refrences will be
frm the rig on it's back and facing you) Then remove the cover from the tuned
circuits. It will be the large cover on your left with a bunch of holes in it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components

to giove 30 meters it's own tuned circuit in receive and transmit.
The first thing we need to do is get oriented. We will call the first
circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu
calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending
with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions
from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting
the
WWV setting with 20 meters. You will need to remove the jumper on wafers C
and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only
place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2
mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab

(the next one to the right with the cloth cover). All we need to do
now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there

are many sources for these.
1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a
premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect

to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the
relay to switch the 28 and 29 mhz crystals. Should be easy as one leg is grounded so all you need to switch is 1 leg per crystal. As I stated before I plan to use the clarifer switch and replace it with a pot with a pull-on switch. With some nice rub on numbers you could make it look factory. (BTW Does anybody know of a good source for these in white? All I can find around here are black)

I am in the proccess of making many more mods to this radio to bring it onto the 90's. I can't help it. I'm a tinkerer. I'd rather work on my rig than
use it (Grin). I will be posting them as I get them completed.
(If there is interest)

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all
amateur radio vendors, and many national electronic chain
outlets, in an effort to shore-up the sagging radio sales
picture, were given the authority to issue amateur radio
call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the
call sign block of "WT" along with the district #, for all vendors
to issue. These "try before you study" licenses will be issued
for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the
hobby is worth the effort of all the study time, is authorized to
operate for a period of one month along with the purchase of a
radio. The new operator will be authorized at the General class
level with a "WT" call sign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a
class, or take their exam from a local VEC or from the vendor,
which is also now authorized to give radio exams. If the
operator decides the hobby isn't worth the aggravation they find
on the HF bands, he/she can return the radio for a full refund.

I gotta hand it to some of these folks.

In a 10-minute period Tuesday night, I heard the word "SH*T" no fewer than five times from two or three individuals.

No, you pronounce the above * as an "IIH" sound.

Not that most of them are bad people - the overall discussion was pretty tame, and actually quite interesting. The use of profanity, however, was indeed an infraction. Repeated many times.

What impressed me was that they gave their callsigns. They're basically mocking the system, which of course lets itself get mocked through inaction.

"OK, FCC, bust me."

Yeah, right. Like THAT would ever happen. Seems to me there were nominally a dozen violations made in that 10-minute period. The FCC COULD impose fines, etc., for any of them, and in the past would have.

"Oh well," right??

Yes, it is a linear amplifier, called the Invader 2000.

The same as K1MAN, who is sending bulletins that are perfectly legal.

SOme whiners tried to attack him and get him off the air about three
years ago, and they were vocal, including nasty remarks on the
internet, things like petitions, threats, maybe lawsuits, I don't
remember. In any event, they failed miserably.

A lot of people enjoy the W1AW and K1MAN bulletin transmissions!

For regular HF users K1MAN and W1AW use the same frequencies on the same schedules! Get used to it. There are so many people that listen to these (including myself) that we really don't want to have to be scanning up and down the band looking for them. For the sake of many, a few people can move!!! :) My $.02 worth.. Sometimes I think people complain just to complain..

There is already a "code requirement" for the internet.
Every user has to learn how to type. This weeds out those with no
hand-eye coordination or touch-insensitive persons...
The skill of touch-typing is very similar to the Morse skill.

In fact, my maximum CW speed and typing speed at one time were almost
exactly the same (topping out at about 45WPM). I had a "mental block" at
that speed for some reason. Through practice I increased my typing speed
to about 60WPM. Internet chat groups on the low end of the #channels
(where all the DXers work) was the fix.

Hello,

A few years back I picked up some "Ham" study books but never took the test. I just took out the books and I read something about the test bank being good through this past Summer (I'm not certain about the date, but, anyway, the test bank in my books has expired). I would like to relearn this stuff and take the test for my "ticket."

Can someone please tell me if there have been enough changes to justify getting a new study book or if I should just study the old stuff. If there were a _few_ changes, is there somewhere I can find out what the changes were and just supplement my existing book with the new info.?

Thanks for any help.

The class I was going for was the Tech with code (Novice & Tech at one time).

Thanks again and I'm sorry if this is off topic for this news group. I looked at the different groups and thought it might fit best under "misc" (miscellaneous?).

I doubt if the US government (a la FCC) will ever legalize what is now illegal unlicensed broadcasting. In case you have not heard, on Nov. 19 the government in the form of "heavilly armed" DoJ agents, Customs Agents and FCC Engineers raifded three Tampa Fl. pirate stations; carted away every bit of electronics in sight -- including the guy wire holding up antennas; and also carted one pirate broadcaster off to jail to face a 14 count citation. He could serve 2 years in jail and be fined a half million dollars.

And the words "heavilly armed" come from several news reporters -- TV and print -- that went along on the pre-dawn raids.

This, coupled with raids last month in Miami, West Palm Beach and Kansas City -- and 2 months ago in Sacramento Ca. seem to indicate a trend. One saying that the government -- all agencies in any way involved in interstate commerce (broadcasting is considered as commerce) -- are geered up for an all-out war to obliterate all unlicensed broadcasting.

How much you want to bet that we will see a lot more raids like this in coming weeks and months.

> Vartan

Jeff,
I'm glad someone finally got around to answering your origional question. It's getting pretty deep around here, so I guess you have enough sense (or have learned from this group) to stay away from the ham bands!
You will most likely have to provide additional cooling, or run the rig well below it's rated power limit as the above poster implies. They are made for mostly voice, SSB transmissions and would croak pretty quick if used in AM mode continous duty. If you are intending to use SSB the same applies if broadcasting music or continous modulated audio. If you are planning on using high power, there are quite a number of table-top amplifiers that would stand up to 400 to 500 watts output of AM signal and be happy running this way 24 hours a day, 7 days a week.
I must also say that all of this is illegal if done inside the United States or its posessions, so you must be prepared to be well outside the territorial limits of not only the states, but the rest of the countries that are members of the I.T.U.

Good Luck,
Steve

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom are
removed). With this rig this is pretty simple. After removing the case put the
radio on it's back all modifications are on the bottom. (All refrences will be
frm the rig on it's back and facing you) Then remove the cover from the tuned
circuits. It will be the large cover on your left with a bunch of holes in it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components

to giove 30 meters it's own tuned circuit in receive and transmit.
The first thing we need to do is get oriented. We will call the first circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting the
WWV setting with 20 meters. You will need to remove the jumper on wafers C and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2 mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab

(the next one to the right with the cloth cover). All we need to do
now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there

are many sources for these.
1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect

to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the
relay to switch the 28 and 29 mhz crystals. Should be easy as one leg is grounded so all you need to switch is 1 leg per crystal. As I stated before I plan to use the clarifer switch and replace it with a pot with a pull-on switch. With some nice rub on numbers you could make it look factory. (BTW Does anybody know of a good source for these in white? All I can find around here are black)

I am in the proccess of making many more mods to this radio to bring it onto the 90's. I can't help it. I'm a tinkerer. I'd rather work on my rig than
use it (Grin). I will be posting them as I get them completed.

A couple of years ago I posted on the old fido echo ham radio and had lost
it. I have had many requests for it
Thanks to N8BLK finding the last 2 posts in his archives here it is.

Marty, I only found part 2 & 3, when I checked, however hope this helps or
brings back some memories, I'm copying it into this message.

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but
I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom
are
removed). With this rig this is pretty simple. After removing the case put
the
radio on it's back all modifications are on the bottom. (All refrences will
be
frm the rig on it's back and facing you) Then remove the cover from the
tuned
circuits. It will be the large cover on your left with a bunch of holes in
it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components
to giove 30 meters it's own tuned circuit in receive and transmit.

The first thing we need to do is get oriented. We will call the first circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting the
WWV setting with 20 meters. You will need to remove the jumper on wafers C and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2 mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab
(the next one to the right with the cloth cover). All we need to do

now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there
are many sources for these.

1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom are
removed). With this rig this is pretty simple. After removing the case put the
radio on it's back all modifications are on the bottom. (All refrences will be
frm the rig on it's back and facing you) Then remove the cover from the tuned
circuits. It will be the large cover on your left with a bunch of holes in it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components

to giove 30 meters it's own tuned circuit in receive and transmit.
The first thing we need to do is get oriented. We will call the first circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting the
WWV setting with 20 meters. You will need to remove the jumper on wafers C and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2 mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab

(the next one to the right with the cloth cover). All we need to do
now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there

are many sources for these.
1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a
premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect

to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the
relay to switch the 28 and 29 mhz crystals. Should be easy as one leg is grounded so all you need to switch is 1 leg per crystal. As I stated before I plan to use the clarifer switch and replace it with a pot with a pull-on switch. With some nice rub on numbers you could make it look factory. (BTW Does anybody know of a good source for these in white? All I can find around here are black)

I am in the proccess of making many more mods to this radio to bring it onto the 90's. I can't help it. I'm a tinkerer. I'd rather work on my rig than
use it (Grin). I will be posting them as I get them completed.

Actually, there is a special exception in the rules to allow
rebroadcasting communications from the space shuttle.

W1AW does not broadcast to the general public (which is illegal on the
ham bands) they are sending a one way message of Ham interests to other
Ham operators.

Too bad they aren't as much fun. Most things that are fun or bring
satisfaction, are either illegal or "immoral".

From: "Bruce....N4ZEZ" <n4zez@alaweb.com>
Message-ID: <34741B9C.32FB@alaweb.com>
Source record: 186305

I have a Sommer XP507 antenna for sale. It is in perfect shape, about 4 years old that I am needing to get rid of. It is assembled and laying on some saw horses in my back yard and can be checked with a meter for operation if you like. It works 10-12-15-15-20-30-40 meter bands, 15 foot boom, 7 elements, and about 75 pounds.
I WILL not ship this antenna so if you are interested and live close enough, email me. I am asking $275.00 or best offer.

Here's a prime example of the arrogant, pro-code jackasses who are
ruining Amateur Radio.

Demonstrating to the government that you Know the Holy Code allows
one to enter the Temple of the Holy HF, the Lower Bands Lodge Hall
where only the Good and True amateurs reside.

Take heart Michael,

I have a simular story to yours. I once was a loyal Alinco customer. I
THOUGHT they had a good product at a good price. Then my 580 developed
problems. The "customer service" was noticabily lacking, their "engineer"
did not inspire confidence, etc. etc.

Needless to say, I'll spend a little more for the ICOM, Kenwood, Yeasu
radios from now on.

So is K1MAN. And BTW, broadcasting to the public is illegal for hams to
do, but it isn't illegal on the "ham bands", as the numerous SW broadcast
stations on 40m clearly demonstrate.

Greetings!

Maybe someone here could help me/shed some light on the subject. This is what i'm looking to do..

The security company I work for is looking at setting up an MDT Network. At first, we'd just like the units to talk back & forth for communications that can't be passed on voice channels, then in a few months we'd like to expand it to add database capability for our contacts, etc.

We have Motorola 9100-20 MDT's installed in the vehicles currently (4 of them we have total). Our question is, whats a cheep/inexpensive way to get these things to communicate with each other? We need probably 15-20 mi's of range. Does anyone know of any inexpensive services in the Chicagoland area that may be of assistance, or if anyone can shed *ANY* light on this subject...please email me at gkaiser@starnetinc.com

Thanks!
Greg Kaiser

3287. What is the different between deviation and bandwidth

Newsgroup: rec.radio.amateur.misc

Source record: 186317

Some one can told me, what is the meaning of deviation ?
Is it same with bandwidth ?
I read MC2833 databook from motorolla (MC2833 is single chip
FM transceiver), but I can't find bandwidth information.

I want to build FM transmitter for 9600 Bps, anyone know
where to find enough information for :
1. calculate require bandwidth for specific baudrate
2. How to modify HT/rig transceiver so it can handle
a high speed baudrate (9600bps)

The radio's RF stages (look at the schematic) render such a
mod pointless - the front end filtering is so tight that even
if you could get the radio to tune to an out-of-band frequency,
it would be deaf.

Are there any other worthwhile things people would like their
HTX-202s to do that they don't already do?

If you want wide band receive, buy a different radio.
Happy intermod!

What exactly are CB-like purposes? Is that like wallpaper collecting?
Perhaps its like contesting, i.e., he who has the biggest signal wins?
In this country, I suspect many areas are better served by REACT
groups than by amateurs willing to contribute their own time for
the benefit of others. Those communities probably see CB as
more valuable to them than snooty amateurs interested only
in their own personal gratification.

Here in the U.S., we are chartered to not only further the state
of the art, we are also expected to provide a service to the
public. We do this to help offset our free access to valuable
spectrum. Most of the popular amateur activities provide no
service to the general public. I suspect that if we continue to
focus on these personal entertainment activities instead of
providing a benefit to the public, we'll lose our allocations
regardless of our occupancy. Occupancy is another way to
stave off the usurpers, but it is a much more nefarious route
to take.

We need amateurs dedicated to providing a service to the general
public, not just quantity or "quality" (whatever that means.) We
need to ensure that the public and elected officials are aware
of the services we do provide, and need to encourage ALL
amateurs to partipate in those services. As it is, we mostly
reward amateurs for the recreational pursuits.

I'm sorry you had trouble with Alinco. I've had nothing
but a favourable experience with their products.
FWIW, I bought a Yaesu FT-51HP and had problems
with it. They had done a shoddy job on the PTT tactile
switch. It was not even over the contact. Fixed it myself.
I think I can honestly say that there is no one brand of
amateur radios that people have not had some kind
of problem with. I don't think there will ever be. Anyways,
the beauty of the system is if your not satisfied, buy another
brand. Good luck.

3M/WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE
RECORDER

Best offer in the $100 range takes it.

- THIS A GREAT COMPACT PORTABLE UNIT FROM EITHER THE LATE
1950'S OR 1960'S.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY UNIT.

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age. Very impressive
compact portable high end unit.

Mostly chrome or stainless steel case. Metal speaker grill
has some light rust in parts that can be easily taken care
of to make it perfect.

- SIZE (APPROX.)

6 3/4" HIGH x 11 3/4" WIDE x 10 5/8" DEEP

- WEIGHT (APPROX.)

18 pounds (fan cooled)

- BACK PLATE INFO

DES. NO. 185,262

PAT. NO. 2,877,958
2,942,875

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 track switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Does not include microphone.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

Plus shipping and handling which won't be much, because I'll pack it free.

I'll the best earliest cash offer in the above $ range by this coming Saturday, 11/22/97 12:00 Midnite E.S.T.

Thank you for reading this.

From Tad Cook, K7VVV
Seattle, WA November 21, 1997
To all radio amateurs

SB PROP ARL ARLP047
ARLP047 Propagation de K7VVV

Solar activity was up a little this week compared to last, and geomagnetic conditions were quiet. The average solar flux for the previous 90 days rose one point from 90 to 91, and the solar flux was above these numbers every day this week. This indicates an upward trend. The 90 day average was five points lower only a month ago.

Solar activity is expected to remain high, with solar flux values over 100. An active area (region 8100) is expected to return November 23, and this may send solar flux to the 110 mark from November 26 to December 1. Flux values are not expected to drop below 95 until December 10. This region, which produced X-class solar flares on November 4 and 6, may produce M-class flare activity this time around. Watch for active geomagnetic conditions around November 20 to 24 and again around December 3.

Ten and fifteen meters should open during the day with higher solar flux values. The best conditions, with high solar flux and low geomagnetic conditions, are currently forecast for the CQ Worldwide CW DX Contest after Thanksgiving.

With solar activity higher, it is fun to watch the progress of cycle 23 with a plotting program which graphs the daily numbers over time. Check out the Solar Data Plotting software from WA4TTK on the web at http://edge.net/~scraig/. This program automatically grabs the solar data from this weekly propagation bulletin to update its database. If you need to fill in gaps in your data, grab old propagation bulletins from the ARRL web site at http://www.arrl.org/w1aw/prop/1997-index.html.

Sunspot Numbers for November 13 through 19 were 41, 48, 35, 58, 74, 71 and 62 with a mean of 55.6. 10.7 cm flux was 90, 93, 96.2, 96.2,

94.2, 91.5 and 96.5, with a mean of 93.9, and estimated planetary A
indices were 4, 11, 7, 9, 7, 9, and 3, with a mean of 7.1.

To all radio amateurs

SB QST ARL ARLB072
ARLB072 WRC-97 Wraps up in Geneva

The 1997 World Radiocommunication Conference concluded its talks in the early morning hours of November 21 in Geneva, Switzerland. Amateur Radio survived WRC-97 largely unscathed, but the stage has been set for renewed spectrum battles at WRC-99.

The Little LEOs (non-voice, non-geostationary mobile satellite interests)--which put a huge scare into the ham radio community in 1996 with their proposals to share ham radio VHF and UHF bands--were unable to muster much support for new allocations at WRC-97. However, they came away with up to 3 MHz of additional spectrum on a regional basis, in the bands between 454 and 460 MHz. The Little LEOs also got a resolution calling for urgent studies in preparation for WRC-99--what some at the conference called ''a hunting license'' for additional VHF/UHF spectrum. A second issue that will recur at WRC-99 is finding a place in the 420-470 MHz frequency range for the Earth Exploration Satellite Service (EESS). Synthetic aperture radars (SARs) using frequencies in this range are said to be capable of penetrating the rain forest for mapping purposes.

Two significant ham radio-related issues failed to make the cut for consideration at WRC-99. For budgetary reasons, the WRC-97 delegates had to limit the WRC-99 agenda only to the most urgent issues. Pushed back to the tentative agenda for WRC-2001 were the possible realignment of the 40 meter band to resolve a conflict between hams and broadcasters in part of the band (along with possible expansion of broadcasting bands between 4 and 10 MHz), and Article S25 of the international radio regulations. Article S25 contains the international regulations specific to the Amateur and Amateur-Satellite Services, including the Morse code requirement for operation below 30 MHz.

WRC-97 delegates approved a resolution encouraging administrations to facilitate the use of ham radio and other ''decentralized means of communications'' for disaster mitigation and relief operations. This resolution eliminated the need for Resolution 640, which defined how certain ham bands could be used for international disaster communications by non-amateur stations, so Resolution 640 was suppressed.

WRC-97 delegates did agree to upgrade the Earth Exploration Satellite Service from secondary to primary at 1215 to 1300 MHz, which should have only minimal impact on amateur use of 1240-1300 MHz. The presence of EESS there also reduces the possibility that other, less-compatible services might later be introduced into this band.

In other allocations decisions, amateur satellite segments were not included among allocations for wind profiler radars. Except for a worldwide primary allocation at 1270 to 1295 MHz, the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis. Region 2 administrations were urged to implement wind profilers in radiolocation bands at 440 to 450 MHz, 904 to 928 MHz (protecting the lower, weak-signal segment), 1270 to 1295 MHz (protecting amateur satellite and weak-signal), and 1300 to 1375 MHz.

The delegates agreed that the bands 420 to 435 MHz or 438 to 440 MHz could be considered for use in situations where there was incompatibility between wind profiler radars and other radio applications at 440 to 450 MHz or 470 to 494 MHz (only in some Region 1 countries). In this case, too, the amateur-satellite segment is protected.

Several Region 1 (primarily European) countries deleted footnoted exceptions to the international table of allocations in the 1810 to 1830 kHz range, expanding the usability of 160 meters for ham radio. North Korea was persuaded to drop its bid for footnoted exceptions to the allocations table that could have affected some ham radio bands in that part of the world.

Amateur Radio was represented at WRC-97 by a multinational team of International Amateur Radio Union officials, including Secretary Larry Price, W4RA, Vice President Michael Owen, VK3KI, and Region 1 Vice Chairman Wojciech Nietyksza, SP5FM. They were assisted for a time by Tafa Diop, 6W1KI, and Eduardo Estrada, HC2EE, who are members of their respective regional executive committees. Numerous radio amateurs attended the conference in official capacities on behalf of their national administrations, including ARRL Technical Relations Manager Paul Rinaldo, W4RI, who served on the US delegation.

In all, 1801 delegates from 142 countries registered at the conference. Another 141 observers from regional and international organizations also attended.

In fact, just for eXercise, I wrote this posting without touching
my Keyboard, just cutting and pasting letters already on my screen.
So, even that's not a requirement. (The capital X in eXercise a
couple of lines back occurs because I couldn't find one in lower
case--ooh, I just saw one in the subject line! xxxxxxxxxxx)

I have 2 NOS 805 (1-RCA, 1-United) in original boxes and 8 used (mix of cetron, RCA) for $400.00. I also have 4 NOS Rca 834 tubes in original boxes for $200.00. All tubes show continuity and look very clean. Take the whole lot for $500.00; I am open to any offers or trades for audio tubes.

Thanks for reading,
Christian Magee

3305. How to buy all the new equipment you need . . .

DO YOU WANT TO MAKE BUCKS FAST???--AND NO ONE LOSES . . .
Of course you do, we all do !!! Here's how to do so with little effort, and, yes IT'S LEGAL.

Some people make things happen
Some watch things happen
While others wonder what has happened

This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50 in dollar bills? or $5,000? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!! (I'm glad I didn't)

Like you're doing now, I was checking out newsgroups and came across an article similar to this that said you could make thousands of dollars within weeks, with only an initial investment of $6.00! So I thought, "Yeah, right, this must be a scam!", but, like most of us, I was curious; I kept reading.

Anyway, it said that if you send $1.00 to each of the 6 names and addresses stated in the article, you could make thousands in a very short period of time. You then place your own name and address at the bottom of the list at #6, and post the article to at least 200 newsgroups.(There are about 22,000.)

No catch, that was it. After thinking much about it, I came to the conclusion that this could not be a scam (but, if it was, only scamed out of $6 , I could afford it.)

Even though the investment was a measly $6, I had three questions that needed to be answered before I could get involved in this sort of thing. Just like you, I was skeptical, or thought it might take too much work or something.

1. Is this really legal? . . . I called a lawyer first. This lawyer friend was a little unbelieving that I would actually make any money but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter but the details of the system (SEE BELOW) actually made it a legitimate legal business.

2. Would the Post Office be ok with this . . . I called them: 1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See Title 18,h sections 1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.

3. Is this moral? Well, everyone who sends me a buck has a good chance of getting A LOT of money . . . a much better chance than buying a lottery ticket!!! In the end it looks to me like no one loses, we help each other move ahead.

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps . . . and boy am I glad I did !!!

Within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just continued coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad total of $1,000.00 !!!!! In the third week I had over $10,000.00 and it was still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in . . . It's certainly worth $6.00 and 6 stamps !!!

So now I'm reposting this so I can make even more money! (and helping you to make a lot of money.) The *ONLY* thing stopping *ANYONE* from increasing their own bank account is pure laziness ! It took me all of 5 MINUTES to print this out, follow the directions, and begin posting to newsgroups. It took me a mere 45 minutes to post to over 200 newsgroups. And for this GRAND TOTAL investment of $7.92 (US) and under ONE HOUR of my time, I have reaped an incredible amount of money --like nothing I've ever even heard of anywhere before ! Enough said, time to start !

Let me tell you HOW this works, and most importantly, WHY it works. Also, make sure you print a copy of this article now, so you can get the information off of it when you need it. The process is very simple and consists of THREE easy steps:
STEP 1--Send the 6 people on the list a single dollar each.
STEP 2--Put your name and address on the list in position 6.
STEP 3--Post this amended letter to 200 (or more!) Newsgroups.

==========
HOW IT WORKS
==========

STEP 1:

Get 6 separate pieces of paper and write the following on each piece of paper:

PLEASE ADD ME TO YOUR MAILING LIST.
$1 US DOLLAR PROCESSING FEE IS INCLUDED.

(This is the key as this is what makes it legal since you are paying for and later offfering a service.)

Now get 6 $1.00 bills and place ONE bill inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent theft/robbery. Then, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase and a U.S. $1.00 bill. Now send to:

#1
JA Gualtieri
45-350 Columbia St. W.
Waterloo, ON, Canada N2L 6G3

#2
Andrew Wiggin

PO BOX 424
East Setauket, NY 11733

#3
Ashle
347 Jamboree
Manchester, MO 63021

#4
The Mom
4464 Castelar Street, #320
San Diego, CA 92107

#5
Chris Watson
1138 Indian Road
Virginia Beach, VA 23451

#6
Virgil
3538 West 12th Street
Trainer, PA 19061-5301

STEP 2: Now delete name #1, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as number 6 on the list. (If you want to remain anonymous, put a nickname, but the address MUST be correct, or you won't receive your dollars in the mail.)

STEP 3: Now post your amended article to at least 200 newsgroups. Remember, 200 postings is just a guideline. The more you post, the more money you make! As you might know, it's not that difficult to post to news groups. So, you don't know HOW to post in the news groups? Well, do exactly the following:

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

Highlight and COPY(Ctrl-C) the text of this posted message and PASTE(Ctrl-V) it into a plain text editor (like Wordpad or WordPerfect) and save it. After you have made the necessary changes that are stated above, simply select a newsgroup then COPY(Ctrl-C) and PASTE(Ctrl-V) the text into the message composition window of the newsgroup, and post it!

GENERAL NOTES ON POSTING: A nice page where you'll find all the newsgroups if you want help is http://www.liszt.com/ (When you go to the home page, click on the link 'Newsgroup Directory'). But I don't think you'll have any problem posting because it's very easy once you've found the newsgroups. All these web browsers are similar. It doesn't matter which one you have (But it makes it very easy if you have Netscape Navigator 3.0 or later. You may download it from the Internet if you don't have it.) You just have to remember the basic steps, stated below.

BASIC STEPS FOR POSTING:
1. Find a newsgroup and you click on it.
2. You click on 'POST AN/NEW ARTICLE' or 'TO NEWS' or anything else similar to

these.
3. You type your flashy headline in the subject box.
4. Now, either you attach the file containing your amended letter, or you PASTE the letter.(You have to COPY it from the text editor, of course, from before.)
5. Finally, you click on 'SEND' or 'POST' or 'OK', whatever is there.

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

That's it! You will begin receiving money from around the world within day's! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

==========
Now the WHY part:
==========
Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With a original investment of only $6.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30!

So lets put those figures at just 15 responses you get. Here is what you will make:

at #6 $15.00

at #5 $225.00

at #4 $3,375.00

at #3 $50,625.00

at #2 $759,375.00

at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can

you afford $6.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. We all just have to be honest and help each other get ahead.

REMEMBER-HONESTY IS THE BEST POLICY. WHAT ARE 6 DOLLARS TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! IF YOU NEEDTHE $6, I'M SURE ANY OF THE PEOPLE ON THE LIST AHEAD OF YOU WOULD SEND YOU $6 IN DOLLAR BILLS TO GET GOING--YOU HAVE NOTHING TO LOSE !!

** We will monitor the program and if we find you have cheated by not sending your money to your five recipients, we will just dump you out of the system. Come on folks, let's work together and make this work for everyone.

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH.

Please remember to declare your extra income. Thanks once again...

Gary:

Are you familiar with Rhapsody, which Apple just bought and is
(surprise!)
making an open system?

I just spoke with a friend who was on the development team and who may
consult with
Apple, he says it is a genuine competitor to Windows95, will quickly
replace Linux (it's
free as well), and is a wonderful operating system to work with.

Guess the amateur radio fraternity will need to get ahold of it if it is
to become practical -
sort of like Lojack, cell phones, etc., etc.

Intriguing! :-) 73, DavidC AA1FA

The Novice/Tech question pools have been expanded by 50%, and a new
section on RF exposure has been added, so the old Q&A book will lack the
new questions. All but 11 of the old questions are still in the pool, however,
so knowing how to answer them is still useful, just no longer sufficient. Buy
the new book. It will also be useful to get a copy of "The FCC Rule Book"
and the ARRL Handbook. Read through the rule book to understand
regulatory matters, and read through the basic electronics chapters of
the Handbook to get a grasp for the technical questions. The Q&A book
is good for focusing you on what you have to know to pass the test, but it'll
be a lot easier to pass the test if you understand what you're supposed to
know too, IE it's easier to learn the principles than it is to memorize the
question pool.

Source record: 186192

Oh....wow....that's all very interesting. What is the point?

Anyway, 75m is like that all across the band. Ever listen to 3853 or 3950? That makes the frequency you spoke of look like a kid's nursery. At least on that one, you rarely hear profanity from the normal inhabitants.

If the word "Shit" is so offensive to you, you're going to have a heart attack in short order if you spend ANY time listening around on 75m, or on 20m or 40m for that matter.

I'm not saying that this is by any means a good situation, but what is huge revelation to you is not news to most of us who spend any time on HF. And no, the FCC is not in the amateur radio business anymore in terms of rules enforcement. It appears that this may be big news to you as well. If I ran the FCC with extremely limited resources, ham radio would be just about last on my list, given everything else that's going on.

If amateur radio were strictly an appliance operator's hobby, like CB,
with a strict Type Acceptance requirement for transmitting equipment,
then your position would have some merit. But amateur radio is chartered
to foster electronic experimentation and technical self-education through
hands-on activities involving transmitting equipment which has not passed
strict Type Acceptance. Therefore a minimum technical competence for
the operator must be ensured to avoid unnecessary interference caused by
misbehaving or maladjusted equipment. In addition, a familiarity with the rules
and regulations is required to be demonstrated to remove the excuse "I didn't
know" from the vocabulary of those who operate contrary to those regulations.
These are reasonable and justifiable requirements.

OTOH, there is no longer reasonable justification for a Morse speed test.
It no longer serves a valid regulatory purpose with the end of Morse usage
by life safety services. There is no longer a need for interoperability between
stations in that service who were only capable of using Morse, and amateurs
who cause them interference. IE in elder days, it was necessary for amateurs
to understand Morse so that stations in the life safety service would be able to
order them to cease interference with their activities. That has been mooted
by two factors. One, the separation of amateur and life safety frequencies,
and two, the abandonment of Morse by life safety stations. Thus Morse speed
testing is a relic of another era when there was some justification for its
presence.

And even that may not save you. Some years ago, the FCC and Coast
Guard raided a pirate broadcast ship operating in international waters.
Somehow in the process of the raid, the ship sank. I doubt this was
accidental.

The US has recently shown that it has little or no regard for international
law, or for the soverignty of other nations. It routinely captures ships of
other nations in international waters (which under international law is an
act of war). It has kidnapped foreign nationals in foreign nations. It has
even assaulted a friendly foreign power and kidnapped its head of state.
Only if it faces military opposition which make its actions too costly does
it refrain from acting. So you shouldn't expect international law to protect
you unless you have the military might to back it up, IE you'd better be
under the protection of a nuclear power with the capability of obliterating
Washington. Anything less doesn't seem to restrain the arrogance of
power there.

This could be a pirate, but it is more likely to be an image of a station
operating in the newly opened segment of the AM band. Take your
receiver's IF frequency, double it, and add it to the station frequency.
Then listen up there. The 5 kHz offset from normal channels could be
due to a slight mistuning of your receiver IF which wouldn't be noticed
on direct reception.

Well, how do you propose to stop this jerk (and all the other arrogant
jerks) out there? Would you volunteer to go to their homes and tell
them to shut up? You would probably get shot for your trouble, or at
least get sued for harassment. If the almighty federal government
isn't interested in stopping these people, what do you think the
ordinary Ham can do?

> The use of profanity, however,
>was indeed an infraction.

Scott, I could see this coming for a long, long time. The FCC tried to enforce against profanity on the west coast long ago. It did not work. One only has to listen and hear this "profanity" go on and before long others repeat it because of no penalty. It sounds awful bad, but I am afraid there is little to be done as the high courts have muddled the profanity picture

.> Seems to me
>there were nominally a dozen violations made in that 10-
>minute period.

Without a doubt! Of course these hams don't really care, it is still difficult to do any activity without breaking some kind of rule. Like driving a car, how many of us speed, make illegal turns, etc., etc.

Good to see that you are watching all this and calling it to people's attention, Scott, but I cannot see any improvements in the near future.

3322. CW vs SSB

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-21 00:00:00 UTC
From: Phil Heaton <ke4krt@atl.mindspring.com>
Message-ID: <3475EC01.54AC5A62@atl.mindspring.com>
Source record: 186202

Subject: [CW] The accident

I heard about an accident that occured between a CW Man and a SSB Man, and thought you might be interested in what happened:

A few weeks ago a CW Man and a SSB Man were driving their cars in the middle of the night on a dark and lonely road. They were both in a hurry and going very fast. They were heading toward each other and there was no other traffic. For no reason whatsoever, they simply ran into each other and caused a horrible crash.

After dragging themselves from their totally wrecked cars, they both surveyed the damage. The SSB Man said to the CW Man: " It is amazing that we survived this crash! This must be a sign that we should put away our differences and be friends from now on."

The CW Man said, while looking at the twisted wreck of his automobile:"You are right. I am going to see if anything survived this crash." And with that, the CW Man pried open the trunk of his car and found an unbroken quart bottle of Jack Daniels.

"Look at this," the CW Man said, "This bottle did not break. Certainly this is a sign that we are supposed to be friends. Let's drink a toast to friendship." And, with that, the CW Man handed the SSB Man the bottle.

The grateful SSB Man took the bottle, put it to his lips, and without stopping, drank almost one-half of the quart of whiskey. He then stopped drinking, took a deep breath and and handed what was left of the whisky to the CW Man, and said "Here friend, your turn."

"Naw," replied the CW Man, "I'll save mine until after the police get here."

Saw this and loved it.

the band UHF and above may be sold to commercial guys pretty soon...
say around 2.3 GHz band. no one is using this band, but some are
interested in using this (MOTOROLA has 1.9 GHz PCS etc.)

as for HF, I doubt that the government takes away the band. There
are so many international hams + who wants to double up with them ??

SB QST @ ARL $ARLB071
ARLB071 Ballots decide directors races

ZCZC AG71
QST de W1AW
ARRL Bulletin 71 ARLB071
From ARRL Headquarters
Newington CT November 21, 1997
To all radio amateurs

SB QST ARL ARLB071
ARLB071 Ballots decide directors races

The ARRL Great Lakes Division will have a new Director starting January 1. Joe Falcone, N8TI, of Livonia, Michigan, defeated incumbent Director George Race, WB8BGY. The vote was 4477 to 2531. The ARRL Committee of Tellers for the election of directors and vice directors for the 1998 through 1999 term met November 21 at ARRL Headquarters to count ballots.

Race served as Great Lakes Division Vice Director before assuming the Director's position in June of 1995, when former Director Al Severson, AB8P, resigned (Severson died in September 1997). Race was elected to a full term as Director in 1995.

Falcone, 48, is a tax litigation attorney and ARRL life member.

Current Great Lakes Division Vice Director Dave Coons, WT8W, was unopposed for re-election.

In the Delta Division, incumbent Director Rick Roderick, K5UR, of Cabot, Arkansas, outpolled Malcolm Keown, W5XX, of Vicksburg, Mississippi, 2106 to 1330. Roderick is an attorney. Delta Division Vice Director Henry Leggette, WD4Q, had no opposition.

In the Atlantic Division, incumbent Director Kay Craigie, WT3P, of Paoli, Pennsylvania, easily beat back a challenge from Jim Carson, WK2K, of Ithaca New York. The vote tally was 4918 to 1573.

Atlantic Division Vice Director Bernie Fuller, N3EFN, was without opposition for his seat.

Candidates in four other ARRL divisions also faced no opposition and were declared elected. Uncontested candidates were:

In the Dakota Division, Director Tod Olson, K0TO, and Vice Director John ''Jay'' Bellows, K0QB. (Current Vice Director Hans Brakob, K0HB,

decided not to seek re-election.)

In the Midwest Director Lew Gordon, K4VX, and Vice Director Bruce Frahm, K0BJ.

In the Pacific Division, Director Brad Wyatt, K6WR, and Vice Director Jim Maxwell, W6CF.

In the Southeastern Division, Director Frank Butler, W4RH, and Vice Director Evelyn Gauzens, W4WYR.

Terms of office for successful candidates begin January 1, 1998.

Thank you for posting this Steve. I am glad that you have assumed the solemn responsibility to try to make each and every amateur radio operator in this newsgroup aware of the fact that he is facing certain death. We should strive to face these facts as men, and not cower from our eventual demise. It is a bitter pill to swallow, but we must recognize the handwriting on the wall. We must face the fact that living life the way we do has it's cost; and the cost is that we can expect to suffer the same fate as so many of those who have gone before us.

We should not deceive ourselves by denying the abundance of irrefutable evidence. But it is nevertheless important that we maintain our composure, and not run around screaming "We're All Gonna Die!......MOMMY!!!

It would be far more respectible to laugh in the face of death, like:
BWAAAAHAHAHAHAHA!

Looks like you snagged a few Steve. :-)

Anyone have any experience using the MFJ Super Hi-Q loop (10-30 MHz)
or the 40-15M version? I have one of the original AEA Isoloop antennas,

so I have some experience using small transmitting loops....I am
considering purchasing an MFJ loop, but would like some feedback from
Hi-Q loop
owners first....

Also, any info on other manufacturers of small loops? My main goal is
to get on 40 and 30 meters...since I already have the AEA loop covering
20-10...

thanks 73

Already people on alt.radio.pirate and the FRN Grapevine (http://www.frn.net/grapevine/) are talking about blowing up yourself and your station to avoid FCC raids, killing agents, etc. Not only that, some

militia types are talking about defending free radio broadcasters. The govt may soon have a real guerrilla war on its hands. And I know I'll be flamed, but even though I'm dedicated to nonviolence, I may have to go out and fight alongside the free radio people and the militia. I simply can't stand by and let our arrogant govt run roughshod over the rights not only of US citizens but of the whole world. The US government has a comeuppance coming, and it won't be pretty.

It doesn't matter how amateur radio is chartered. You can say that amateur radio is for X, but if a majority of people don't do X but they are licensed anyway, and the FCC supports their licensing, then the FCC is stating, by its actions, that X really isn't a required aspect of amateur radio.

The fact that amateurs CAN build their own equipment is irrelevant, because the vast majority of hams today don't build their own equipment. Since most other radio services have long since abandoned building their own radio gear, and now rely totally on commercial gear, why should amateur radio continue this archiac, outdated practice of soldering? How many more thousands of burned fingers must there be before the requirement is lifted?

While some requirement should probably exist in the regulations to exclude certain categories of amateur operators from building their own radios, there is no compelling reason to require hundreds of hours of electronics theory study -- nothing more than a hazing ritual -- to be completed by people who just want to operate their radios.

Your current license was issued 11/29/88. If that was a renewal, then
the original was issued 5 years previously (or a multiple of 5 years
previously). Given its position in the sequential system, I would expect
it to have been a first renewal on that date. That would say you were
originally licensed on or about 11/29/83.

ITS can research this for you (for a fee). You can contact them at
the FCC Gettysburg address.

I calculated it out, and it could be WJDM, 1660, Elizabeth, NJ (IIRC). I would be suprised that it would be creating an image in Minnesota, but he said that he regularly gets signals from Omaha, so it could be WJDM.

3338. Tube transmitter Kits!!

Newsgroup: rec.radio.amateur.misc

Have a look at the Vintage Radio Kit Co. Web Page!!

http://www.mnsinc.com/bry/vintage.htm

See the new REGEN receiver and BREADPAN antenna tuner kits!

Who ever said kit-building was dead? Read all about the 5 watt Giant,
the "Cake Pan CW 5."

Cool stuff IMHO!

Wanted: Saber III, Systems Saber or HT-1000 (16/32 Channel w/Scan Option).
Radio must be in 470-512 Mhz range.

Currently in possession of an 8 Channel HT-1000 470-520 Mhz and would like
to trade towards (radio and payment or some other terms) one of the above
radios or if possible convert my 8 channel to a 16 Channel. Any info would
be greatly appreciated.

Thanx. Please contact via E-mail.

Ron

The new trend is to get an operating system that works, not to sucker clients into spending 20's of thousands of dollars each upgrade. Of course the managers get their way and an upgrade about ever six months. That causes problem because now the saved files are not compatible with the oid ones. And who sells most of the desktop packages (Duh, Gates, Wintel).

Walt sezz:

> If it continues to be used for CB-like purposes, it will be sold off
> to the highest bidder anyway.

Your reasoning is only slightly flawed, Walt :-)

If money and commercial use is the abiding issue...
Actually, most CB regulations allow and encourage business
communications. And there is substantial business communication
happening on CB. Amateur regulations prohibit business use.

No one would ever try to purchase and take over the 26.0 to 27.99 MHz
part of the spectrum. It would be a silly and hilarious joke. They know
the 11meter operators will never go away.

On the other hand, it would be easy to buy the spectrum and take over a
ham band. It's already happened.

Therefore, we need to encourage more CB-type operation on the amateur
bands, right? :-)

Maybe we should start an international
Spectrum Fund for "Recreational Users".
Instead of worrying about losing freqs through regulations,
we can just purchase the bands, lock-stock-and-barrel!

As far as I know, no way to tell other than to test it. The marked freq is for the circuit it was intended to operate in. That could be series or parallel. If parallel, you need to know the capacitance as well.

Obviously you never have to work away from the office. Laptops are one of the
best tools since the invention of the computer. They allow you to bring the
power of the computer out into the field, and that's necessary for those who
aren't cubicle drones.

> BTW, the only programs I have seen that would totally screw up under DOS used
>Pharr-Lapp DOS extenders. Almost all of my DOSware and w3.1 stuff is adequate
>to task. The only reason I have for using 95 or NT is because I am forced into

>just had to have the latest $5,000.00 CAD package or something.

The need to run 32 bit applications is a powerful incentive to switch
operating systems. A 16 bit OS *needs* third party extenders to run
today's more powerful programs, and as you note, those extenders
cause problems. A 32 bit OS doesn't need those things, and lets you
consistently use large model programs. Win95 and NT also offer
real multitasking, and allow the cooperative use of a suite of programs
to attack a problem. That multiplies your efficiency compared to a single
tasking system's more limiting linear approach.

I must echo Bob's remark that Win95 handles unruly DOS apps
much better than Win 3.1 did, and sometimes better than DOS
itself did. And of course it runs 32 bit apps that Win 3.1 can't.
That doesn't make me a *fan* of Win95. I much prefer Linux.
But I can't get all the apps I want to run to function under
Linux (yet), so I'm stuck with having to have a Microsoft OS
available. And if I must use a Microsoft OS, I much prefer Win95

to Win 3.1.

What I *hate* about Windows (of all varieties) is the way it tries
to *hide* things from the user. With Linux, everything is out in
the open. When the disk mysteriously rattles, you can look and
see what's going on. With Windows, it is often a mystery.

>The skill of touch-typing is very similar to the Morse skill.

There is a *slight* similarity with respect to *sending*, though
reception is a different matter. However, one needn't know
how to type to use the internet. Programs such as IBM's
Simply Speaking, now offer you the option of voice input
and output to your computer. (And of course things like
internet phone let you converse with others directly.)

>In fact, my maximum CW speed and typing speed at one time were almost

>(where all the DXers work) was the fix.

Heh, heh. My typing rate is about 120 WPM while my Morse rate hovers
below 20 WPM. I seriously doubt I'll ever be able to get the latter up near
the former. Nor is there a good reason to do so since no one could copy
it that fast. But people can *read* text much faster than that.

As a reporter, I think I would be questioning the need for "heavily armed"
anything when arresting someone for what is, effectively, a white-collar
crime. Did the FCC and "legal authority" think these "pirates" had
fully-automatic assault transmitters?

I think you are probably right. And as I have no sympathy for pirates, I'm
tempted to cheer. What restrains me from that is the paramilitary tactics
that government agents have adopted against US citizens not charged
with violent felonies. That is very disturbing and provocative. The
government has chosen to escalate matters to the status of making war
on its citizens, and that is very likely to provoke a war-like response.
(And in fact it has, witness the assault on Mt. Carmel and the response
in Oklahoma City.) The government is inviting guerrilla war with its
tactics, and it is plain that there are those out there willing to respond
to that invitation. Whatever happened to the FCC field agents in suits
who used to politely knock at the front door? I suppose that they are
casualties of the War on (some) Drugs which started this trend of
using paramilitary assualts against non-violent American citizens.

Nor has he done so, but he does speak for the FCC on amateur radio matters.
And amateur radio is subject to the FCC. The ARRL would like us to think that
amateur radio is subject to their will, but they don't have the power to enforce
their will, the FCC, as the agency charged with controlling public spectrum,
does.

Gary:

As one who has done so, I hope that everyone who is concerned is out there helping to elect people who reject this methodology - and that they themselves VOTE! Change in our political system requires participation (so said those who built the system).

I had no money, power, connections, or family influence to start - after volunteering and getting it done in one campaign, I was invited to a paid role in many others (and for a time served as a consultant and as a chairman of a county-level party organization) - and I helped to recruit and elect some good people (and to unelect others who didn't get it).

Sure wish others would take the time, put their energy and money into the process, and help to change things! I am no longer as active, but I sure do stay informed and vote. When good people don't participate, bad people have a free reign.

This is true for the future of Ham radio, freedom of speech, and many other freedoms that many in government believe we should not have. Sure wish I could figure out who to support in 2000! :-)

I know the machine well. I had the origional T-1500 mono version back in the early '60's and used it to record many a radio remote concert. We used it until the early '80s and recorded many of the origional Westlink Radio Network news (now Newsline) reports on it and a companion Revere T-700D. All I have left of either is a microphone!

As far as I am concerned, the Wollensak machines were far ahead of their time. A broadcast quality tape recorder (of that era) that anyone could afford.

Trouble, let me get this right, this means that we should discourage HF by requiring the knowledge of CW, thus forcing more code-less operators into occupying more UHF and microwave spectrum.

Thus, we will protect our bands from encroachment!
Now we understand.

I thought you AMSAT guys were rocket scientists & stuff (i.e. intelligent, decent people), not white-trash that spam Usenet newsgroups with commercials! Perhaps Vinnie is the exception, but anyway, these frequent AMSAT spams (in particular, to groups like rec.radio.swap/shortwave & scanner) tend to reflect poorly on AMSAT, not just Vinnie...

>(I checked the ARRL site to no avail.)

As I recall, McElroy was the champ at 73 WPM (incredible coincidence, eh).
That was years ago. I haven't heard of any more recent speed champion.
Conducting speed contests appears to still be a popular activity in Europe,
but be aware that they measure speed in characters per minute rather than
in words per minute, so their numbers are 5x those we use in the US.

Note, it is *copy* speed, not sending speed, which is what is measured
in these contests.

Hi Jim,
What bothers you about my posts? The number of them, or their content?
It can't be the number - a quick check of the archives reveals I'm not
even in the top 30, so it must the the pro-code content of them that
irritates you. Fine, feel free to debate me and show me that I'm wrong
in my beliefs (on .policy, not here - .policy was created specifically
to take the code debate off .misc).

>Compulsive posting is often the result when
>the sheer boredom of life causes a person to spend all of their time reading
>newsgroups. The analogy to a junkie is striking.

I spend more time sailing, fishing, swimming, or building radios during
the week than I do on internet, so again, it must be your irritation
with my code stance that is stirring you up.

>The OFF switch is so close, yet so far. Reach out to it, save yourself.
>Shut that sucker off and go outside. Today is the first day of the rest of
>your life.

I was in the water (a chilly 78 degrees) at 5:45am this morning, swam two
kilometers, then biked to campus and taught a 7:30 and 8:30 class. You
were probably just getting out of bed by the time my work-day ended.

Gotta go scrub the boat and stitch a sail - ripped the genoa last weekend.

73 from Hawaii,
Jeff KH2PZ / KH6

P.S. You speak of "compulsive posting" when instead you should educate us
in regards to compulsive reading - you seem to be an expert in that area.

There are indeed many legal broadcast stations operating with-in "ham bands."
There are very few frequencies where we have even Primary allocation, let alone
the Exclusive allocation you apparently assume.

Yes, this was/is interesting. I subscribed and read it for a while, but got to the point of just skimming, and sort of noticed the notice of the charge, but didn't take it too seriously. So when I got an official notice, I thought they were kidding, and me and somebody in charge had a bit of a heated private exchange. Of course I unsubscribed -- hadn't been reading it in depth for some time, so why pay? :-)

Supposedly, said this correspondent, "this is the trend" as universities and such traditional listservs want to recoup their costs. That was a few years back, and I have yet to be hit by fees for about five other lists I subscribe to. Some fast-moving trend, eh?

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #243 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 28-Nov:
-
1. FCC Releases Supplement "B" of OET Bulletin 65
2. ARRL Announces Results of Division Director Elections
3. Work Continues in Arizona on ASUSAT
4. Special Event Station Calendar
5. WRC-97 Comes to a Close in Geneva, Amateurs Mostly Unhurt
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Weekly Propagation Forecast
8. NLI SM Recall II: New Attempt to Oust Len Buonaiuto, KE2LE
9. Sputnik 40/PS2/RS-17 by Any Other Name Still Being Heard
10. DOVE-OSCAR-17 "S" Band Transmitter Activated
11. Shuttle Columbia Carries Test of New Battery Technology
12. Feds Propose More On-line Forms, FCC Just the Beginning
13. Intel Confirms Newest Flaw in Pentium Processor Chip
14. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of Willits
Ridge, California, where "This Week in Amateur Radio" is heard
Wednesdays at 7:30 PM in San Bernardino, Riverside, and Orange
Counties on the KA6DLX repeaters on 146.265/446.475 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
satellite uplink.
-
On the WorldWide Web, program audio can now be found in several
```

formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

Unless it is released with full source, and a large independent development community forms around it, I sincerely doubt it will replace Linux. What makes Linux valuable, besides the fact it is a POSIX compliant unix and hence has a very large knowledge base to draw on, and will run thousands of very good freeware programs, is the fact that full source is freely available, and there is a large independent development community for it. That means bugs are fixed quickly, and drivers for new hardware are quickly available for it. And if you have a unique need, you can hack it yourself.

AT&T recently released Inferno. And that is a very interesting next generation operating system. But it hasn't yet gathered a large independent development community, and there aren't thousands of ready to run programs for it. So it has just sort of lain there. I suspect Rhapsody will suffer a similar fate, though I don't know anything about it yet and that might be a rash prediction.

WRC-97 WRAPS UP IN GENEVA

The 1997 World Radiocommunication Conference concluded its talks in the early morning hours of November 21 in Geneva, Switzerland. Amateur Radio survived WRC-97 largely unscathed, but the stage has been set for renewed spectrum battles at WRC-99.

The Little LEOs (non-voice, non-geostationary mobile satellite interests)--which put a huge scare into the ham radio community in 1996 with their proposals to share ham radio VHF and UHF bands--were unable to muster much support for new allocations at WRC-97. However, they came away with up to 3 MHz of additional spectrum on a regional basis, in the bands between 454 and 460 MHz. The Little LEOs also got a resolution calling for urgent studies in preparation for WRC-99--what some at the conference called "a hunting license" for additional VHF/UHF spectrum. A second issue that will

recur at WRC-99 is finding a place in the 420-470 MHz frequency range for the Earth Exploration Satellite Service (EESS). Synthetic aperture radars (SARs) using frequencies in this range are said to be capable of penetrating the rain forest for mapping purposes.

Two significant ham radio-related issues failed to make the cut for consideration at WRC-99. For budgetary reasons, the WRC-97 delegates had to limit the WRC-99 agenda only to the most urgent issues. Pushed back to the tentative agenda for WRC-2001 were the possible realignment of the 40 meter band to resolve a conflict between hams and broadcasters in part of the band (along with possible expansion of broadcasting bands between 4 and 10 MHz), and Article S25 of the international radio regulations. Article S25 contains the international regulations specific to the Amateur and Amateur-Satellite Services, including the Morse code requirement for operation below 30 MHz.

WRC-97 delegates approved a resolution encouraging administrations to facilitate the use of ham radio and other "decentralized means of communications" for disaster mitigation and relief operations. This resolution eliminated the need for Resolution 640, which defined how certain ham bands could be used for international disaster communications by non-amateur stations, so Resolution 640 was suppressed.

WRC-97 delegates did agree to upgrade the Earth Exploration Satellite Service from secondary to primary at 1215 to 1300 MHz, which should have only minimal impact on amateur use of 1240-1300 MHz. The presence of EESS there also reduces the possibility that other, less-compatible services might later be introduced into this band.

In other allocations decisions, amateur satellite segments were not included among allocations for wind profiler radars. Except for a worldwide primary allocation at 1270 to 1295 MHz, the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis. Region 2 administrations were urged to implement wind profilers in radiolocation bands at 440 to 450 MHz, 904 to 928 MHz (protecting the lower, weak-signal segment), 1270 to 1295 MHz (protecting amateur satellite and weak-signal), and 1300 to 1375 MHz. The delegates agreed that the bands 420 to 435 MHz or 438 to 440 MHz could be considered for use in situations where there was incompatibility between wind profiler radars and other radio applications at 440 to 450 MHz or 470 to 494 MHz (only in some Region 1 countries). In this case, too, the amateur-satellite segment is protected.

Several Region 1 (primarily European) countries deleted footnoted exceptions to the international table of allocations in the 1810 to 1830 kHz range, expanding the usability of 160 meters for ham radio. North Korea was persuaded to drop its bid for footnoted exceptions to the allocations table that could have affected some ham radio bands in that part of the world.

Amateur Radio was represented at WRC-97 by a multinational team of International Amateur Radio Union officials, including Secretary Larry Price, W4RA, Vice President Michael Owen, VK3KI, and Region 1 Vice Chairman Wojciech Nietyksza, SP5FM. They were assisted for a time by Tafa Diop, 6W1KI, and Eduardo Estrada, HC2EE, who are members of their respective

regional executive committees. Numerous radio amateurs attended the conference in official capacities on behalf of their national administrations, including ARRL Technical Relations Manager Paul Rinaldo, W4RI, who served on the US delegation.

In all, 1801 delegates from 142 countries registered at the conference. Another 141 observers from regional and international organizations also attended.

BALLOTS DECIDE DIRECTORS RACES

The ARRL Great Lakes Division will have a new Director starting January 1. Joe Falcone, N8TI, of Livonia, Michigan, defeated incumbent Director George Race, WB8BGY. The vote was 4477 to 2531. The ARRL Committee of Tellers for the election of directors and vice directors for the 1998 through 1999 term met at ARRL Headquarters November 21 to count ballots.

Race served as Great Lakes Division Vice Director before assuming the Director's position in June of 1995, when former Directer Al Severson, AB8P, resigned (Severson died in September).

Falcone, 48, is a tax litigation attorney and an ARRL life member.

Current Great Lakes Division Vice Director Dave Coons, WT8W, was unopposed for re-election.

In the Delta Division, incumbent Director Rick Roderick, K5UR, of Cabot, Arkansas, outpolled Malcolm Keown, W5XX, of Vicksburg, Mississippi, 2106 to 1330. Roderick is an attorney. Delta Division Vice Director Henry Leggette, WD4Q, had no opposition.

In the Atlantic Division, incumbent Director Kay Craigie, WT3P, of Paoli, Pennsylvania, easily beat back a challenge from Jim Carson, WK2K, of Ithaca New York. The vote tally was 4918 to 1573. Atlantic Division Vice Director Bernie Fuller, N3EFN, was without opposition for his seat.

Candidates in four other ARRL divisions also faced no opposition and are considered re-elected. Uncontested candidates were:

* In the Dakota Division, Director Tod Olson, K0TO, and Vice Director John Bellows, K0QB. (Current Vice Director Hans Brakob, K0HB, decided not to seek re-election.)

* In the Midwest Director Lew Gordon, K4VX, and Vice Director Bruce Frahm, K0BJ.

* In the Pacific Division, Director Brad Wyatt, K6WR, and Vice Director Jim Maxwell, W6CF.

* In the Southeastern Division, Director Frank Butler, W4RH, and Vice Director Evelyn Gauzens, W4WYR.

Terms of office for successful candidates begin January 1, 1998.

FCC ISSUES RF SAFETY SUPPLEMENT B TO OET BULLETIN 65

Hams now have basic guidelines and tools to evaluate their stations for compliance with the FCC's RF exposure guidelines that start phasing in January 1, 1998. The FCC's Office of Engineering and Technology issued the long-anticipated Amateur Radio Supplement B to its OET Bulletin 65 on November 18. The FCC worked closely with the Amateur Radio community to develop the new supplement. Several ARRL Headquarters staff members and Technical Advisors reviewed preliminary drafts of the supplement. ARRL Lab Supervisor Ed Hare, W1RFI, has been the League's point man for RF safety and exposure issues.

"It has been my pleasure to work with the FCC staff and the amateur community in finalizing Supplement B," Hare said. "All who have been part of this process deserve the thanks of the entire amateur community."

Supplement B, entitled Additional Information for Amateur Radio Stations, contains detailed information specific to ham radio stations. It is designed to be used in conjunction with the FCC's OET Bulletin 65 (Version 97-01), Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields. The revised Bulletin 65 was issued earlier this year. Supplement B covers definitions of RF radiation and discusses the FCC exposure guidelines and their applications, methods of predicting human exposure, estimating compliance distances, and controlling exposure to RF fields. The supplement runs approximately 70 pages. Among its noteworthy highlights are numerous easy-to-use tables based on various frequencies, power levels and antenna configurations to help hams determine whether their stations comply with the FCC's published RF exposure guidelines. Most tables show compliance distance--the distance that an antenna needs to be located from areas of exposure to be in compliance. (For a closer look, see "FCC RF-Exposure Regulations--the Station Evaluation," by Ed Hare, W1RFI, which will appear in the January issue of QST.)

The new RF exposure rules go into effect January 1, 1998 for all new stations and for those filing a Form 610 with the FCC after that date. Existing stations have until September 1, 2000 to comply with the new rules. But, existing stations making changes that could affect RF exposure from their station--such as increasing power or relocating antennas--must evaluate that change if done after January 1, 1998.

As first announced, the FCC set a power threshold of 50 W to trigger the need to do a station evaluation. In late August, the FCC revised the power level thresholds to trigger a routine Amateur Radio station RF exposure evaluation. Those changes were welcome news for most hams. The newest guidelines raised its original 50-W PEP threshold on all bands except 10 meters through 2 meters, where it remains at 50 W PEP. The FCC went along in part with an ARRL request and established a sliding scale for threshold levels dependent upon frequency. The revised thresholds (all PEP) are 500 W for 160 through 40 meters, 425 W on 30 meters (the maximum legal power is 200 W), 225 W on 20 meters, 125 W on 17 meters, 100 W on 15 meters, 75 W on 12 meters and 50 W on 10 meters. The threshold for all VHF bands is 50 W. On UHF, the threshold level is 70 W on 70 cm, 150 W on 33 cm, 200 W on 23 cm, and 250 W on 13 cm and higher frequencies.

The threshold for amateur repeaters is 500 W effective radiated power (ERP) if the repeater antenna is located on a building or is less than 10 meters above ground. Stations operating at or below these respective power levels are categorically excluded from having to conduct a routine RF radiation evaluation. Mobile and portable (hand-held) devices using push-to-talk operation generally are also exempt from evaluation. But, all stations--regardless of power level--still must comply with the RF exposure limits that become effective New Year's Day.

OET Bulletin 65 and the new Supplement B are available at http://www.fcc.gov/oet/info/documents/bulletins/#65. Copies are available from International Transcription Service Inc, 1231 20th St NW, Washington, DC 20036; tel 202-857-3800; fax 202-857-3805.

FLORIDA HAMS RESPOND TO SURPRISE TORNADO

Just after midnight on November 2, the beachfront community of New Smyrna Beach, Florida, was struck without warning by a tornado. The storm, rated by the National Weather Service as an F2 twister, carried winds in excess of 150 MPH. Damage surveys estimated more than 350 structures were damaged or destroyed, and 32 people were injured--a half dozen or so badly enough to require hospitalization. Remarkably, no one was killed, but some 200 residents were forced to seek refuge in shelters, hotels or with family and friends.

The surprise storm was a bit of a wake-up call for The Central Florida ARES and RACES teams, which had been lulled into complacency by a rather inactive hurricane season.

Volusia County ARES EC Bill Crandall, KM4AE, and his wife, Mary Ann, KD4MSD, activated the Volusia County Amateur Radio Emergency Communications Service (VARECS) and had the emergency operations center operational by 6:45 AM on November 2. An emergency net soon was humming on the 147.24 MHz repeater. Within a couple of hours, Amateur Radio priority traffic began flowing between the Daytona Beach Red Cross and the New Smyrna Beach ARC field disaster site service center. Telephone communication also was established with the New Smyrna Beach Sheriff's Office to verify and update damage reports. In addition, damage reports were funneled through Air Force MARS channels to FEMA.

By noon, a working communication plan was established between Red Cross Communications Director Paul Branch, K3NON, and KM4AE. All East Central District County ARES teams responded to a call for outside support. In all, KM4AE reports, 54 hams--including two ARRL PIOs--volunteered their services to help in the tornado damage assessment and recovery effort. "Our working relationship with the Red Cross communications director was excellent," Crandall said. Hams actively provided communication service for more than 156 hours between November 2 and November 8.--Bill Crandall, KM4AE; Michael Welch, KF4HFC; Norman Lauterette, WA4HYJ

ARIZONA QRMer TO PAY UP

Hams in Arizona are cheering, now that a man fined by the FCC for malicious interference and other rules violations has finally agreed to pay up. Last

year, the FCC fined Timothy Harold Hoffman of Phoenix $6000 for repeated violations, including interference to Phoenix-area repeaters. The violations were called to the Commission's attention by the Arizona Repeater Association's ARRL-sanctioned Local Interference Committee. Hoffman was cited for five specific violations, including transmitting on ham frequencies without a valid operator or station authorization, and willfully and maliciously interfering with ham radio communications. But, as Lance Halle, KW7LH, tells it, "it took a multitude of long distance calls by committee members, support from FCC personal, input from Congress, and the White House, to get a Notice of Forfeiture and then a federal court judgment" against Hoffman, which he called "one of the major interferers."

"The system does work," Halle said in alerting the ARRL to the October 26 judgment by US District Court judge Robert C. Broomfield. Hoffman will pay off his fine in increments of $200 per month. "Spread the word! Maybe this will deter some of the would-be interferers."

TEXAS HAMS CLAIM ANTENNA ORDINANCE VICTORY

Hams in Greenville, Texas, succeeded recently in getting ham radio antennas and towers exempted from a local telecommunications facility ordinance. Members of Greenville's Sabine Valley Amateur Radio Association were claiming victory in getting the City Council to reject a Planning and Zoning Board ruling that would have kept ham antennas in the ordinance.

SVARA President Art Passannante, KC5GQP, cited ARES EC Gary Hall, KB5LWZ; Orin Forrester, KC5LAI; Fire Chief Robert Wood; Assistant ARES EC Danny Ussery, N5VKM, "and many others" for their role in getting the ordinance rewritten favorably for ham radio. Passannante also thanked the ARRL for helping his club to obtain the reference materials it needed to prepare its presentations to the local governing bodies. "The exemption will serve as a model for a larger section-wide ruling," Passannante said.

NEW WEST TEXAS SM ELECTED

Charles C. Royall, WD5CJI, of San Angelo, Texas, will be the new West Texas Section Manager. Royall received 84 votes in a three-way race for the position. Ted Harwood, KB5VWC, got 44 votes, while Fred Marble Jr, W6VPI, got 53 votes. The term of office begins January 1, 1998. Royall succeeds Amelia "Milly" Wise, W5OVH, of El Paso.

Section Manager candidates in seven other sections, all incumbents, were not contested and were declared elected. They include: In the Delaware section, Randall Carlson, WB0JJX; in the East Bay Section, Bob Vallio, W6RGG; in the Michigan Section, Richard Mondro, WA4FQT; in the New Mexico Section, Joe Knight, W5PDY; in the Santa Barbara Section, Robert Griffin, K6YR; in the Tennessee Section, O.D. Keaton, WA4GLS; and in the Western Massachusetts Section, William Voedisch Jr, W1UD.

Since no petitions were received for the Alabama, Alaska, and Kansas section manager elections by the September 5, 1997, deadline, nominating petitions will be resolicited in January QST.

SOLAR UPDATE

Solar prognisticator Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was up a little this week compared to last, and geomagnetic conditions were quiet. The average solar flux for the previous 90 days rose one point to 91, and the solar flux was above these numbers every day this week. This indicates an upward trend. The 90-day average was 5 points lower only a month ago.

Solar activity is expected to remain high, with solar flux values over 100. An active area (region 8100) is expected to return November 23, and this may send solar flux to the 110 mark from November 26 to December 1. Flux values are not expected to drop below 95 until December 10. This region, which produced X-class solar flares on November 4 and 6, may produce M-class flare activity this time around. Watch for active geomagnetic conditions around November 20 to 24 and again around December 3.

The 10 and 15 meter bands should open during the day with higher solar flux values. The best conditions, with high solar flux and low geomagnetic conditions are currently forecast for the CQ Worldwide CW DX Contest on the weekend following Thanksgiving.

With solar activity higher, it is fun to watch the progress of cycle 23 with a plotting program which graphs the daily numbers over time. Check out the Solar Data Plotting software from WA4TTK on the web at http://edge.net/~scraig/. This program automatically grabs the solar data from this weekly propagation bulletin to update it's database. If you need to fill in gaps in your data, grab old propagation bulletins from the ARRL web site at http://www.arrl.org/w1aw/prop/1997-index.html.

Sunspot numbers for November 13 through 19 were 41, 48, 35, 58, 74, 71 and 62, with a mean of 55.6. The 10.7-cm flux was 90, 93, 96.2, 96.2, 94.2, 91.5 and 96.5, with a mean of 93.9, and estimated planetary A indices were 4, 11, 7, 9, 7, 9, and 3, with a mean of 7.1.

IN BRIEF:

* This weekend on the radio: There's a break in major contest action this weekend. The next major operating event is the CQ WW DX Contest (CW), November 29-30. See October QST, page 107, for details.

* Correction: The correct URL for the WRC club site is http://www.itu.int/radioclub/ .

* SAFEX II reported operational: Reports indicate that the SAFEX repeater aboard the Mir space station has been operational, but it's not known for sure if the repeater is back on to stay. AMSAT's VP International, Ray Soifer, W2RS, reports he worked KB2ETV on November 9 using a dual-band hand-held and a half-wave whip. Soifer said the downlink was quite active at the time with many stations calling. For those not familiar with the transponder, SAFEX II's input frequency is 435.750 MHz (CTCSS tone is 141.3 Hz), and its output is 437.950 MHz. Both frequencies are subject to Doppler shift of up to 10 kHz, so users are cautioned to program their radios

accordingly.--AMSAT News Service

* Worldradio on tape: Worldradio magazine is available on cassette tape for visually and physically impaired people for $3 per year. Contact Tom Carten, K1PZU, 1602-A King's College, Wilkes-Barre PA 187111-0801; e-mail tfcarten@leo.kings.edu.--Tom Carten K1PZU

* WX0B forms Array Solutions: Jay Terleski, WX0B, has formed Array Solutions to manufacture and sell the WX0B line of products formerly sold by Dunestar Systems. Array Solutions will warranty and repair all StackMatches sold to date. StackMatch owners are asked to register with Array Solutions to receive product update information. For more information, see http://www.arraysolutions.com/index.htm or write Array Solutions, 350 Gloria Rd, Sunnyvale, TX 75182; tel 972-203-8810; fax 972-203-8811; e-mail wx0b@arraysolutions.com.

* California HANDI-HAM camp set: The next session of HANDI-HAM Radio Workshop (camp) will be held at Camp Joan Mier, Malibu, California, from February 24 to March 1, 1998. This camp will provide ham radio instruction at all levels for persons with severe physical (not learning) disabilities and/or sensory impairments. The 1998 camp is free for California residents seeking their first ham ticket or upgrade. All normal care, food, lodging, and Amateur Radio instruction for the session will be provided at no cost to the campers. For more information, contact Jane Rova, Secretary, Courage HANDI-HAM System, 3915 Golden Valley Road, Golden Valley, MN 55422; tel 612-520-0512; e-mail handiham@mtn.org.

* KC5NTW honored: Jon Spargo, KC5NTW, was honored as Man of the Year for 1997 by the Socorro County (New Mexico) Chamber of Commerce. The award recognized Spargo's numerous community-service efforts, including organizing extensive public observing sessions for Comet Hale-Bopp at New Mexico Tech's Etscorn Campus Observatory, leading a new model-train club that is preserving railroad history artifacts in Socorro, and participating in public-service activities of the Socorro Amateur Radio Association. Safety Officer for the National Radio Astronomy Observatory, Spargo also volunteers for Project ASTRO, a nationwide astronomy-education program that brings science into school classrooms. Spargo received his award from outgoing Chamber President Dave Finley, N1IRZ, at the organization's annual banquet in October.

* KB9FO wins Emmy: The 1997 Technical Excellence Emmy from the National Association of Television Arts and Sciences has gone to Henry Ruh, KB9FO, an ARRL life member. The award, presented recently at a ceremony in Chicago, recognizes his creative engineering work in television remote broadcast units, employing digital TV equipment in new and innovative applications to afford versatility and efficiency to broadcasters.--Henry Ruh, KB9FO

* Club saved at last minute: Jeff Hugabone, N7KBY, reports that the 53-year-old Hampden (Massachusetts) County Radio Association was rescued at the last minute from dissolution and will continue to serve hams in the Pioneer Valley. Following some tense moments and a motion to dissolve the club at its last meeting November 7, a ham, rather new to the area, stepped

up and offered his interest in becoming president. The individual was quickly voted in. Hugabone says it turned out that their new president, a retiree with some time and resources to invest, had led several California clubs in years past. "Following his election, a fervor of activity ensued," Hugabone said, adding that the new president's enthusiasm was contagious and new officers and board members soon were in place. "Sometimes it takes hitting rock-bottom, before the realization hits that what you are about to lose is so very valuable," he concluded.

* Ham to edit railroaders' newsletter: James Sackey, N9ESM, of Snoqualmie, Washington, has been named editor of the Northwest Railway Museum monthly newsletter, The Sounder. Sackey is visitor services manager for the museum, located in the historic Snoqualmie Depot--the oldest operating train station in the state of Washington. Sackey, a US Navy veteran, has written for QST and other ham radio magazines as well as for newspapers. He took over the helm of The Sounder with the September issue.--Northwest Railway Museum

* New VP9 Web site: The Radio Society of Bermuda has a new Web site. It's at http://www.bermuda-shorts.com/rsb.--Thanks to Glen, VP9ID

* Precourt to command STS-91: US astronaut Charles Precourt, KB5YSQ, will command the final scheduled shuttle/Mir docking mission next May. The flight, designated as STS-91, will be aboard the shuttle Discovery. Precourt has visited the Russian space station twice before. The flight crew will include Wendy B. Lawrence, KC5KII. The May mission will retrieve US astronaut Andy Thomas, KD5CHF, from Mir. Thomas is scheduled to travel to Mir in January.--NASA

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

>stand by and let our arrogant govt run roughshod over the rights not only
>of US citizens but of the whole world. The US government has a comeuppance
>coming, and it won't be pretty.

Think long and hard about that. Guerrilla war is ugly, prolonged, bloody,
and it is seldom successful. If you aren't ready to die for the cause, and
you probably will, or if you aren't prepared to kill a lot of innocents, and
you probably must, don't even think about such a course. It makes a fine
romantic fantasy for the armchair adventurer, but the real thing is something
else. A real guerrilla war in this country would make the Civil War pale by
comparison. The human costs would be enormous. Are you prepared to
pay those costs? Are you prepared to make your family pay those costs?

We have not exhausted all other remedies. We have other ways to alter
government policies than guerrilla war. Lets use them instead. We still
have the ballot box. We should work to throw out those who arrogantly
abuse the rights of American citizens. We still have the right to petition
and lobby, to assemble and protest. We can use jury nullification to send
a message. And if all that fails, we have non-violent civil disobedience.

Violence is a last resort, and should not even be considered until all other avenues have been exhausted. And even then we have to ask ourselves if it is worth the price, because that price is heavy indeed.

We all feel the enroachments of government into our lives. It can seem that the walls are closing in and there is no escape. Everywhere you turn there is another enroachment, another limit placed on our freedom of action. We feel that we are no longer in control of our own lives and destinies. Anything can push us over the edge, even as trivial and unimportant an issue as hobby pirate radio. And if we go over that edge, our natural tendency is to lash out. That is simple, basic, and raw, but that is rarely an answer. It is usually self-defeating and self-destructive. Real solutions are rarely that simple, or that easy.

Government use of paramilitary force against its citizens is provocative, perhaps deliberately so. We must resist the tendency to fall into their trap. They want us to react violently. It justifies their actions post hoc. And it gives them an excuse to impose further limits on our freedoms. We must avoid playing the game by their rules. We must change the nature of the game in ways that they don't understand, and in ways to which they don't know how to respond. We must resist in ways which make use of military force against us fruitless.

We must make them look the fool and the villian in the eyes of the public, and ultimately in their own eyes. The Russians have an insult, "no culture", which is one of the most devastating things they can call someone. No one wants to be thought of as being an uncouth barbarian lout, certainly not government functionaries. Making paramilitary forces look and feel like the Keystone Cops is probably one of the most effective weapons we have to use against them.

On Thu, 20 Nov 1997 23:38:01 +0700, JeBe <jebe@students.itb.ac.id> wrote:
> Some one can told me, what is the meaning of deviation ?

Deviation is the frequency change with amplitude variation of the modulating signal. Peak deviation is the maximum frequency swing with a maximum amplitude change in the modulating signal. For example, if you have a modulating signal with a 100 millivolt peak amplitude swing, and the radio gives a frequency swing of 5 kHz for that modulating signal swing, then your deviation is 5 kHz. If you reduce the modulating signal to 50 mV peak, then your deviation will be 2.5 kHz assuming the FM modulator is linear. (note, use peak swing, not peak to peak swing)

> Is it same with bandwidth ?

No. Bandwidth is more complex. FM modulation gives rise to sidebands, like any other modulation, but unlike AM, there isn't just one set of sidebands, and their relationship to the modulating signal is not a simple function. The actual number and amplitude of the sidebands depends on three factors, the modulating frequency, the deviation, and the modulation index. They are related by a Bessel function. There is a simplified expression which can be used to calculate the minimum *necessary* bandwidth for *narrow band* FM, IE with a peak deviation ratio less than 2.405. This won't correspond to the instantaneous bandwidth, but it does tell you how wide the channel must be. The expression is

Bn = 2*M + 2*D

Where Bn is the necessary bandwidth in hertz, M is the maximum modulating frequency in Hertz, and D is the peak deviation in hertz. So if you are modulating with a 1 kHz tone and have a deviation of 5 kHz, the necessary bandwidth will be 12 kHz. If you are modulating with a 4800 Hz tone, the necessary bandwidth will be 19.6 kHz.

> I read MC2833 databook from motorolla (MC2833 is single chip
> FM transceiver), but I can't find bandwidth information.

It has enough.

> I want to build FM transmitter for 9600 Bps, anyone know
> where to find enough information for :
> 1. calculate require bandwidth for specific baudrate
> 2. How to modify HT/rig transceiver so it can handle
> a high speed baudrate (9600bps)

9600 baud as used by amateurs uses the G3RUH modem. This is a GMSK modulation. Modulations with a modulation index below 1 can't be calculated with the simple expression given above. GMSK has a modulation index of 0.5, so you can't use the expression above

and need to do a more complex analysis. It will be less than 19.6 kHz,
but how much less isn't simple to calculate.

Real world measurements put it around 14 kHz at the 22 db down points.
To avoid phase distortions near the filter edges, the receive filter has to be
considerably wider than this, IE the typical 15 kHz filter in most amateur FM
rigs is too narrow. Phase distortions increase the bit error rate (BER) and
are undesirable. But a too wide filter degrades SNR, and that increases
the BER too, so a delicate balancing act is required to get this right.

Decreasing deviation below 5 kHz is one way to fit the signal into a narrower
bandwidth, but the decrease in bandwidth is not a linear function for a GMSK
modulation. So again resort to ad hoc measures are required. A deviation of
3 kHz will pass through many amateur FM receiver filters without too much
distortion. So that has become something of an amateur standard.

Now that's not the end of your troubles. The signal bandwidth must not be
compromised by the audio stages of the receiver. These typically shape
and bandlimit the demodulated signal. That will very adversely affect the BER.
So to avoid that, you take the signal directly from the demodulator and feed it
to the modem. Similarly, on the transmit side, you bypass the input audio
stages and feed the transmit modulation directly to the FM modulator.

This raises another problem. Some FM radios aren't really FM. They use
a PM modulator instead. That also distorts the waveform, and should be
avoided. And most *synthesized* radios introduce the modulation into the
PLL, and the loop filter for that will distort the waveform too. So synthesized
radios should generally be avoided. Plain crystal controlled varactor modulated
FM radios are preferred. There are a few synthesized radios which use IF
modulation (typically multimode transceivers) and they can be used because
the modulation is done outside the PLL. But your average HT or mobile rig
just won't do, regardless of any advertising hype claiming it to be "9600 baud
ready". If you can get it to work at all, the BER will be horrid.

That is a irrational statement here. I dare say that 75% of all QSO's
on the amatuer band are CW. All you have proven as that in the W1 QSL
bureau most hams that send QSL cards use CW. That is all, nothing
more or nothing less.
Just because he sees more QSL cards are for CW contacts, he make the
assumption that more contacts are via CW. That's like asking the
general public if they like carrots. If only the ones who reply are
the ones who hate carrots. You make an assuption that most people
don't like carrots. Something like a straw poll. Not worth a tinkers
D$%$^#.

PREMIER Communications Press Release #0018
21 November 1997

ADI SPECIALS FOR THE MONTH OF DECEMBER!

Time is running out on your chance to get two of the Best Values in Amateur Radio, at an even more affordable price. Both of our current special pricing offers will end on December 31, 1997.

That means that you can only get $30 off the AT-600 and AT-600HP Dualband handhelds for just a few more weeks! Likewise, our $20 mail-in rebate on the AT-201 Two Meter HT is also coming to an end.

Both radios make excellent Christmas gifts for others, or a great holiday "bonus" for yourself. To order call your local ham store. Better hurry, before time runs out!

A NOTE ON UNSOLICITED COMMERCIAL E-MAIL

Recently we sent out a -very- small number of unsolicited e-mails promoting our website. However, in light of the very strong reaction of a number of folks who received the e-mail, we have discontinued that practice, effective immediately. We apologize to everyone who was offended by our use of the Internet in this manner.

Whether the act of using electronic mail to send unsolicited advertisements is "acceptable" is entirely a matter of debate, one that whole newsgroups are devoted to. We make no judgements about whether it is "acceptable" or not.

The practice is definetly growing in popularity, and is here to stay. Even though we, at ADI, have chosen not to use this method of marketing, other companies certainly will. In hindsight, our use of direct e-mail marketing was obviously a mistake on our part, and we have no intention of repeating it.

I think not. The CB band has been like it is now for over 20 years.
And the FCC has yet to shut it down. There still is a large amount of
dollars spent each year onthe CB market. I dare venture the amount may
even be larger than that inthe amatuer market. The FC will back down
to the electronics industry. Example, in the US market 49 MHz
cordless phones were scheduled to be phased out in 1989. They were to
move to 900 MHz. The industry complained and the FCC backed off.
They have even expanded the band from 10 channels to 25 channels. 49
MHZ cordless telephones are not going away soon. To cheap to make.
Large profit margins. Corparate profits are very important. If the
amatuer market were in the 5 to 15 Billion dollar a year range, the
attacks on the frequency spectrum would be less. FCC would tolerate
more misconduct for fear of not interferring with the Commerce Clause
of the US Constitution.

And that my thoughts

Oh no one of those! Likes to keep his ball and not let anyone else
share unless they meet up to their expectations.

A smaller amatuer radio market will mean ever higher costs for new
equipment. Smaller numbers also mean less political muscle when it
comes to attacks on the bands that are already in use. To those
amatuer operators that subscribe to the 1920's, the times are a
changing. I would not be suprised if more of the UHF and higher bands
come under attack from commercial interests. These people have power
and if the population of the amatuer service remains the same or
dwindles the hobby will also. It is estimated the frequencies
assigned to the amatuer band exclusively would bring to the federal
government about 30 to 60 BILLION dollars based on the last PCS
auction inthe 900 MHZ range. That's alot bucks there for politicians
to spend. Numbers in any radio service acan help to fight the money
grabbing poloticians and commercial interests that stand to make more
than the frequencies are wortth.

That's my penny's worth

3400. ICOM-735 mod for pactor/amtor?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-22 00:00:00 UTC
From: joebuck@postoffice.worldnet.att.net
Message-ID: <657k6h$m4e@mtinsc04.worldnet.att.net>
Source record: 186155

Where should I look to try to find a modification for an ICOM-735 that would allow the use of a narrow CW filter with frequency shift keying, i.e. for pactor and amtor. There is a simple modification for a TS-430 that allows the use of the cw filter on LSB which, in effect, centers the 800 hz cw filter on 2200 hz, which is just right for frequency shift keying systems. Where might I find info on a similar modification for the ICOM-735??

Thanks

KB8UYZ.COM is now offering Free web site redirectors. If you have a long url and are tired of having to read it all out to someone over the air, we can change that! Your url can go from

www.thiscompany.com/users/yourname/yourfile.html

to an address as simple as

kb8uyz.com/yourname,

where yourname is any name that you choose for your directory. The new url will link directly to your main web site page.

All you need to do is send us your name, call sign, web site url and title, and the name you want for your directory name (it is usally best just to use your call sign). We will have your new url online with a day or two after receiving your information, and you will be notified by return email when it is ready to use.

If you have any comments or questions, please feel free to email us at dan@kb8uyz.com. Thank you!

Does anyone know a manufacturer who produces PC board frequency synthesizers suitable for dropping into a project? I need a fairly complete board level product with low phase noise in the 75-225 MHz region. Thanks.

Hi James, there is a logical explaination. CW is so inefficient as
a communications mode, that everyone has to resort to snail mail
to finish their QSOs. :-)

Now THAT is the best comment I have read concerning the
much flattened & molding dead horse issue of CW I've read
in a LONG time. Hey! there IS strength in numbers folks.

Look at it this way, if all the nutcases from 14.313 and 75 meters
were suddenly transplanted to a piece of RF real estate which was
in jepordy of being lost, would *they* still consider the purchase?

Nobody except trash wants to buy a house or rent an apt. on the
opposite side of the tracks.....so lets trash up the place and drive
em away. As big Al would say: Ho-Ho Ho-Ho Ho-Ho!

I just read Gordon West's CQ-VHF magazine review of the ADI AT-600, which was available at ADI's web site.

Does anyone know of internet sites where similar reviews, taken from ham radio magazines, are available. I am particularly interested in handheld 2 meter and 440 radios.

No doubt the magazines are reluctant to authorize publishing these articles. If I had a decent library within 100 miles, that would solve the problem.

Regards,

Laird

Who invented Morse code?

Seems obvious, but I read an article somewhere, within the last three years, which stated that it was Morse's assistant (I forgot his name) who REALLY devised the Morse code.

Can anyone verify (or debunk) this? Does anyone else remember the article and magazine?

Thanks.

Only if absolutely necessary. I want to exhaust all other avenues first,
but I fear that the number of those avenues is steadily shrinking. I am
against initiating violence, but if attacked, I will be forced to defend

myself.
>

The ballot box no longer matters, because all the election are rigged.
Every assembly and protest that the govt doesn't like is broken up by
force. Every petition is ignored. Civil disobedience worked for Gandhi and
MLK, and I'm willing to try it for as long as possible. But once the govt
declares war on us, we may have to fight back.

No.

He's asking about the license free segment between 160 and 190 KHz.
It is a US only allocation, as far as I know. It's license free, not
a ham band. There are severe limitations on input power and transmitting
antenna length. It's been around for decades.

Something about it was either talked about for the agenda or on the agenda
for WARC '79. I can't recall whether it was to make it an international
license free band or to make it an international ham band. Whatever might
could have happened didn't, and so it remains something that only the US
has.

3M/WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE
RECORDER

Best offer in the $100-$200 range takes it today 11/22/97.

I'll the best earliest cash offer in the above $ range by
the end of today, Saturday, 11/22/97 12:00 Midnite E.S.T.

MAKE AN OFFER--YOU MIGHT END UP WITH A VERY NICE UNIT!!!

- THIS IS A GREAT COMPACT PORTABLE COMMERCIAL QUALITY UNIT
FROM EITHER THE LATE 1950'S OR 1960'S. WOLLENSAK MADE
HIGH QUALITY EXPENSIVE UNITS AS WE ALL KNOW.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY UNIT.

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age. Very impressive
compact portable high end unit.

Mostly chrome or stainless steel case. Metal speaker grill
has some light rust in parts that can be easily taken care
of to make it perfect.

- SIZE (APPROX.)

6 3/4" HIGH x 11 3/4" WIDE x 10 5/8" DEEP

- WEIGHT (APPROX.)

18 pounds (fan cooled)

- BACK PLATE INFO

DES. NO. 185,262

PAT. NO. 2,877,958
2,942,875

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 track switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Does not include microphone.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

I'll the take best earliest cash offer in the above $ range by end of today, Saturday, 11/22/97 12:00 Midnite E.S.T.

Thank you for reading this.

Poor Vince. If *he* had done his homework, he would have noted the public
comments which I filed with the FCC (14 copies) on Docket 15928 on Thursday
July 1, 1965 (which I just dug out of storage at my uncle's house). I addressed
the issues squarely then, and continue to do so today. Despite verbiage to the
contrary, the *intent* of Incentive Licensing was clearly not about technical
competence. And I said so at the time. And certainly the *effect* of Incentive
Licensing had nothing to do with technical competence. The historical record
bears that out.

However, in my earlier post, I did make a serious error. I blamed A Prose Walker
for Incentive Licensing. That was wrong. Walker had left the FCC and was working
for Collins Radio at the time of Incentive Licensing. He became chief of the
Amateur and Citizens Division after returning to the FCC in 1973. He was the
one who pushed through Docket 18803, the incredibly bad repeater docket which
even appalled Lew McCoy at the ARRL (to get a repeater license under that
Docket, you had to present a filing to the FCC which was even more exhaustive
than was required for a broadcast station, remote base operation was outlawed,
linking of repeaters was outlawed, etc). I also fought that (and the forces of
right did finally prevail on that one). That was the issue where the full
Commission held a hearing which resulted in the reversal of that debacle,
and left Walker in bad odor with the Commission. The old memory confused

the two issues in my previous post. Mea Culpa.

Docket 15928 was an outgrowth of the ARRL's RM-499. I was not aware of RM-499 at the time (the ARRL tried to slip it over the transom in a very low key manner, and I wasn't following regulatory issues closely then). By the time 15928 was issued, it was a done deal, and my comments on that came to naught. That was a galvanizing issue for me, and was the start of my political activism. I have never given up trying to undo the damage caused by Incentive Licensing, which I witnessed first hand. And I never will. It was the wrong answer to the wrong problem then, and it is still wrong now.

The ARRL's thesis in RM-499 was that amateurs had become appliance operators and were no longer innovating the way they had in the 1930s. Their solution to that was to return to the licensing system of the 1930s. The fallacy of that should be obvious. The primary innovations of amateurs in the 30s had to do with phone, and only amateurs who had passed a high speed Morse test were permitted to operate phone. Thus high speed Morse testing became associated with those who were innovating, but it was a matter of confusing correlation due to a licensing artifact with causation of innovation.

It should be obvious that Incentive Licensing has had no impact on appliance operation. Most amateurs today still buy their main transceiver rather than building it, and for the same reasons that amateurs in the 1950s and early 1960s bought their radios. That's more bang for the buck. It had already gotten cheaper to buy an assembled radio than it cost to scratch build one of similar capability. And amateurs were starting to have the sort of money, which most amateurs did not have in the 1930s Great Depression, to go out and buy a good radio right from the start.

But amateurs were still building and innovating, though generally not at HF anymore. Sam Harris, Bill Hosington, and others were doing very interesting things at VHF/UHF, Irv Hoff was doing wonders with RTTY, and the FM and repeater explosion was coming into full swing. The experimenters and innovators had moved beyond OOK Morse. Today that is still true. The innovators are doing protocol design, DSP, SS, etc. They are not doing OOK Morse. High speed Morse testing is still the wrong answer to the wrong question. It is incentivizing the wrong things. And is sending the wrong message about what is important in amateur radio. It also continues to act as a divisive force in the social fabric of amateur radio. And it has no logic or legitimacy as a regulatory concern. Like Walker's 18803, it is a barrier to progress and not a roadmap to progress.

does anyone know of any frequencies that am is widely used on 2meter? I know that the bandplan allows for experimental freqs on 145.5-145.8 but I have heard FM there also....I only wish to use AM about 1% of the time, <just to show on a qsl card that I hade AM contacts> If anyone knows the proper frequencies that are already used, I would greatly appreciate it.

160-190 Khz is the band.....1watt MAX input power to final amp,
antenna PLUS feedline length MAX on TX is 50ft...no rcvr restrictions.
Any mode that fits in the 30 Khz space is legal....any callsign also.
Band is called 1750 Meters also....

Are they legal control operators? No. Do they sometimes operate
radios? Yes.

If I sit with my arms folded next to my brother (who is not licensed)
while he manipulates the controls of my station and communicates with
other hams using my call sign, without my phyical intervention or
assistance, who is "operating" the radio?

Yesterday I noticed that KD4CDB's home page was unavailable. Seems it "exceeded it's bandwidth" for the month. Too many hits I guess.

Seems to be a good way to shut him down. On the December it should be available again... and I will hit it everytime I log on. Perhaps if we all did that we could make his page unavailalble within, say, the first week of the month.

Of course he could buy more bandwidth from Mindspring - but I have no heartache with making him pay more.

Hello Steve: As a amateur radio operator, you will be no match for the 2000 channel 2000 plus watts of Amor Powers. He is a big strap big time. He also has 50 pallets of Grid Leak Bias, that will go for just under fair market price, at 15 American Dollars a liter, try beating that! So the financial impilcation here is odvious, Amor will turn good old American Dollar$ into Max ERP. I suggest you just pay for your timeshare and be on with yourself, good buddy. Money doesn't talk, it moves mountains.

Just trying to help, here.

Jay at jay123a@ptw.com

No..what I said was correct. These are PCS phones that have the
ability to fall back to cellular in a non-covered area. They are not
Cellular phones as Cellular is known.
PCS is not the same as cellular.

My tee-shirt says it all. I wear it at ham fests. It has very attractive drawings of a ham and a turkey, the turkey holding a microphone and with a halo over his head. The text: "If you don't know code, you're not a Ham...you're a Turkey!" This no-code thing is just another good example of the dumbing down of America!

Steve;

That is just exactly what the FCC did when they opened up CB in the early 70s. The temporary was good for 90 days until you could write and get a real number. Mine became KAAV7422 (strange since I submitted mine 2 months before my dad submitted his and he got KYV1661) I was so late in the game that I got a 4 letter one.

Typical FCC perversion of good frequency space.

Next they will allow you to use a computer that 'reads' code to take the code test. (Everyone already uses computer keyers.)

Oops, my reality filter broke.

On Thu, 20 Nov 1997 15:34:29 -0500, kf2ti@planet.net (Steve (KF2TI - Landing, NJ)) wrote:

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all amateur radio vendors, and many national electronic chain outlets, in an effort to shore-up the sagging radio sales picture, were given the authority to issue amateur radio call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the call sign block of "WT" along with the district #, for all vendors to issue. These "try before you study" licenses will be issued for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the hobby is worth the effort of all the study time, is authorized to operate for a period of one month along with the purchase of a radio. The new operator will be authorized at the General class level with a "WT" call sign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a class, or take their exam from a local VEC or from the vendor, which is also now authorized to give radio exams. If the operator decides the hobby isn't worth the aggravation they find on the HF bands, he/she can return the radio for a full refund.

More likely, the CW contacts were the only ones with enough *meaningful*
content to justify a QSL card at today's cost.

The key here is "under supervision". In other words the same regulations apply to a ham without CW as does a visitor in the shack without a ham ticket. They can both "talk" on the radio provided the properly licensed ham is in direct physical control of the equipment. The same applies in the USA.

I GOT IT!! First thing I did was wrap 3 wraps of tin foil around the distributer. Noise on 6m went from S9 to about S3... I can live with that :) And the truck was running at about 2500 rpm! There were a few holes so I added more foil pieces. Noise went from S3 back to S9, don't know why but they didn't last. Next, I cut a jam can in half and soldered the two pieces to make a short cylinder and put that over the dist. (removing the tin foil), then put tin foil over the top where the wires enter. 6 meters was cured! A single wrap of foil won't work, I tried that before..

Now on to 80m. Still S9 or better. I removed my old ground to the radiator and threw it away.. Had a look and like a dummy last year didn't remove the paint where the ground attached. Gotta remember it was December and really cold.. Got the wire wheel on the drill and removed the paint (ah duhh...) Then I got some braid from RG8 and used that to ground from the rad to the antenna to the block and to the frame. 80 meters and 40 meters were so quite I thought my antenna was broken :)

Oh yea, I put a 22,000 uF capacitor with a 14amp fuse on the alternator. That helped a bit.

PrimeCo just came out with a CDMA-AMPS dual mode phone. However, it does not have analog service everywhere that analog service is available. They have agreements in certain areas. It looks like they have no coverage, or future coverage planned, in many areas. St. Louis is one of those areas.

The prior sale fell through so you lucky people get another chance at this radio.

It is a 9 on a 10 scale. Does 120 watts on 160 meters and 85 watts on 10 meters.

All mode" AM, FM, USB, LSB, CW. Digital Frequency Read out.

Asking $ 400 and I will pay shipping in the continental US.

Contact me at : KC2BCG@aol.com

Thanks for reading this ad!

WELL, that's sort of an oxymoron - who would buy programs or hardware for a computer that WOULDN'T run it?

But, like it or not, if you want to upgrade your software - as well as some hardware - you will HAVE to go to Windows 95 or it's successor, since all serious software developers are quite naturally going to write their stuff for the present and future platforms - NOT the past! SO, enjoy your present stuff, and get the most out of it, cuz yer probably locked into it for the rest of it's useful life...

According to the regulation, no coders can use HFs without
having morse here in Canada, under the supervision of who hold the
morse... I am not sure about the US regulation.

According to my Canada's Spectrum Allocation Chart from IC Spectrum
Management...

Licensed (6 KHz and up):
- Maritime Mobile
- Fixed
- Time Standard Freqs
- Omega Long Range Navigation

Not Licensed:

- 3 KHz - 6 KHz VLF Experimentation (not allocated for public
service).

These should be similar to the ones in the US.

All it would take is several serious visits of the white vans and
armed federal marshals to a few of the more vocal of the illegals--just
as they used to do-- followed up by some hard time and large financial
loss, and the bedlam above 27 mhz would abate rather suddenly. It's
just that no one really believes that such action will ever happen
again.
Don't bet on it, the potential sale of spectrum for big bucks would be
one of very few reasons it might.
Likely? No more than anyone seriously wanting to buy that part of the
specgtrum.

> > On the other hand, it would be easy to buy the spectrum and take over a
> > ham band. It's already happened.

Don't read too much into the 220 mhz deal. That was an anomoly, a blip
on the chart. Somebody got the right political connections that time,and
actually made it work. Of course it could happen again, but spectrum
hunters can't count on it for anything serious. There is such a thing as
long term planning involved in all spectrum managment. We seem destined
to lose some of the UHF/SHF region anyway, that seems inevitable due to
the future needs of commercial services.

> >
> > Therefore, we need to encourage more CB-type operation on the amateur

Have you noticed the increase in 6 meter activity? I was looking in the repeater directory and Indiana seems to be the capital of 6 meter repeaters. With the guys I have been talking with, 6 mtrs offers alot of what we wanted when we first got into ham radio. There is the ability to use surplus military and commercial gear. It has the feel of being in new territory. It gives the middle ground of HF and VHF.

I do believe that the influx of new radios with 6 mtrs has helped. Icom 706/751, Alinco, Standard.

Has anyone else seen the same phenomenon?

Specific frequency counterpoise... yes! RF "ground".....no!
If its really QRP, you'll probably get away with it. If you intend to
run moderate power, you may be opening Pandorra's box for bilateral EMI,
RFI, and EMC problems.

Not really. The 202 is built very well and is intermod free. One of the best
HTs out there. I'll take my 202 over those new midget HTs ANY day of the week.

Hello Amor: You can pay for it with all the money your going to make
selling Grid Leak Bias at $15 dollars/liter.

Jay at jay123a@ptw.com

that's interesting... in Canada, one has to hold at least "basic"
or equivalent license in order to operate the station.

In Japan, it was forbidden to operate someone else's station except
the club station. However, they changed the regulation and you could
operate someone's station under the supervision, if you hold at least
4th class (which is no code) license or equivalent or amateur licenses
from foreign countries (the US, Canada, Germany, France, Australia and
Finland) now. You cannot exceed the station licensee's limit +
your own limit though. In Canada & US, it seems you can exceed
your own limit if the station licensee holds higher license
qualification.

Japan doesn't have lots of reciprocal agreements among the countries.
They have only 6 countries. Canada, however, has around 70
(including CEPT and IARS). I decided to get Canadian license instead
(not Japan's). If you hold a Canadian license, you can operate
virtually anywhere in the world...
when I go back to Japan, I can use my certificate to open up the
station as well...

3505. The Great Capacitor Capper

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-23 00:00:00 UTC
From: hoff@america.com
Message-ID: <659lq0euj1@defiant.america.com>
Source record: 186113

Hi All,

All I wanted was a .15 uf axial lead 2000 volt capacitor. I'm solving the problem with three .47 uf 600 volt jobs in series.

Just as a challange, however, I'm still trying to see if one can't buy what I originally wanted at a reasonable price. Allied Electronics has them if you can hack the $50 min order for a $3.56 item. GE makes them as part # 42L3152, but try and buy one. There business customer service gave me a couple of distributers. The first one suggested a $100 min, but didn't stock them anyway. Still working on the second one.

Found a couple of companies on the web that make them. One in CA who told me they don't sell to people, only to manufactures. Another one in Vermont, but so far I haven't found a distributer they list who stocks them.

I have also looked in several electronic catalogs that will sell without a minimum but none are listed.

Be interested to hear from anyone who thinks they know how to buy one.

Thanks for your time

Conrad W8MHH hoff@america.com

WK1V (apparently James J. Martin, Jr.) wrote:

"Operate?????"

That's something that has changed over the years. It used to be the case that an unlicensed person couldn't even push the transmit button (much less send CW) with the control operator working everything else -- the control op had to switch between transmit and receive too. At some point the FCC changed the rules to state that an unlicensed third party could "participate in amateur radiocommunication" -- I believe that was the phrase -- in such a way that led many to believe that the third party could do everything as long as a control operator was on hand to make sure everything stayed legal.

However, the FCC seems to have changed the rules again in the last decade or so. The current wording in 97.115b is that "The third party may participate in stating the message where...(t)he control operator is present at the control point and is continuously monitoring and supervising the third party's participation..."

This seems confusing to me, as the second part of that (97.115b(1)) seems to imply that the unlicensed person can operate the rig, but the first part ("stating the message") seems to say only that the third party can talk into the mike (rather than having his written message read or keyed by the control op), not that he can do other things related to operating the station.

In any case, not only is this practice restricted by the usual international third-party rules, but persons who have been licensed amateurs and are now forbidden to operate an amateur station (their ticket has been yanked, suspended or turned in, or they are under a cease and desist order - 97.115b(2)) aren't allowed to do this. In other words, if you're kicked off the air you *stay* off the air.

The CB Guy wrote:

"Cellulars do not have this capability, but some of the better PCS phones offer it, because their coverage is not complete yet."

Excuse me...if the unit can operate on both an 800 MHz cellular system and a 1900 Mhz PCS system, seems to me that it *would* be a cellular phone (as well as a PCS phone).

Maybe you meant to say that *digital* cellular phones can't fall back to PCS?

(Have you heard about the latest cellular scam? Some carriers are offering lower rates for digital phones, so a few people apparently are altering the electronic serial numbers of cheap analog phones to match the format of digital cellular ESNs, then signing up for service at the lower digital rate.)

FOR SALE - Daiwa compact SWR Power Meter Model Number CN-520.
Features aRange 1.8-60MHz. Power 50 ohms - 2kW. Matching Needles on face to
read
Forward and Reflected power and precise SWR.
Price $60 plus a few bucks for shipping.

Thanks for reading my offer

Charles Francer, N1RPD

3517. Re: Grounding and Portable operation

Ground rods are primarily for lightning protection since RF penetrates only a
few
inches below the surface. Just stay QRX when near thunderstorms and you will
do fine.
(((73)))
Phil, K5PC

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities
Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station location becomes available.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/records.htm

3519. Looking for Manuals,etc. for Johnson Challenger (FM 5853)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-24 00:00:00 UTC
From: sean_i60@hotmail.com
Message-ID: <34345fd2.23493804@news.tds.net>
Source record: 185972

Name here is Sean
I acquired two EF Johnson handheld VHF (FM 5853) Challenger models.
Needed are ANY manuals/ programming hardware and/ software as well as
specs about the radio(s)

Here is the given information that appears on a label on the back of
the radios :

FCC ID A T H 9 0 F 2 4 2 5 8 5 3

E.F. JOHNSON CO. USA

CHALLENGER
FM 5 8 5 3

DOC T. A. 9 3 3 2 1 2 0 4 5 P
E.F. JOHNSON CANADA INC.
Serial No. 5 8 5 3 B 0 8 0 A 1 1 4 9 8

Any information about these radios will be welcome :)

Email me at
sean_i60@hotmail.com

Thank you very much :)

3520. Need Manual / Specs and Any information on Johnson VHF radio (model 5853 / Handheld)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-24 00:00:00 UTC
From: Sean_i60@hotmail.com
Message-ID: <34340825.1045477@news.tds.net>
Source record: 185973

I have acquired 2 E.F. Johnson Handheld VHF radios (model FM 5853] and would appreciate ANY Specs / manuals and other materrial including programming software /hardware requirements. Below is what the back label contains on the back of the radio.

F.C.C. ID A T H 9 0 F 2 4 2 5 8 5 3
E.F. JOHNSON CO. USA

Challenger
FM 5 8 5 3

DOC T. A. 9 3 3 2 1 2 0 4 5 P
E.F. JOHNSON CANADA INC.
Serial No. 5 8 5 3 B 0 8 0 A 1 1 4 9 8

Email at this address. sean_i60@hotmail.com

I thankyou for ANY information on this radio.

Sean

As an SWL with no interest in taking any form of licence CB or
otherwise, it may upset you to know that I consider that some UK
Amateurs that I here on the HF bands are already treating it as an
extension of the CB bands. I can not comment on other countries as the
only language I speak is English.
Just listen on the 3.5 Meg area. What do you hear. Badly netted
circuits just chatting.
As for the licence system I unfortunately believe that you should be
licenced for SSB, with seperate examinations for CW, Data Modes and
Digital transmissions. That way perhaps people might take more care when
transmitting, and they at least now the effects upon other users of the
Radio spectrum.
I would also suggest that assigned bands to modes become mandatory.
Just my thoughts as an SWL who listens.

I was serious about the relationship between PCS and microwave ovens.
I wouldn't think it would be safe to use PCS for a long time although
the PCS's power is very low.

do you have any ideas of power used in the microwave + power used in
the PCS ??

Well, so much for Masa making relevant posts... If Masa had really done his research, he would have found that an unlicensed person can use HF if under the supervision of a properly licensed amateur. Using Masa's logic, in this post, why have an amateur license at all? Just find a properly licensed amateur and operate under his or her supervision...

I run QRP from batteries so safety isn't an issue. And I generally use
dipole-type antennas. So there's no necessity to "ground" the rig and I
don't make any attempt to do so.

Depends on how you define successful. It has been sucessful in our lifetime
in Vietnam, Afghanistan and South Africa. In general, it is far less bloody
than traditional warfare because it does not confront the enemy head on
with massed troops. As far as it being ugly, what type of warfare isn't?

2.45 GHz has no special properties which make it particularly effective at heating flesh. It just happens to be a ISM band where it is convienent to generate power in a cavity of a size useful for home cooking. It heats by ordinary dielectric heating. Microwave ovens typically range from 600 watts to 1000 watts. PCS runs a maximum of 0.6 watt.

There is some slight concern about localized heating to sensitive tissues in the head, primarily the eyes, but this is almost 10 db less than the power used by amateur HTs, and over 30 db less than is used by microwave ovens. If you persistently stuck the PCS antenna against your eyeball, there might be some concern, but otherwise it isn't a significant hazard.

Actually, Vietnam wasn't won by guerrilla warfare. 20 years of VC activity
led to virtually no gains. It was the introduction of NVA regulars backed by
massive Soviet aid which ultimately won that war after the US abandoned
the South Vietnamese. And in Afghanistan, it was again massive outside
aid (this time from the US, channeled through Pakistan) which turned the
tide against the Soviet occupation forces, though at least in that case the
combatants did use guerrilla tactics right up to the end, so I'll grant half
credit for that one. The situation in South Africa was not resolved by guerrilla
warfare at all. It was resolved by a global economic boycott.

There are a few examples of genuine guerrilla warfare victories. Castro's
conquest of Cuba is one. But most guerrilla wars wind up as stalemates at
best, and outright losses at worst. For example, look at the guerrilla movements
in Latin America today. Virtually all of them are merely nuisances, and
governments continue to change the old fashioned way, by military coup. In
Africa, the situation is similar, with most guerrilla movements achieving at
best a stalemate with the government forces of whatever dictator happens
to be in power at the moment.

If victory is to be achieved, a guerrilla movement generally must convert
itself to a popular people's army at some point and convert to conventional
military tactics to destroy its opponent by main force. That's usually very
difficult to do without massive outside military aid. What nation is going
to aid the radio pirates against the US government?

The first microwave ovens in the 1950s operated at 915 MHz,
and were big, bulky, institutional-size brutes - as you might
imagine, when you consider the size of 915 MHz waveguide and
cavities. Home microwave ovens didn't become practical until
they moved to 2.45 GHz, with the attendant smaller cavities
and plumbing.

>amall QRP rigs with indoor antennas if you knew the ground worked?
>Chris

Your phone guy should stick to telephones. The outlet safety ground
will not be a good RF ground. The run back to Earth is far too long,
and there are too many other wires coupled to it along the way. If
would be a RFI nightmare if any RF currents were allowed to flow
on it

OTOH, if you're using a balanced antenna, you don't need an RF
ground at the radio. A safety ground is all that is required. And the
third wire will serve admirably for that. (It won't do for lightning
protection, however. For that you *do* need a very good RF ground.
But that should be where the antenna feeder enters the house, and
not at the radio.)

If you are feeding an unbalanced antenna, then you need a RF ground
(or a counterpoise), but the best place for that is at the antenna feedpoint,
and not at the radio (unless the two are the same point, IE a random wire
driven directly from the radio (or tuner). That's generally a poor setup,
though, and you can probably do better than that.

There were 8 of them left, parked in a storage yard in Maryland, last I
heard. The FCC RIFed the truck operators, so they have no one to
operate them. Maybe some of the lawyers they hired with the money
they saved by RIFing the technical people can be taught to drive them,
but I doubt they can be taught to operate them.

No. Most of us don't use Morse Code or Vail Code, whichever it is, on the
radio. If we operate code, we use the International Code, which is different
from Morse Code (properly known as American Morse). US amateurs are
permitted to use American Morse, or at least they were before the latest
Part 97 rewrite, but only with another American station.

I sell the following amplifiers HF, all under perfect conditions.
Ampli Collins 208U10, autotuning 2-30 Mhz, 10 Kw continues, with exciter Redifon/Harris.
3 Ampli Siemens, autotuning 1.5-30 -Mhz, 10 Kw continues, Siemens.
Ampli Collins 205J3 new, modified by the Collins 45 Kw pep, autotuning 2-30 Mhz.
1 Ampli Harrises 84V, 13 Kw cw.
4 Antennas Log periodic 2-30 Mhz 10-50 kw.
I have cable, connectrors, end more.
They take an interest you write me.

Well...it says that the control operator must ensure the immediate
proper operation of the station. It does not say that the control
operator has to be the one actually operating the radio. I suppose if I
could figure out a way to accomplish this in my sleep it would be
prefectly legal. ;-)

>rod.

Hey Bert,

I'm not sure why you want to ground it, but here's what I do:
I use a 4 ft rod, which is easily driven in with a small mall (about 2
pounds) and it comes out very easily if you twist it back and forth a
bit first (vise grips are handy). However, I do this only for a
modicum of lightning protection, because I use dipoles with a balun,
and I see no need for a ground for purposes of getting a good signal
into the air. If you are using a vertical, then you've got a much
bigger problem than you've let on to, so far - like what do you do for
radials?

> station.

This should not be confusing. There is nothing in the first sentence of 97.115 restricting the third party to "only...talk into the mike". It simply says the third party can state the message if the conditions in (1) and (2) are met. None of those conditions require the control operator to actually be the "sole manipulator of the controls" (stealing a phrase from aviation regs).

Don't read 97.115(b), (b)(1), and (b)(2) separately. All three paragraphs cover the issue together.

Be careful not to join the "invent your own regulation" club. Part 97 is one of the easiest parts of 47 CFR to read, IMNTBHO. Its pretty staright forward, plain 'ol enlgish when compared to other regs.

My favorite "made up reg" was when someone told me that if I allow someone to talk on my radio (third party), I was required to ID the transmissions myself - They actually told me that the ID had to be in my voice to be legal. :-D

BTW - does this need to be in BOTH r.r.a.misc AND r.r.a.policy?

Regards

Wrong, The maximum power of the 1900 Mhz CDMA PCS phones is 200 mW, not 600 mW. 600 mW is the maximum power for the handheld analog cell phones. The ATT Digital PCS phones are 600 mW, but that is in a different frequency range than the range on discusion here.

3547. FCC's New Low Cost Enforcement Plan

The new plan is to have Volunteer Drivers (actually hams called "VDs"),
with Volunteer Field Agents (VFAs = CBers wielding baseball bats
operating the DF equipment and confiscating equipment). The lawyers will
only ride along to help settle any conflicts between the VDs and VFAs.

Also look at the Novice Notes Online Page (URL below) - Links section - under "Antennas" for a few links on magnetic loop antennas.

I use a homebrew 1.5m square loop indoors for 80 & 40m and it works very well considering its size.

My new mod for the htx-202;
You need to remove the cover from the 202, this mod is best performed
outdoors in strong sunlight. Tools needed are just large hammer or
heavey object, place ht on solid stump and smash it into little pieces,
these pieces are to be spread around liberally on your driveway, if you
don't have a driveway any well traveled interstate hwy will do.
After this mod is done replace the cover and be proud that you have
relieved yourself (pun intended) of a piece of junk.
BTW, the cover can then be used as a planter in a miniture house.

Hi Gary,
> What nation is going
>to aid the radio pirates against the US government?
It's called people power.
You should of seen the way that the CB issue was fought and won here in the UK during the late 70's, early 80's. We're talking a march past westminster and our houses of parliament.
I believe a similar battle was won in spain when the radio authority's were considering doing away with SSB privaleges on 11m.
From what I've read on the ng's, the shit will hit the fan sometime in the not too distant in the US regarding the microcasters and others in the free radio movement.
Surely you agree that you can only push people so far.
Interference is hogwash, free radio operators would I'm sure gladly pay for pro quality tx's if they were not going to be busted.
I know commercial licenced broadcasters here in the UK whose spectral quality leaves something to be desired!

Thanks for listening.

I am still looking for meteor scatter skeds on 10 meters. This is a very interesting and and meteor scatter skeds can be made on randoms on most morning. If you have ssb and would like to run a meteor scatter sked on 10 meters, please e-mail me and we can setup a sked. I run early morning sked (1200 UTS +-) . I am especially loking for skeds in the Northeast. If you run meteor scatter on 10 meters please e-mail and let me know how you are doing, what distance you are running and your completions ! New commers are welcome. Questions on meteor scatter are welcome. I am located in Southeast Ms. (EM51JQ). What do you think aout 28.400 as a meteor scatter calling frequency ? 73- Larry WB5KYK

3554. SSB Handheld 10m (12/15/17/20m next?)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-24 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <3479FCA4.3CC5@radio.net>
Source record: 186007
Cross-posted to:
rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment

The Cherokee AH-100 SSB handheld makes a great little 10 meter sideband rig. The price just dropped to US$214. It comes with a mobile adapter (MA100) that replaces the battery pack. The MA100 has a single coiled cord that ends in an SO-239 and cig lighter plug. This turns it into an all-in-the-mic mobile rig.

7Watts PEP. AM/SSB. It's fun working "handheld DX" with it when the band is open, using a WTA-1 Maxon telescopic whip.

Has anyone done the simple 12 meter mod yet?

When will ICOM, Kenwood, Yaesu, or Alinco, etc, jump in, using their already-tooled cases and battery packs, to bring out a 20, 17, 15, 12, or 10 meter handheld?
They could just start with a 10m and/or 15m SSB/(FM)/CW unit; with the rising DX conditions and the increase in activity.
Next: How about an HF all band handheld? Companion antenna could provide filtering.

Use a balanced antenna and don't worry about RF grounding (still need
to maintain AC ground integrity for safety if running off AC). We've
run coax-fed dipoles in field day from the top of a mountain, where
it's impossible to drive a ground rod because the ground is so rocky.
No problems at all- no hot chassis, the auto antenna tuner works fine,
etc.

I don't agree. Vietnam was won by guerilla warfare. By the time the US left, the war was won. It's well known the US won every (or nearly so) major battle of the war but lost the war. This is because the U.S. could not or would not fight the guerilla war in the jungle. Furthermore, the VC won the psychological war, which is also part of guerilla warfare. Regardless of who was backing them, the VC or North Vietnamese won using guerilla warfare, not conventional techniques.

Also, the economic boycott of South Africa was not universal. It was not the only reason for the change of government.

You are entitled to your opinion of course, and I am entitled to mine. It
wasn't spam. It was an informative message about a non-profit organization.
[fiscus@mcn.net (Vincent Fiscus, KB7ADL)]

You are welcome to your opinion. But you do need to make it clear when
something is your opinion, and that you are acting on your own, not as
a representative of that organization (whether or not you are a member).
Otherwise, you can get yourself in trouble, as well as the organization
that you intend to promote. Please be more careful in the future.

Hello,
can you tell me if there is a station monitor that would
work well with my Yaesu FT-1000. I understand that the IF
Out for receiver monitoring is 70 Mhz. Is there a station
monitor that has a pan adapter that can handle that ?
Any help in this area would be appreciated. Thanks Pete..

>> 600 watts to 1000 watts. PCS runs a maximum of 0.6 watt.
>Wrong, The maximum power of the 1900 Mhz CDMA PCS phones is 200 mW, not
>600 mW. 600 mW is the maximum power for the handheld analog cell phones.
>The ATT Digital PCS phones are 600 mW, but that is in a different
>frequency range than the range on discusion here.

My CDMA phone is 800 mhz and is 200mw max. It has a regular AMPS phone built in also (for roaming, etc.) and that uses up to the 600mw max for the analog. All in a 9 ounce package and a 1200 milliamphour battery. Not bad.

Curtis:

I am curious as to the nature of your beef with KD4CDB. What did he do that warrants imposing censorship on him? I saw his page. It is his opinion. So what? Do you try and shut down every page you encounter where you don't agree with all of its content?

Am I missing something here? I'm not picking on you either, BTW.....I have seen a few other posts that had this same theme and I am truly wondering where all this originated.

The interesting aspect of this is that the same guys that don't like it seem to go overboard advertising it. Nobody would even know it's there if it wasn't for what looks like a clear lack of strategic decision making on the part of his enemies. I doubt that the bandwidth would be anywhere near topped out if you guys weren't so obsessed with his page. And all he has to do is bump up the bandwidth or switch to another provider and the guy will have the most widely read page in amateur radio, all thanks to the dopes (except for *you* of course!!) who were too short-sighted to realize what they were actually doing.

If it isn't intended to be funny, it still is.
The idea of free-banders paying to get extra free band is sure
funny.

> Sorry guys, hf bands are not in the bidding wars, only uhf and vhf thats
> where the amateurs up to tech lite have use. But it was very funny!

Yeah, but as CO2KK points out in CQ, 10m is like 6m a band that is
both VHF and HF. And originally, the cut-off for VHF was below 10m.
It could be again.

And if congress smells money ... someone who won't welch on their
auction payment ... look out.

Someone ought to track this down and see if the dateline was APR 1,
or if it's real. (But being real will only make it funnier.)

If the hum (noise)is comming from the power supply case itself, the hum may be caused by mechanical vibrations caused by the transformer core winding plates being lose or from sympathetic vibrations induced in the housing from the Xfmr.

TURN THE PS OFF. DISCHARGE THE CAPACITORS (Safety First) then check to see if the laminated core winding plates are loose, tighten any screwa holding them together, and then check that the Xfmr casing is securely fastened to the case.

Every examination I have ever taken the VE passes out "scratch paper". It
is my understanding that an examinee can take the CW examination and not
write a word down (copy in his/her head) and still take and pass the
"fill in the blank" or "multiple choice".

I have heard that some VE teams claim they will not pass you unless
you have "sufficient copy" to support the answers on your exam. However,
I suspect that such a policy would rapidly get challenged, in court if
necessary, as Part 97 does not indicate that "solid copy" is a requirement.

>Again, Masa has not done his homework (research). Not all U.S. exams are
>multiple choice... Some are 'fill in the blank', some may be in an essay
>format and some may be solid copy (at the option of the examing VE team).

I've never seen an "essay" examination given by a VE. For that matter,
I don't think the ARRL or W5YI VECs support "essay questions". Which VEC
is your group affiliated with?

The Coordinated Amateur Radio Observation System (CAROS) is now
operational and on-line!

All radio communicators are welcomed and encouraged to submit propagation
reports to this system.

All submitted reports are made available on our CAROS web page.

For details, contact: http://solar.uleth.ca/solar/www/caros.html

Tim,
You are entitled to your opinion of course, and I am entitled to mine. It wasn't spam. It was an informative message about a non-profit organization. Of the 30 or so groups it could be relevant too. It was only posted to six. Have you never heard discussion about listening to satellites or MIR in the scanner newsgroup, or the SWL who listens to shuttle communications on his shortwave transmitted by amsat members at the Goddard amateur radio club in the shortwave newsgroup? Amsat is a place where information can be exchanged to help someone enjoy their radio hobby, whatever that might be.

The morse test in Canada is slightly different from the states.

First, we have both receiving and transmitting test.

For receiving, you must write down what you hear. If you make 5
mistakes or more, you don't pass the exam.

For transmitting, you can make mistakes, but you must correct your
mistakes. If you don't realize your mistake or go on without
correcting your mistake, you don't pass the exam.

As far as the multiple choice type of quesitons (US) are concerned,
the morse test in Canada is more strict.

3599. RADIO PROPAGATION NETWORK

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-25 00:00:00 UTC
From: COler@Solar.Stanford.Edu
Message-ID: <65dt7q$ncg1@mars.online.uleth.ca>
Source record: 185937
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

We would like to announce the availability of a new radio propagation service. The service is known as CAROS, or the Coordinated Amateur Radio Observation System.

http://solar.uleth.ca/solar/www/caros.html

CAROS is based on the principle of amateurs contributing radio propagation information for others to use.

We have, for several years, been planning to implement such a service primarily to test whether amateurs can supply sufficient information to make such a global service useful. Its success or failure will be directly dependent upon those who use it and find it useful. Your cooperation is solicited.

We believe amateur radio operators and listeners can supply a considerable amount of information regarding the state of the Earth's ionosphere by contributing to this service.

A small sample of the types of information we are interested in includes:

1. Propagation reports telling others of NORMAL propagation conditions on paths that you are familiar with. If, for instance, you communicate between your location and London, England and notice today that propagation is normal, a report submitted to us using: http://solar.uleth.ca/solar/www/subcaros.html (or the link provided on our CAROS homepage) would be valuable.☐

2. Propagation reports indicating BELOW-NORMAL propagation conditions on paths you are familiar with. Other radio communicators may appreciate knowing that propagation on specific paths is not normal.

3. Propagation reports indicating ABOVE-NORMAL propagation conditions on paths you use are also very valuable. Above-normal propagation includes receiving signals that normally aren't there, or band openings on frequencies that normally aren't open. These can be exceptionally valuable to others.

4. Unusual propagation (non-great-circle, aurora-related, meteor-induced, etc) that you observe. We hope people will make an effort to report unusual propagation conditions. It will give others a chance to confirm what you have observed and even enjoy unusual propagation conditions that they might not have otherwise known about.

5. Rare contacts should also be reported. If, for example, you are able to establish contact with someone on a remote island that perhaps is normally not there or simply has never been found before, please take the time to report it, so others can look for the same opportunity to make a rare contact.

Any other form of radio propagation related information that you feel would be of value to others (which includes just about anything).

There are no limitations. We will accept reports from anyone, at any time, and on any frequency (from ELF to microwave and beyond). Moon-bounce communicators are welcome to join in the fun, as are satellite communicators and anyone else.

All reports are archived. Please remember to be as specific as you can in your propagation report submissions. Since there is a possibility that this service could generate data that might supplement types of future scientific research, we hope all submissions will be detailed and complete.

The main CAROS web page is: http://solar.uleth.ca/solar/www/caros.html
It is updated every 5 minutes. For those who are using web browsers capable of automatic screen updating, your web-browser should automatically fetch the latest information every 5 minutes. All others will need to manually click on the "Reload" button to refresh their information.

The main CAROS submission form for providing propagation reports is:
http://solar.uleth.ca/solar/www/subcaros.html

For all of those who contribute to and support this service, we would like to express our gratitude.

Any questions or problems regarding this service should be directed to COler@Solar.Stanford.Edu.

** End of Bulletin **

3600. smallest transmitter?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-25 00:00:00 UTC

Hoping someone here can help me out. I'm looking for information on miniature transmitters, something that will send out a signal using very little power. The signal will just be a beacon for location. Something similar to avalanche victim locating devices, only smaller. I don't know where to start looking for this type of information. Any help would be appreciated.

HRS.

> to aid the radio pirates against the US government?

Actually, there's a lot of countries who hate the US. Iran and Iraq for example. China would probably be willing to pitch in. And then there are the transnational munitions makers who would love to profit from a US civil war. If the people are to be sucessful in the upcoming civil war, we need to recruit outside help, I agree, even from people we may not like all that much (Saddam Hussein). Biochem weapons tilt the balance in our

favor, unless the govt is willing to use nukes to obliterate the American people.

Next time you are so offended Rosenfeld try one of these options: 1. Grab the bull by the horns by keying up your rig and telling the people to watch their language. 2. Spin your vfo 3. Turn your rig off and get on the Internet Note:With option 3 please do not make a whiny post to a news group. You can listen to the Jewish filthmonger WB2OTK on 3901 if our language is not raw enough.

I just passed my tests to get my Tech license last week, and I was anxious to get my call sign. The Gordon West books indicated it would take several days, but I just spoke to someone at the FCC, and they indicated that they were working on applications filed 6 Nov. I realize that in the old days that it was 90 days or more before you got your authority to broadcast, but in the old days a lot of things sucked. Why is it taking the FCC 3 weeks to process applications?

Hi guys, as u know, I'm looking for an HT1000 or GP300 VHF 16ch. radio! Have been watching the posts, and am ready to buy. I've noticed a lot of GP300's going in pairs, this would be nice as well. Will offer $300 for good HT1000/batt/rpd. chrgr. and roughly same for pair of GP300's in good shape. will also offer partial trade of items previously posted by me! Prefer newer models 'c' or so (ht)... Please email and let me know what u have and we'll talk. remember to remove the spam filter as listed below when replying!
thanks!

I myself do not find it to be 'spam'. To me spam is unrelated junk
mail.

The P3D satellite is built with and run by donations from Hams like
myself. And it is the most expensive ham satellite ever.

SWL's will be able to listen to P3D and should find it very enjoyable.
Hams worldwide will be able to work P3D with low power and easy to
build antennas.

3619. ICOM-735 mod to use cw filter with Pactor/Amtor?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-25 00:00:00 UTC
From: joebuck@postoffice.worldnet.att.net
Message-ID: <65eqrv$t93@mtinsc02.worldnet.att.net>

Does anyone know of a modification to an ICOM-735 that allows the CW filter to be used with AMTOR or Pactor, or can you suggest where I might search for such a modification. I know of a simple modification to a TS-430 that allows the CW filter to be used with LSB to, in effect, use the 800 hz filter at 2200 hz. Is there a similar mod for the ICOM-735. Any info would be appreciated

I can also check the database by calling (888)CALL-FCC. That still
doesn't explain why the FCC is three weeks behind in processing the
applications.

The primary aim of lawyers is to *perpetuate* disputes until they have
exhausted their clients' bank accounts. They aren't there to *settle*
conflicts. There's no money in that.

> KN6PL

Traditionally, this is accomplished by mirroring the antenna element
as a counterpoise or ground plane. A true ground rod is not even
required, although it is good practice for DC/AC grounding of generators,
to prevent electrical shock to ground where generators are used.

I use a military screw ground rod (a 24 inch thing that literally screws
into the ground to provide a large surface area for ground contact),
when operating portable, and that works fine. A 4 foot ratshack ground
rod will work fine. A long screwdriver will also effectively work when
the ground is relatively moist.

The important point is to think about what your power source is, what
your antenna is, and how to coordinate them. For example, if you are
using a dipole fed with a half wave line, then a ground is not even
required, in battery operation (always ground in generator operation).
If you are working an end fed wire against a ground, use a counterpoise
to provide the ground, and a small grounding rod of some sort if you are
not on battery power. If the operating position is at a point where
a high RF potential is likely to exist, ground it and/or use a counterpoise.
Size your counterposises, accordingly, and whether or not you are at a high
or a low rf energy point (relatively a 1/2 or a 1/4 wave counterpoise).
If the operating position is at a low RF potential point, you theoretically
don't need to ground, but it is probably wise to do so anyway. If you are
using generators, always ground.

If you use a hard-to-remove ground rod of some sort, carry an old-timey
auto jack with you, and a couple of vise-grip pliers to provide a point
to jack the rod out with. Vise-grip on the pliers and jack the rod out.
A chain will often work, in lieu of vise-grips.

All of this pertains to portable operation only. Always ground at any fixed station location. Always ground where generators are used, since they can pick up considerable static charge if ungrounded, on any exposed metal parts. It also cuts line noise if generators are grounded. Ground at the generator and at the operating position.

Good Luck and be safe.

nancy@carcs3.wustl.edu wrote:
> Who invented Morse code?

Many folks. It actually dates from around 1730, in various forms.
Morse ``perfected'' the default American version, as opposed to
the numerous early Continental codes.

> Seems obvious, but I read an article somewhere, within the last three
> years, which stated that it was Morse's assistant (I forgot his name)
> who REALLY devised the Morse code.

You are probably referring to Alfred Vail, who was later to become
the U.S. Superintendent of Telegraphs.

> Can anyone verify (or debunk) this? Does anyone else remember
> the article and magazine?

Vail's original work dating from about 1849 is reprinted on the
Glowbugs archives, piobaire.mines.uidaho.edu/pub/Glowbugs.
If you have a postscript printer, go print it out and read the
original info. There were approximately 8 different alphabets
``invented'' by Morse/Vail, although only one has survived.

>VC won the psychological war, which is also part of guerilla warfare.
>Regardless of who was backing them, the VC or North Vietnamese won using
>guerilla warfare, not conventional techniques.

You are wrong. After Tet, there wasn't enough of a VC force left alive to pose a credible threat to anyone. Tet ended the VC as a fighting force. It was the greatest US military victory of the war. After that point, only NVA regulars were capable of fielding an effective force. And after we moved into Cambodia, they ceased to be able to get that force into the field in South Vietnam. (We'd already stopped them at the DMZ.)

At that point, the countryside was effectively pacified, and the US started the "Vietnamization" of the war, IE bugging out on our allies. But when the US withdrew, the North was able to pour regular troops over the border, and the ARVN were unable to stop them. The fall of Siagon had NVA battle tanks closing on the city, and NVAF aircraft gaining dominance in the air. It was a standard conventional war. And the North had more troops, more espirit, and massive Soviet arms aid to equip them. (We ceased even supplying arms to the ARVN when we pulled out.) The fall of South Vietnam was definitely *not* a guerrilla war.

Of course you are correct that the war was actually lost on the US domestic political front. When the US withdrew, it was inevitable that the NVA regulars would be able to roll over the unsupported and unsupplied ARVN. (They effectively lost most of their artillery, armor, and air support when we cut and run.)

The VC were never a decisive factor in the war militarily. It was exploitation of their *image* that helped turn public opinion at home, IE the myth that they were everywhere, and that we were unable to contain them. Tet was used politically to claim we couldn't deal with the VC when in fact it proved just the opposite. We virtually wiped them out. Yet domestically Tet was seen as a defeat rather than the great victory which it was.

>Also, the economic boycott of South Africa was not universal. It was
>not the only reason for the change of government.

Name another factor which threatened to crush the South African government. It certainly wasn't guerrillas on the border. That problem was well in hand.

>The US colonists did not destroy the British by main force yet they >still won. Although, you did say generally. ;-)

The American Revolution was a sideshow to a bigger global conflict between European powers. If it weren't for the material aid of France, and the tying down of the main part of British combat power in other arenas, the colonists wouldn't have gained a victory. And Washington's army *was* an army in the traditional sense. It was not a guerrilla force. It *did* fight conventional battles, and did obtain the surrender of Cornwallis by conventional force of arms (and the threat of a French fleet appearing at his rear).

There were some guerrilla type actions in the Revolutionary War, particularly in the South and on the western frontier, but they didn't decide the outcome. The Continental Army may not have had the pretty red uniforms of the British, but it was an army, and fought as a conventional army. (Though the Americans had enough sense to make use of available cover while the Brits used the traditional massed volley of the "thin red line". But that's just a matter of tactics, and doesn't mean the Continental Army was a guerrilla force.)

This is *completely* off topic. If you want to continue it, take it to a military history newsgroup.

3628. Modification Info Kenwood TM-261A

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-25 00:00:00 UTC
From: bclinton@whitehouse.gov
Message-ID: <347c21c3.244657388@news.abts.net>
Source record: 185966

Looking for information on how to modify my Kenwood TM-261A (144mhz FM Transceiver). I want to be able to TX from 136 to 174 Mhz.

Either post or Email me at tobyw@abts.net if you can help!

Thanks in advance!

Brad:

FYI, "broadcasting" is illegal per the FCC rules, which I hope you read prior to taking your exam. You might want to check this section again.

I agree....these people stop by frequencies, listen for a few minutes, and then bless us with their "observations" as if these postings have some value and will do something to advance their beloved hobby. You often get these people to go one step further, judging who is right and wrong in one night of listening, when the problem actually dates back to a decade ago or more.

They have no idea of who the participants are or any of their motivation for doing what they are doing. When an unidentified transmission occurs, they make half baked guesses as to who made it and post it here and elsewhere. When they hear a word that *they* wouldn't use (lest their mommy take down their little blue velvet shorts and spank their rosy bottoms), they come up and enlighten us with a post about a frequency's inhabitants being "bad".

I'm sure their heart is in the right place, but all this crying just wastes bandwidth and they have no prayer of making a difference. They might argue that "I am calling attention to the problem, and then we will band together and do something about it" Well first, only newcomers think that everyone else doesn't know about the "problem", and second, they can do nothing about it, at least immediately. The FCC does not enforce so there are only two remaining possibilities 1) physical threats (A popular choice for the truly ignorant. Such threats are never carried out and are ignored except by other stupid people. i.e. if you want to hear some of this, listen to the guys on 3901, 3865, and elsewhere with all their silly threats of violence each night. These guys are not all that smart) or 2) direct reasoning with the participants. Option 2 can only be exercised through an understanding of the people and their motivations, and these whiners clearly do not have it.

Trust me, very few people who feel "forced" to learn anything will
actually enjoy using it, or be enthusiastic about its use.

A few will learn to like it, but for the lion's share, I highly doubt
I will ever QSO any of them on the air.

Source record: 185823

Stan:

IMO, this sort of childish behavior with the web pages and all the threats you hear on 3901 and elsewhere reflects the continued "dumbing down of America".

Because these people are not capable of reason, they need to resort to force in whatever form works for them. For the truly stupid, it's physical violence. For those that are one notch above moron level, it's trying other ways to silence their enemies rather than argue the point.

I understand that to argue a point with your enemy can be fruitless if your enemy is what is commonly referred to as a "brainless twit". In that case, just ignore him, let him ramble, and let others see him for what he is. The problem is that you have to have some intelligence, patience, and maturity to take this approach, and those qualities seem to be rare these days.

FWIW, I have no problem listening to or reading anyone's views. I'll then make my own judgements about the merits of their "argument". I resent these uneducated, immature, low socioeconomic types attempting to make my decision for me.

Dave

Closed Circuit Advisory

According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation over the winter months. As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you.

If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P. O. Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1057, for release on Friday, November 14, 1997 to follow.

<*>

The following is a QST

Ham radio is there as a typhoon hits the Marianas Islands, WRC continues in Geneva and a watchdog group says its time to make changes in the FCC. These stories and more on Newsline report number 1057 coming your way right now!

<*>

Super Typhoon hits Marianas Islands

Ham radio became the only method of communications left after one of the worst typhoons in recent history hit the Northern Marianas Islands.

Super Typhoon Keith packed top winds of 165 miles per hour with gusts of 200 miles per hour as it slammed into the island of Rota on Sunday night November 2nd local time.

According to news reports, all normal means of communications with several islands was lost around 3 AM. At that point government officials and relief agencies turned to ham radio as the only remaining link to several islands during the storm. At air time, little else is known about the service provided by radio amateurs during and after the storm.

Newslines Jim Meachen, ZL2BHF, in Aukland is following up on this story. He will have an update in a future report.

(Via Newsline, on-air reports, published reports)

<*>

WRC - 97

Word out of Geneva, Switzerland indicates that things seem to be going pretty well for ham radio at the 1997 World Radiocommunications Conference. ARRL observers at the gathering indicate a compromise proposal from The Netherlands for a secondary allocation at 432 to 438 MHZ for the Earth Exploration Satellite Service failed to gain sufficient support for

adoption.

Instead, it appears that a resolution will be proposed to conduct urgent studies of the best band for such a satellite to operate in. Proponents say that these satellites function best between 400 and 500 MHZ, so this one needs to be watched.

Meantime the so called Little LEO satellite people are having a tough time convincing any delegates to support their demands for added spectrum. While nothing is firm, the conference appears to be moving toward agreement that the segments 146 to 148, 170 to 230, and 406.1 to 430 MHZ are not open for consideration for Little LEO allocations at this time. More important, there has been little support outside Region 2 for any new Little LEO allocations. Most of the Little LEOs interest has focused on 401 to 406 and 450 to 470 MHZ, with some possibility of future studies of possible compatibility with broadcasting at 470 to 862 MHZ.

WRC 97 is nearing past the halfway point with some issues moving toward settlement and others still very controversial. For up to the minute updates on the conference we suggest that those of you with computers visit the Leagues official bulletin site on the world wide web. Its at:

www.arrl.org

(Via ARRL)

<*>

ARRL E.C. actions

Planning for the future was one of the top items on the minds of the ARRL Executive Committee, when it met recently in Philadelphia. The group voted that the President and Executive Vice President should develop a plan to reinitiate the strategic planning process. This is basically a look ahead committee to plan for changes in the way that the ARRL will function as technology brings changes to the world of Amateur Radio.

The EC has also agreed that the League will file in opposition to a waiver request and petition for rulemaking by Sierra Digital Communications Inc. Sierra Digital wants increased power for an unlicensed point to point data communications link operating under Part 15 rules at 24 GHz. The League says no.

There may soon be a new class of International membership in the ARRL. This as the result of an Executive Committee decision to recommend the creation of such a category to the full board. International members will be made up of present Associate members who are licensed but are not eligible for Full membership.

Finally, committee will also recommend to the Board that the Technical Excellence Award be renamed the Doug DeMaw Technical Excellence Award. This as a way of creating a lasting tribute to this great technological pioneer who passed away a few weeks ago.

Changing the awards name has been requested by several League members who have earned this award.

(Via ARRL)

<*>

FCC confiscates equipment from unlicensed radio operation

The FCC appears to be taking a new hard line approach in dealing with people who broadcast without licenses. On November 6th the agency acted to confiscate radio equipment used by a Kansas City, Missouri resident that the FCC alleges was using it to operate an unlicensed FM radio station.

The unidentified station owner had been warned by FCC officials that unlicensed broadcasting was against the law. He apparently did not heed the warning. As a result agents entered the premises where the radio transmitting equipment was located and confiscated it.

It has been several years since the FCC acted to seize radio equipment from any unlicensed operator. For over a decade, most punitive action has come in the form of fines -- many of which have gone unpaid. If the commission is reverting back to its old policy of confiscating station equipment as a way of ridding the airwaves of unlicensed stations, it will signal a new wave of enforcement activity long sought by the licensed broadcast community. It also could have a ripple down affect on stations bootlegging in the ham radio bands.

(From FCC Digest)

<*>

Report recommends reorganizing FCC

The group called Citizens for a Sound Economy Foundation has released a report recommending to the Federal Communications Commission specific measures to streamline the way it regulates the airwaves. Among the study's recommendations is that the FCC consolidate mass media functions that are currently performed by three bureau into a single bureau. The study also suggests that the FCC eliminate duplication in regulation between the FCC and other federal agencies; that it establish sunset dates to enforce timetables for deregulation and eliminate its own ability to adopt regulations governing mass media content unless there is express statutory authority granted.

The report, titled "Mass Media Regulation and the FCC: An Agenda for Reform," was prepared by Robert Corn-Revere, a partner with the law firm of Hogan and Hartson. Corn-Revere previously served as legal advisor to FCC Commissioner James H. Quello and was chief counsel during Quello's term as chairman of the FCC.

(Via press release)

<*>

FCC sets RF safety level for repeaters

Meantime, the FCC has released a clarification to its RF safety rules that sets 500 watts effective radiated power as the limit for most amateur repeaters. This, before a routine RF safety evaluation would be required. A safety evaluation will be required for any repeater running more than the allowable 500 watts effective radiated power that uses a building mounted antenna or a non-building mounted antenna with a height of less than 10 meters above ground level. This new standard applies to all amateur radio repeater systems on all bands.

(Via FCC release)

<*>

Elected and will serve

Two hams have won public office in California. In the south, Jeff Reinhardt, AA6JR, has been elected to the Agoura Hills City Council in the general election held on November 4. Meantime in Northern California Fred Fowler, KE6EPM, won election to a seat on the Sunnyvale, California, City Council the same day.

(Via ARRL)

<*>

Indaina Goblin Patrol

Halloween for hams in Johnson County Indiana did not turn out to be as frightening as some had expected. They were prepared even though the police weren't.

Nearly a dozen amateur radio operators took to the roads around the county on beggars night in a effort to assist local authorities in preventing Halloween pranks. The only reported incident came when net control Bill Brinkman, AA9UV reported to the Emergency Operations Center to run the net. It seems the local sheriff had just changed all the locks in the building and no one could find the key to the ham radio room.

So Bill ran to the home of Joe Rogers, KF9QL where he commandeered Joes base station for the net. Bill used the direct telephone line to the dispatchers center for communications.

No other major incidents were reported.

This is the 11th year that the Mid-State Amateur Radio Club has operated the "Goblin Patrol" in Johnson County.

(Via Amateur News Weekly)

<*>

Mt. Beacon members assist NY State Police

Further east, twenty-five members of the Mt. Beacon Amateur Radio Club assisted New York State Police in their 1997 Halloween Pumpkin Patrol. Working as the eyes for the agency, members of Dutchess County's largest

amateur radio club had observers posted on all the bridge overpasses of Interstate 84 on Halloween evening.

Linked by amateur radio to New York State Police dispatch centers in Albany, members watched for any instances of vandalism, throwing of objects onto the highway, and property destruction. This was the seventh year that the club assisted in this effort.

(Via Hudson Division Loop)

<*>

Alleged dealer in police radio codes arrested

The Miami Herald reports that Metro-Dade County Florida Police recently arrested a man and charged him with dealing in stolen property. The property in question is the highly secret digital coding to the encrypted police radio system.

Prosecutors allege that the man programmed radios with Metro-Dade frequencies and sold them to anyone willing to pay his asking price. Detective Steve White, a member of Metro-Dade's Economic Crime Bureau and High-Tech Crimes Squad says that his department does not even know how he got hold of the propriority program software to do this.

But there is one clue. The Herald story says that the FBI has been investigating the same person for computer fraud and copyright infringement since December. This, after agents raided his home and business and seized a stash of radios, computer equipment and diskettes.

Metro-Dade police began their inquiry several months ago when they took a statement from a citizen who said he bought two modified radios for $1,300. He turned over the two radios to police and was not charged with any crime.

The radio cloner may not be so lucky. If convicted he could spend up to fifteen years behind prison bars.

<*>

Ariane 502 not a total success

The rocket that was supposed to have carried the AMSAT Phase 3D satellite into orbit has been launched, but it was not an unqualified success. The European Space Agency's Ariane 502 launch took place on October 30th. Flight data analysis now indicates the Ariane 5's second stage engine may have shut down early causing the payloads to go into lower than expected orbits.

AMSAT's Phase 3D satellite had been scheduled to fly on Ariane 502. It was dropped in late August when it became clear that the ham sat would not be able to meet new flight vibration and stress requirements in time for launch. At air time, AMSAT officials are still negotiating for a ride to take Phase 3D into space.

<*>

Mir contacts with schools back on

Live contacts between a United States astronaut on the Russian Mir space station are once again a reality.

The Johnson Space Center has given the ok for schools to start scheduling contacts with the Russian Space Station Mir. U.S. Astronauts David Wolf, KC5VPF, the current U.S. Astronaut aboard Mir will be the first to resume contacts with U.S. Schools from Mir.

Mir's overall health appears to be improved now that a new computer has been installed. A series of problems aboard Mir including several computer failures has curtailed school contacts in recent months.

For more information on setting up a school contact with the Mir, get in touch with the Educational Activities Department at the ARRL. E-mail is the quickest to:

sarex@arrl.org.

(Via Amateur News Weekly)

<*>

Foale about Mir

Ham radio operator and Astronaut Mike Foale, KB5UAC, spent much of his Mir mission trying to console his distressed Russian commander and reassure him that the nearly catastrophic collision wasn't all his fault and that being banned from spacewalking wasn't so awful.

In his first news conference since returning to Earth, Foale described his Russian crewmates as misunderstood heroes and recalled his attempts to cheer up commander Vasily Tsibliyev who assumed that he might be blamed for the crash. Tsibliyev was guiding a cargo ship by remote control in a docking test when it slammed into the Russian space station on June 25th.

VE operating privileges on 10 meters

On the international scene, Radio Amateurs Canada says it has been receiving questions concerning the operating privileges available to those Canadian hams having only a Basic certificate.

Those hams are prohibited from operating on 10 meters on any mode. To transmit on 10 meters, a Canadian amateur must have both Basic and 12 wpm certificates. This includes he FM repeaters between 29.5 and 29.7 MHZ.

But Canadian Basic certificate holders can operate on voice repeaters that input on 2 meters and output on 10 meters. The 2 meter voice repeater

which outputs on 10 must be licensed to an amateur who also would have the qualifications necessary to transmit on 10 meters. As such, he or she would be in legal control of the repeater.

(Via Radio Amateurs Canada)

<*>

DX

In DX, VK9NS may soon be on his way back to operate from Buhtan.

Reports say that Jim is having his visa application processed and he will be meeting the Bhutanwese Ambassador to Bangladesh in Dhaka. For those who do not know, VK9NS was previously active from Bhutan in 1990 as A51JS.

Also, a group of German operators will be on the air from Libya from November 24 through December 4th. Activity will included the CQ World Wide CW Contest as a Multi-Single entry with two stations on the air from the 5A1A club station. QSL via DL3KDV.

(Via various DX sources)

<*>

TWIAR Event

Our friends at the satellite delivered ham radio bulletin service "This Week in Amateur Radio" will celebrate their Fifth Anniversary with an on the air Special Event Station.

Producers, staff members and affiliates will be given the opportunity to operate all bands and modes using the special event call sign W2T. The call will be in use from February 28th to March 14th, 1998. A special commemorative card will be offered to all stations worked who send their QSL and an SASE. For more information about this commemorative event contact the shows producer Stephen Anderman, WA3RKB by e-mail to:

sanderman@delphi.com

or tune into This Week in Amateur Radio using your home Ku band satellite dish.

(Via TWIAR)

[1058]

CLOSED CIRCUIT ADVISORY

The following advisory is not for transmission. Once again we are forced to ask our listeners for their financial support.

According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the end of the year. After that, Newsline will again exist on a week to week basis. So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline
c/o Andy Jarema-N6TCQ
P. O. Box 660937
Arcadia, California

91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1058 for release on Friday, November 21, 1997 to follow.

<*>

The following is a QST

The FCC begins soliciting registration for its Universal Licensing System and more on RF exposure limits at repeater sites. These stories and more on Newsline report number 1058 coming your way right now!

<*>

FCC INITIATES UNIVERSAL LICENSING SYSTEM

A new FCC license registration process is underway. As a first step in implementing its new Universal Licensing System, the FCC's Wireless Telecommunications Bureau is attempting to "populate" the ULS by getting licensees to voluntarily register.

The Universal Licensing System is aimed at combining the current eleven different licensing systems including Amateur Radio into a single system. ULS registration requires supplying a Taxpayer Identification Number and your callsign. This could include your individual callsign plus any club station callsigns for which you are the trustee.

Ultimately, the Universal Licensing System will give hams and other licensees on-line access to make license updates and renewals. This will eliminate the need for hardcopy forms like the venerable Form 610.

(Via FCC, ARRL, Others)

<*>

FLORIDA PIRATE RADIO STATION RAIDS

Heavily armed federal agents raided two Tampa, Florida area pirate radio stations before dawn on November 19th. Arresting one operator and seizing equipment at both locations.

One individual had operated on 96.7 was taken to jail on contempt charges according to federal sources. His equipment had been seized 1996, but he had immediately resumed broadcasting, in violation of FCC orders.

A second station known as the "Party Pirates" operating on 102.1 from Temple Terrace, Florida. He had been featured on a front page story in the Wall Street Journal. In that article an FCC District Engineer had been quoted as saying, "I'll get him". Now he has had his way.

The equipment at 102.1 has been seized and the FCC has upped the ante dramatically in the war on pirate broadcasting.

(Via Newsline)

<*>

MORE ON REPEATER RF EXPOSURE

An update on last weeks story dealing with maximum RF exposure limits placed on ham radio repeaters. Many hams and others appear confused when reading the Commission's Second and Third Erratums on this subject without the original document in front of them. Many are dependent on news services such as ours, the ARRL Letter and the W5YI Report to explain it to them. And the biggest question on the lips of a lot of repeater owners is why a safety survey has to be conducted if a repeater is at a remote site.

A very simple answer is provided by broadcast consultant Bob Gonsett, W6VR, of Communications General Corporation in Fallbrook, California. Bob says that you must do a routine human exposure to RF signal analysis whenever two or more transmitting antennas are in the same vicinity. This, even if they are not owned and operated by the same party.

The reason is that the government is very much concerned about the total amount of radio frequency signals at a given location, and just which frequencies are involved. In order to calculate this, you have to know a lot about all the antennas at the site.

W6VR adds that the detailed language on all of this is contained in an impressive new FCC publication known as OET 65 and the just released Supplement B with still more information for hams. It's a lot of reading, but well worth it to keep your shack and repeater site legal.

(Via W6VR, Newsline)

<*>

NO TV AT HIS HOUSE

One of the FCC's new commissioners does not own a television set.

Commissioner Harold Furchtgott-Roth told reporters on Tuesday, November 18th that he does watch television, but only does so in the capacity of his job at the FCC office. When asked if not having a TV at home will interfere with his job performance, Furchtgott-Roth said that if something requires his watching a program, he will find a way to see it.

Furchtgott-Roth says he has five children and several radios in his home. He refused to tell reporters why he does not have a tv set, but says that he has a home computer. However, he added that the computer is not connected to the Internet.

<*>

HAMVENTION TO STAY AT HARA

The Dayton Hamvention will be staying at its longtime home at the Hara Arena.

The Dayton Amateur Radio Association has announced that they have signed a 5 year agreement to keep the Dayton HamVention at the Hara Arena. The 5 year contract represents the longest contract in the history of the Dayton HamVention and Hara Arena.

Publish reports in the Dayton Daily News have reported Hamvention officials were considering the possibility of moving HamVention out of Dayton, OH following the conclustion of the 1998 HamVention.

HamVention attendees bring in a reported $7 million in revenue to the Dayton area each year.

By the way, the 1998 Dayton Hamvention will take place from May 15th to the 17th. Newsline plans to be there.

<*>

AMATEUR HURT IN HAMFEST EXPLOSION

A ham radio operator has been hurt in a hamfest explosion. Jose Martinez, WA4VUZ, of Pembroke, Florida, was seriously injured when his motor home exploded during the Palm Beach County Hamfest the weekend of October 18th. According to a report in the October 20 edition of the Sun Sentinel newspaper, the explosion was caused by a leaky propane gas tank. Martinez reportedly suffered burns. He was transported by helicopter to a hospital in the wake of the early-morning blast and was reported in satisfactory condition. Another man also was injured. The newspaper said that hams at the gathering took up a collection for Martinez, a regular at the Palm Beach County Hamfest.

(Via ARRL)

<*>

SKYWARN COORDINATOR INJURED IN ACCIDENT

And Joe Miketta, the Meteorologist in Charge of the SKYWARN program for the National Weather Service in Mt Holly, NJ, was seriously injured in an auto accident on Saturday, November 1st.

According to Paul Toth, KB2WNZ, the Section Emergency Coordinator for Northern New Jersey, Miketta was on his way to work when his vehicle was broad-sided by another car that ran a red light. He was admitted to the Intensive Care Unit at Cooper Medical Center in Camden, NJ, suffering from a broken pelvis, cracked ribs, and other injuries. He is expected to recover, but it is not known how long he will be in the hospital nor how long he will be out of the office.

(Via Hudson Division Loop)

<*>

CHANGES AT SERA

Some major political changes may well be coming to the South East Repeater Association. This with the announcement that two of its longtime leaders are stepping aside.

Dave Shiplett, AC4MU and Ray Adams, W4CPA have announced that they will not stand for re-election. Shiplett has spent the past twelve years involved in repeater coordination with Sera. For the last six he has served as the organizations president. He also serves on the board of the recently formed National Frequency Coordinators Council or NFCC

Ray Adams, W4CPA may be better known to the nations ham community under his previous call of N4BAQ. He has SERA's treasurer since 1981 and has an unbelievable sixteen years of volunteer time under his belt. Ray's new call sign is very apropos. By trade a Certified Public Accountant with his own accounting firm in Knoxville, Tennessee.

The South Eastern Repeater Association on which both men served is an umbrella group of recognized repeater frequency coordinators providing service to over 1,950 repeaters and their owners along with almost 100,000 users in nine south eastern states.

(Via Repeater Journal)

<*>

SCRRBA RETIREES

And the face of repeater coordination politics in Southern California is changing as well. This with the announcement that Bill Kelsey, W6QC and Robin Critchell, WA6CDR are stepping aside from elective office in the Southern California Repeater and Remote Base Association. This, after two and a half decades of service to the regions ham radio community.

The Southern California Repeater and Remote Base Association is a direct descendant of the old California Amateur Relay Council. CARC was the nations very first coordination group established in the early 1960's and gave birth to several smaller groups that became the basis of all volunteer coordination efforts across the nation.

Kelsey and Critchell were two of the original founding members of the Southern California Repeater and Remote base Association and have helped guide the group into one of the most politically powerful regional coordinators in the nation.

Replacing Kelsey as president is Joe Sadler, WA6PAZ with Mike Penrose, W6ADF as the organizations new Treasurer. Both Kelsey and Critchell will remain with the coordination group in advisory roles.

(Via Newsline)

<*>

HAM TEACHER AND PBS

A ham radio operator says that she was the person who created the curriculum for a recent Public Broadcasting special. Educator Missy

Hollenbeck, AA0OF, says that PBS contacted her to write for their project "Lewis and Clark: A Journey of the Corps of Discovery." She says that the show needed a teacher who could write language arts lessons plans that could be later downloaded from the PBS Website. This, following the Lewis and Clark special" that aired on November 4th and 5th.

Hollenbeck says that her job was to incorporate as much technology as possible into the lessons. She says that this gave her the ability to included ham radio. The material includes links ARRL for more information regarding amateur radio activities in the classroom.

The lessons can be found at:

www.pbs.org/lewisandclark/class/idx_les.html

(Via ARRL)

<*>

AOL HARDWARE FAILURE

Hams and others who send their electronic mail via America Online were unable to do so twice within the past month. America Online says the first problem occurred around 2:30 pm Eastern Standard Time on October 29th. The problems kept users from logging onto the service until about 4:40 Eastern after which hardware fixes allowed log-ins, but e-mail service remained down. At 5:30 pm software problems added to America Online's misery. After that, users who logged on could use most AoL services but e-mail remained dead for several more hours.

The second outage occurred around 9 am Eastern Time on November the 18th. E-Mail was out for about an hour after one of AOL's server computers malfunctioned. America Online says that fixes now being implemented should avoid e-mail problems in the future.

(Via published news reports)

<*>

RS CHANGE OF HEART

A Gaithersburg, Maryland ham says that he has won a major victory for everyone who experiments with electronics and communications gear. This after organizing a grass roots campaign that forced Radio Shack to provide him with a schematic diagram of his scanner radio.

All Ron Dunbar, W4FP, wanted was a schematic diagram for his PRO-38 scanner. So he sent e-mail to Radio Shack, only to get a surprising response:

"I got the message back that said, no do to requests from the Federal Communications Commission we're not able to give out schematics for any scanning type equipment anymore." W4FP

Dunbar decided others needed to know. So he went to the Internet, posting a note to the VHF reflector.

"All hell broke loose. I guess e-mails went to Radio Shacks all over the country all over the world" W4FP

Dunbar sent a second note to Radio Shack challenging any suggestion that the FCC was behind an effort to withhold schematic information.

The following morning, Dunbar had another message from the company, this time Radio Shack apologized, said its previous message was incorrect and offered to make his schematic available.

Dunbar says he knows Radio Shack got an earful, that's because he received copies of messages other people sent to the company.

"Some of them were really barnburners, they were, a couple of guys were really hot and heavy. One was an editor of a magazine which shall remain nameless that had to do with the IEEE. And he mentioned that he was going to put this information the next editorial and it would hit thousands and thousands of engineers across the country." W4FP

Ron Dunbar has his schematic now, thanks to what he says is the power of a lot of other people making their feelings known.

Dunbar told Newsline that he believes the entire incident was probably the result of some low level company employee who was unfamiliar with Radio Shack policy and simple made a mistake.

(Via Newsline)

<*>

GOOD VIBRATIONS

How do you get good publicity for ham radio? Simple. Live not far from a town with the word radio in its name. Members of the Porter County Amateur Radio Club in Indiana do, and on October 4th the club sponsored its third special event station from Radioville.

Yes Virginia, there really is a Radioville, Indiana and to celebrate the club set up K9PC in an open field across the street from a busy state park. They used a pair of operating positions and were on the air for only about five hours. But that was more than enough. Several newspapers turned out to chronicle the event and a television documentary incorporated footage of ham radio on the air in Radioville.

(Via Amateur News Weekly, NT9J)

<*>

SPACE STATION COMPLETION DELAY

NASA now says it wont have the International Space Station fully assembled until December 2003. That's 18 months beyond the June 2002 date announced earlier this year. NASA had hinted at the slip last spring. This, when it

delayed the beginning of the stations assembly by seven months after Russia failed to deliver crucial hardware on time. This pushed completion of space station into 2003.

NASA has pledged that the U.S. habitation module, the astronaut living quarters will be fully outfitted by December of 2002 and promises a crew on the station starting before 2002 ends. The delay means that the activation of the ham radio gear on board space station will also be postponed.

(Via published news reports)

<*>

ARRL ORBITAL CALENDER QRT

The ARRL's support of the OSCAR locator is going away. For some years now, the League has offered a monthly orbit calendar for use with the OSCAR locator. According to Jon Bloom, K3EZ, requests for this monthly listing have dwindled to less than a half dozen. As a result, the League plans to end this service at year's end.

(Via ARRL)

<*>

NEW SMIRK WEB PAGE

N0EOQ and KA0NNO have created a whole new domain and have moved the Six Meter Amateur Radio Club, or SMIRK web pages over to it. Its a very easy URL to remember. Look for it at:

www.6mt.com

(Via SMIRK)

<*>

DX

In DX, keep an ear open for A special French operation. F5SJB will be using the callsign TM5CW from November 22nd to December 1st.

And look for Micronesia on the air for the next few months. V63BR is reportedly now active on RTTY. QSL via AA4US or direct to:

Aston Nakayama
P.O. Box 305
Chuuk Island
Micronesia

Also, if you heard the Russian Sputnik 40 satellite and want a commemorative QSL, here is how to get one. Reception reports go to The Radio Club of Jules Reydellet school on Reunion Island. Those whose reports are confirmed will receive an approximately 6x9-inch color certificate on high quality paper with number identification and the radio club stamp. Requests for these certificates should be made only by letter

and accompanied with an 6x9 inch SASE and two IRC's. The mailing address is the:

FR5KJ Radio Club
103 Rue de la Republique 97
489 Saint Denis
Cedex, Reunion Island.

And less we forget. E-mail requests will NOT be honored.

(Via various DX newsletters)

<*>

NEW BOB HEIL CD

And finally, any DXer will tell you that there is no better microphone for busting a pile-up than those supplied by Heil Sound. Company owner Bob Heil, K9EID, is considered one of the nations leading authorities in the area of sound reinforcement. He used that knowledge to develop a microphone system that makes signals seem to pop out of the noise.

But there is a lot more about K9EID than great sounding DX. According to the St. Louis News Democrat, Bob is also credited with revolutionizing the sound of live concert rock. He worked in sound reinforcement with a number of legendary rock groups including the Who and the Grateful Dead. But what few hams are aware of is that both of these accomplishments may well be the result of K9EID's first career as one of the nations most talented theater organists.

Bob began his professional career in 1956 playing at the Fox Theater as a prot,g,e of master organist Stan Kann. But his career in the sound reinforcement and audio product development business took him away from playing professionally for the better part of the past thirty years. Except for a guest appearance at the Dayton Hamvention banquet almost a decade ago Bob remained out of the performing spotlight.

"In 1982 I retired off the road. Just absolutely got tired of traveling with all of that. Here's a guy that never drank beer or smoked a cigarette and I'm running around with all these crazys. I decided that I had enough of that.

So I once again came home and got back into ham radio. And doing that I started finding out, My gosh what happened to all this beautiful audio that Art Collins had back in the '50's when I left it.

It was destroyed by these horrible microphones and so that is how we got into building the Heil line of microphones." K9EID

His interest in public performing was rekindled after Richard Wright installed a new 3 manual, 15 rank organ at the Lincoln Theater in Bellville, Illinois. That's just across the Mississippi from St. Louis an it gave Bob the opportunity to once again play before an audience. This lead him to record his first album for public release. It is a CD that

really took three decades to complete:

"We've just cut a brand new compact disc at the Lincoln. And an interesting part of that was we went back and found some master tapes that were 31 years old. We mastered them digitally and put a few of those on this compact disc as well as the new things from the Lincoln." K9EID

So now you know that there is a lot more to Bob Heil than great sounding DX audio. He promises to have copies of the CD available at his booth at the 1998 Dayton Hamvention in May. But if you can't wait, you can get more information by sending e-mail to:

bob@heilsound.com

Or take your web browser to:

www.heilsound.com

and click on Bob Heil's name.

(Via Newsline)

Oh puleeeeze... Censorship is a pretty powerful word. You and Dave seem to be implying that I am mounting a campaign to trample some basic right O'Brien has to talk shit about anyone. Is that what you think I am doing?

Based on everything he has ever posted to the r.r.a. newsgroups, I have come to the conclusion that O'Brien is a redneck punk. Take a look in the archives for yourself. Take a look at his web page.

If O'Brien has a right to post the kind of crap he is known for, and maintain a home page that does nothing but defame people he doesn't like, don't the rest of us have a right to say "O'Brien is a worthless asshole"?

As for the "bandwidth" of his page - it seems Mindspring limits the number hits a page can get under certain subscription plans. His page is accessable, so I access it. If a number of people decide to access it often enough that the page reaches it's monthly hit limit in a week, so what? No one is throwing him off the Internet.

Like I said, go read his page (you add to the counter when you do it - fine with me) and then go through the archives of his posts to r.r.a.* Then tell me how this guys has any credibilty when he says he going to help clean up amateur radio. Sounds to me like he wants to clean it up by putting everyone in white hoods. He has a "right" to his attitude and his opinions toward other people - but the rest of have the same right to opinions about him.

Hi
There is a new Web Site where you can place an advert for all your
unwanted personal Computer bits and Amateur Radio gear absolutely
free, yes free, or maybe find a particular item that you need.
So point your browser to :-
http://www.ndirect.co.uk/~dave.regan
Hope to see you there soon.
PS Only private adverts please.
Amateur Radio enthusiast do it on the air waves.

>filtering.
>

Sounds good. I agree that a 10m CW/SSB/FM handheld would be good
(it would be so wired that the PTT button doubles as the Morse key on
CW).

As for the other bands, a handheld wouldn't be as successful as on 10m,
unless hooked up to a better antenna (though a dual band 10 & 6 metre rig
might be a goer). Also having 40 & 80 metres would be worthwhile
especially if the handheld was supplied with a wire dipole antenna or
similar.

The closest we have to an all band handheld is that Index Labs QRP rig,
which could be a good starting point - this would be useful for people to
try to see if handhelds are really practical on the other bands or not.

There are two main reasons why handhelds are not ideal, and that a more
substantial (larger) rig in an over the shoulder bag is best. These are:

1. Antenna. I use a 1.7m fibreglass whip. Any flexing of this wouldn't
be good for the handheld's antenna connector. I prefer using a standard
mobile mount instead. This may be too big to fit on a compact handheld.

2. Battery. A 6AH gel battery is fine for an opening of several hours,
such as what a handheld rig would be used for. Internal batteries would
not last as long.

I've been doing a bit of work pedestrian mobile on 10m with a converted
CB. It's been very successful with local VK and ZL stations (up to about
1500-3000km) during sporadic-E. Best time was a few nights ago when 10
contacts were made in a little over an hour's operating.

yeah, I agree with it. Some people do have more skills in technical
nature, but not in morse.

> Some people will say the this will open the door to the CB
>attitude......Lets face it, you have that now on HF with licensed amateur
>operators that have passed the STUPID FCC EXAMS.

think of VHF and UHFs. after no code exam is established and VHF
bands and above opened to no coders (in most countries ?). do the
no coders behave very stupid ?? same as CBers ?? well... think
it again.

Curtis:

You do indeed have a right to your opinion about him. And it's your right to mess around and use up the bandwidth.

But why don't you let the thing speak for itself? You're doing your cause more harm than good.

For me, besides the censorship thing, the other issue is that I have met Jim on the air and talked to him and he was always 100% friendly and gentlemanly toward me. He has his own way of dealing with his enemies, and his page reflects that. Most people who run across it would have no idea where the guy is coming from, but the page was not meant for those viewers, quite frankly. Hell, I know somewhat where he is coming from and even *I* don't understand half of what is there. He is just expressing himself the same way others do on this newsgroup and on the air.

If you think his page reflects hate or is stupid or whatever, what's news about that? If most of the people on this newsgroup with an axe to grind (like Jim has) had a web site, you'd see the same type of thing. Maybe more people should have their own web sites so some of the heat will come off of this one guy.

Dave

Brad, the FCC has limited resources just like everyone else. My son
received his call within a week or two, we were checking the FCC
database for updates. Like everything else things get backed up from
time to time.

By the way they don't give authority to broadcast, just transmit.

Tim

Perhaps they would say, "interesting mode of communication, requires little or no bandwidth, can be sent by hand without any high tech electronics, can be recieved by ear without need of demodulators and decoders. Why wouldn't everyone want to learn it?"

Yeah, and they'd worship smoke signals too as they require
no bandwidth, can be down without electricity, doesn't care
whether there are sun spots or not, etc., etc., etc. Yeah, that's
what some alien species would think alright. Methinks the
word "quaint" might come to mind.

Hi!

My friend challenged me to try find how to build a "mix up" for cellular telephone (because we were at the restaurant and the cellular phone rang and we hate it, so I said it would be great if a "mix up" for these phone existed, then he said it is impossible and I said it is possible, so he challenged me. I said I could find it in less than a week, but now it's been 4 days and I haven't found anything.

Can someone help me convince him that it can be built.

When I say "mix up", I am talking about interference, to bug the signal of cells.

Thank you kindly...

I use random wires when I operate portable and a good ground is essential. I generally try to find the building ground or use the cold water pipe in the bathroom. An easily carried, telescoping six or eight foot ground rod for portable operation might not be such a bad idea. Someone ought to design and market it.

3670. Re: Canada-Voice without CW ticket???

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-26 00:00:00 UTC
From: al7dl@aol.com
Message-ID: <19971126010101.UAA26953@ladder02.news.aol.com>
Source record: 185893

>The morse test in Canada is slightly different from the states.
>
>First, we have both receiving and transmitting test.
>
>
As with most of Masa's posts and replies, he proports to know what he's saying, when in point of fact he has not done his research. Indeed, Canada has both a required receiving and sending test. In the U.S. (where Masa seemingly proports to know apparently without having done the research), there is a receiving and an optional (optional on the part of the VE team).

>For receiving, you must write down what you hear.

Masa, same in the U.S.... Where did you hear that in the U.S. CW exams did not have to be written down. You need to research this more fully. In the U.S. an examinee is required to write down the exam and pass it in to the examiner.

>As far as the multiple choice type of quesitons (US) are concerned,
>the morse test in Canada is more strict.
>
>

Again, Masa has not done his homework (research). Not all U.S. exams are multiple choice... Some are 'fill in the blank', some may be in an essay format and some may be solid copy (at the option of the examing VE team). Also, if an examinee fails the comprehensive exam, he or she may pass by copying one minute (solid copy) of the five minutes sent.

Again, Masa, I ask you to do your research before posting information which is vague, at best, or completely errorneous at worst. Your credibility just slipped a couple of more notches.

How can I be sure of my facts? I am a volunteer examiner here in the U.S., have a copy of Part 97 and have read it. By the way, Masa, you too can download and research Part 97 for yourself through the ARRL website (http://www.arrl.org).

Bryce, K1GAX (ex AL7DL)

Source record: 185894

Just as a note, as a credibility check. Masa, having been asked repeated times to research the power limits for the Technician and Technician Plus classes for the U.S. license (listed on his web site), and after having been informed (after Masa seemed to be unable or unwilling to do the research and obtain the correct information) of the correct levels by posting, has not yet seen fit to correct them yet. This tends to cast doubt on anything that Masa posts and responds to.

Masa, please correct the information on your web site(you've had more than a month to correct it since it was brought to your attention). It is in error and tends to raise a question as to your credibility.

Bryce, K1GAX (ex AL7DL)

Hi there thank you reading this
Anyone have info for ,,
MCX100 Vhf (motorola) ie a program or info on the scan prom, I can program the Channels (Freq.) for 2mtrs, 16 to 32 Channels. But that scan has got me beat.
There is a prom for scanning .. and a prom for the channels.
Also is there any info on the FM1000 ,FM1100 philips radios, These have a 24c16 eeprom, even if I can get some thing to read eeprom out of rig. Then maybe I can work out the codes.
Has anyone got the info on the motorola syntrax plus radio ,, This radio has a 24c16 eeprom..this is a 8 pin ic.. The standard syntrax has a 16 or 18 pin prom)
Thanking you for any with these radio..
Ps I have the syntrax-plus program .(ie I can make up the file but cannot get info into radio because lackof cable) this is a Vhf rig..
roly@altu.net.au

3684. No Code Means Less QRM!

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-26 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <347BFEC6.42A@radio.net>
Source record: 185907
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

If Morse is not a license requirement,
Less operators will learn it.

Then there will be less QRM
On the CW bands!

Less competition!
This will be good for
CW operators initially.

But later on, as we die off,
It will be more difficult to
Find a CW QSO...

Eventually, in 20 years,
CW will be en vogue again,
When it will become a nostalgic mode.

Amor Powers
CW Lover

3685. One Word Per Day Morse Code Test

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-26 00:00:00 UTC

I vote for the One-Word-Per-Day Morse Code Test.
A single word will be chosen from a fixed list of 3 words.
It will be a written exam, in dashes and dots, multiple choice.
It will be weighted the same as the other multiple choice questions.
This will fulfill the requirements of treaty obligations.

Sample question:

Decode the following: -- --- .-. ... .

a. morse
b. dog
c. no

answer: a.

Amor Powers

3686. CW Threshold Reached?

Have we reached the declining CW Threshold?

Are we on the slippery slope towards loss of this mode?

With less amateur HF activity, are there less operators working CW than before? CW activity tends to see an increase during the solar minimums. With the coming peak in the solar propagation cycle, many amateurs will spend more active time on voice.

Although there are still many active CW operators, the average age of the CW op has been increasing. Use has declined to the point that it looks like there will be extremely few in the next generation.

Is CW becoming a dinosaur, driven to near extinction by the very technologies it spawned? Will it continue to exist only through the efforts of "true believers" and zealots?

Gary Coffman (ke4zv@bellsouth.net) wrote:

"That last sentence looks a little confused. NTSC is only used in North America and in Japan. The rest of the world uses variations of PAL or SECAM. That doesn't have much to do with which frequencies they use, though. PAL or SECAM can be transmitted on the same frequencies we use for NTSC."

First of all, NTSC is also used in most of Central and South America, in Taiwan, South Korea, the Philippines, Myanmar (so help me) and southern Vietnam. My point was that all the NTSC countries, aside from Japan, use the same channel plan as the U.S. and current TV sets in those countries -- often the same ones built for the U.S. market -- are likely to have tuners that can go to "cable 60," while PAL and SECAM areas use different channel plans and the tuners may not go down into the 420-450 MHz band.

"HDTV was supposed to resolve that, but the world couldn't agree on a single standard for HDTV transmission either, so we'll still be incompatible in the 21st century. <sigh>"

Depends on what you call "incompatible." The ITU has issued a Recommendation that unifies the ATSC Digital TV Standard with the Digital Video Broadcasting specification -- both use MPEG-2 video encoding, and the SCTE cable standard uses the same RF modulation system as the DVB cable and MMDS spec -- so while it still won't be possible to use a U.S.-model TV set in Europe it won't be difficult for manufacturers to mix and match demodulators, audio decoders and firmware to suit each country (i.e. a VSB-8 demod and Dolby Digital chip for North America, a COFDM demod and MPEG Audio chip for Europe, a COFDM demod and Dolby Digital chip for Japan, etc.).

Please note:

Please don't make me stupid. I know what I am talking about.

In Canada, the regulation states:

(1) Any person may participate in the operation of an amateur station
under the supervision and in the presence of a holder of a certificate
or licensed listed in section 42.

(2) NO LICENSEE of an amateur station SHALL permit a person who does
NOT hold a certificate or license listed in section 42 to operate that
station.

Section 42:
- Radiocommunication Operator's General
- First Class
- Second Class
- General Aero
- General Land
- General Marine

I was always on the understanding that 2.45GHz is the resonant frequency
of hydrogen atoms - hence the rapid heating of microwaved food. I'm not
a biologist but it makes sense to me.

I have been attempting to purchase parts for an AOR scanner for the past two weeks. NO AOR enterprise company in the United States has the parts.
In fact, the few companies that deal with AOR wanted the scanner for evaluation at $30. I know what is wrong, I needed the parts, NONE are available.

I had to go out of the country, to a company in England. They were very nice and I am working out the financial details at this time.

If you need AOR scanner parts contact Simon at AOR UK Ltd., e-mail address is: info@aor.co.uk

The AOR contact in the US is EDCO in Virginia. They don't have the parts and told me it's hard for them to get parts from AOR.

AOR, Japan wants to sell their equipment in the United States but doesn't want to support said equipment by making parts available. The hell with AOR, I will NEVER purchase another AOR product.

jr

AOR's presence in the US has always been shaky at best, having gone through 2 different distributors since the start, and selling scanners that are actually manufactured by different companies. Some of their models really qualify as "junk" while some recent rigs are well designed, well built, and very solid.

I don't find dealing with offshore dealers so bad, especially since there some out there (like Javiation UK) that are extremely accommodating.

I own an AR7030 shortwave receiver which I am very pleased with. I bought it from Javiation, and have received excellent support from Jonathan as well as Richard at AOR UK who has sent me parts for quick fixes on a moment's notice.

Unfortunately for that theory, it isn't true. There are no resonances of H2, H+, OH-, or H2O near 2.45 GHz. It is just plain old dielectric heating at work here. (The first absorption line for water molecules occurs near 22 GHz.)

Microwave ovens heat any material which has a molecular structure which has a dipolar moment. Many biological molecules do, including all fats. Water also has a slight dipolar moment because of the angle of the hydrogen bonds with the oxygen atom (this is what gives rise to van der Waals forces in water). A dipolar molecule has a net charge separation across the molecule. These two poles can be *torqued* by an electric field. If the field is time varying, IE AC (RF), then the molecules torque back and forth in place. This vibration is sensible *heat*.

Where resonance comes into play is *external* to the material being heated. For maximum efficiency, the varying potential needs to be *large*. That is supplied by the resonant cavity which has resonance nodes which maximize the potential expressed across the food inserted into the cavity, and thus maximize the torque delivered to the dipolar molecules of the material to be heated. (That's why microwave ovens have *hot spots*, which are points equidistant between opposite polarity standing nodes in the cavity. And that's why microwave ovens either have turntables to rotate the food, or a mode stirring device, looks like a slow turning fan, to vary the resonance pattern in the cavity to reduce hot spotting.)

Note also that microwave ovens do not heat from the inside out. They heat to the skin depth of the material being heated. That's a function of material conductance and the frequency used. For deeper heating, lower frequencies are preferred. Large institutional microwave ovens used 915 MHz to allow cooking of thicker food sections, IE whole hams, or whole roasts. The trick of using aluminum foil to reduce heating of thin sections, IE the extremities of fowl, is an application of skin effect.

(Aluminum foil has a very shallow skin depth compared to foods.)

There are industrial dielectric heaters which use even lower frequencies. Plywood is cured using frequencies in the 27 MHz ISM band. That works out nicely since plywood is typically supplied in 8 foot lengths, so the heating cavity works out to be a nice fit. (Before CBers get too excited, these are power oscillators, not amplifiers, so forget about adapting them to CB.)

3717. Sota 100w Amp Schematics?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-27 00:00:00 UTC
From: Richard Innes <rinnes@globalnet.co.uk>
Message-ID: <01bcfb5f$713513a0$125f7ec2@default>
Source record: 185788

I am writing on behalf of GM1 EHK.

We urgently need Scematic or Wiring Diagrams and a setup instructions for tuning For A Sota 100w Linear Amplifier With Preamp and built in PSU. (Uk Mains, Base Unit, Solid State)

All we know is the amp is quite rare and the company was in Liverpool (We Think!)

There is a problem inside the amp and would like to fix it ASAP.

If anyone can help, please contact me and we will arrange either a fax or E-mail attachment.

If anyone knows someone who can repair this in central scotland, we would appreciate any relevant information.

Many Thanks

Famille Brunet sezz:

> My friend challenged me to try find how to build a
> "mix up" for cellular telephone

I'm certainly not advocating this, but:
Such a device can be made by modifying a cell phone's VCO, and adding a microprocessor and PLL control unit. Repetitive bursts of transmit on the cellular base service channels would probably do the trick for analog systems. Digital systems would require similar techniques on other frequencies. Deployment and effectiveness would be at close range to the target.

With the majority of people against Morse Code testing,
It is unlikely that it will last very much longer.

The old guard will eventually die off. Silent Keys really means silent keys.

The only question is: When?

The will of the people is heard eventually. Especially when it is the right thing to do. Many of us CW-lovers welcome abolishment of code requirements. It's the right thing to do now.

Abolishing the Morse requirement is the right thing to do.

Ramsey Electronics sells a Stereo FM Xmtr of 100milliwatts out which
is legal in US and Canada and can cover 300ft easily...
Check with them (I think they have a web page.....use a search engine
to check for it)

3732. A Thanksgiving Day Treat.

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-27 00:00:00 UTC
From: tbryant@SPAMFREEcannet.com
Message-ID: <65ku58$3hl$1@akron5.neo.lrun.com>
Source record: 185803

A simple random sampling of the airwaves can certainly be entertaining.

11/26/97 10:00 pm EST

On 3894.5 there was music being played for about a half hour. Nothing that was really any good either. Mostly religious songs with a southern flair. The unidentified station took a break between songs to apparently listen for reactions, but the regulars had moved.

On 3901, WB2OTK was attempting to have a conversation, but was virtually buried in deliberate jamming. I wouldn't be surprised if it was BARF.

Thanksgiving Day - 10:30 am EST

On 14.313, the Intercontinental Traffic Net was operating. Very little if any QRMing. Turn down to 14.300 and KV4FZ was there, along with the usual gang of idiots. But the individual who caught my attention was an unindentified station trying to engage in a contact with Herb. Judging from his slurred speech, he was obviously drunk. Herb asked for his callsign, and he said "I don't need a callsign. This is radio free America. I admit I don't have a call. You guys all give fake callsigns or use someone elses to get them in trouble."
He went on like this for half an hour or more. The jammers turned their attention from Herb to this unidentified individual.

Pitiful.

Subject record can be viewed at:

http://www.dirtball.com/jimmy.html

The Intercon Net did not make O'brien commit THREE
counts of violation of Georgia Controlled Substance Act,
Georgia code 16-13-3, Ruth Hoffman did not make
O'brien break the law, KK4ME did not make O'brien
break the law, W2ZB did not make O'brien break the
law, W4NTI did not make O'brien break the law, and
certainly AF2Y did not make O'brien violate the
Georgia Controlled Substance Act. AND none of
the preceding were responsible for having
James Vincent O'brien III thrown out of Naval Reserve
Squadron VR46 at the Atlanta Naval Air Station.

WAKE UP O'BRIEN, YOU CHOSE ALL BY YOURSELF
TO VIOLATE THE LAW! QUIT BLAMING IT ON
EVERYONE ELSE!

James Vincent O'brien III, convicted of THREE counts
of violation of the Georgia Controlled Substance Act,
Georgia Code 16-13-30 in the Superior Court of the
County of Paulding in the State of Georgia on
June 16, 1993. Case #93-CR-000158.
Held on $10,000 bond, served six months in
confinement and paroled on Jan. 14, 1994.
Prosecutor for the State: Mike Deaver
Subsequently kicked out of the Navy from Naval
Air Reserve Squadron VR46 at the Atlanta Naval
Air Station in Marietta, Georgia

Hit the road O'brien, you are an ex-con with no
credability. You are pissed at the world, and you want
to take your anger out on everybody. YOU violated
the law, NOT the Intercon net, NOT KK4ME, NOT
W4NTI, and certainly NOT AF2Y.

Hit the road EX-CON!

Hi there,

I have a Ranger Communications RCI-6030 VHF-Marine rig which I want to trade for a scanner. The RCI-6030 has the following features: All USA and International channels (156-162 MHz), all 10 NOAA weather channels, 25 watts output power (full legal power), 1 watt low power, Dual Channel Watch, Instant Channel 16, Digital PLL tuning, backlit LCD display, "water tight" casing, and more. Comes with the microphone (with channel control on mic). Very good condition. This is a current production unit, not discontinued. I am looking for a portable or base/mobile scanner (preferably portable) which covers 800 MHz (not nessesarly gapless 800 MHz), and preferably also the VHF Air Band (118-136 MHz). Any number of channels will do. Anything in good condition will also do. Please email me if you have any offer. I am in the Philadelphia, PA area. Thanks.

73's,
N3ZVM <--------Ham Radio Callsign

Source record: 185857

If it is just for your device, shut it off!
If you are talking about infering with the signal to other peoples cell phones (just because you don't want to hear them ring), then you are in trouble - you would be jamming a legal signal - a violation of law everywhere!
Try instead, asking your local restaurant owner to establish a "Cell Ringer Free" Dinner hour. He could advertise that no cell phones would be permitted that couldn't be set to vibrate only, or that weren't turned off during a certain hour. I'm not sure how he enforces it, except by social pressure or tossing the offender out! (Though I'd suppose people would avoid the place if they are addicted to their ringing cell phone.)
Problem solved, no illegalities involved, cute marketing ploy for the restaurant ... maybe (cell phones are pretty popular and only a few have the vibrator notification feature yet).

I read the above web page. I followed the above links to the BARF home page.
It's amazing how hate groups always like to expound upon the fact that they are
NOT hate groups....but actions speak louder than words.

BARF remained silent when KA4MUJ daily spewed venom over the airwaves.

Yesterday, James O'Brien posted that Rich Whiten was not only a filthmongerer,
but *Jewish* filthmongerer as well...and BARF will remain silent.

>>where to start looking for this type of information. Any help would be
>>appreciated.
>>
>>HRS.

In an older book from Radio Shack, there is a schematic for a 2N2222 single
transistor transmitter. The book (small Mimi-notebook) is the Engineer's
Mini-Notebook by Forrest M. Mims III. It cost $1.49 way back when. If you can't
find it, I can hand draw you a schematic and send it to you. It uses a very
small
1 1/2 volt battery and "was"suppose to be the smallest transmitter in the
world. It draws only 100 uma.

Bob

3756. *TRADE: VHF Marine for SCANNER*

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-27 00:00:00 UTC
From: hamuser@aol.com
Message-ID: <19971127041301.XAA07970@ladder02.news.aol.com>

I am looking to trade my Ranger RCI-6030 VHF Marine radio for a scanner. The RCI-6030 has the following features: All USA and International Marine and NOAA weather channels, full 25 watts legal output power, Dual Channel Watch, Backlit LCD Display, and more. Current production model. Good condition with microphone. Water tight case. Looking for a portable or base/mobile (prefferably portable) with some 800 MHz coverage and preferably VHF Air Band too. Any number of channels is fine, but must be in decent condition. If you have any offers, please email me. Thanks. I am in the Philadelphia, PA area.

masa where do you get this nonsense?
By the way did you ever correct those ficticious hf bands on your web page?

"Any person may participate in the operation of an amateur station under the supervision and in the presence of a holder of a certificate of license."

I have, and have seen others allow all sorts of unlicensed people use ham stations to communicate. JOTA and Santa operations for the two most obvious.

>73
>Zack Schindler
>N8FNR

Hi Zack,

25 April 1874: Marconi is born in Italy.

Fall of 1894: Commences wireless experiments.

Summer of 1895: Able to send signals about one mile.

February 1896: Arrives in London having left Italy.

5 March 1896: First patent application at the Paten Office - entered
in the Official Journal as No. 5028, with the title "Improvements in
Telegraphy and in apparatus therefor."

20 May 1896: Sends letter to British Secretary of State for War Affairs
offering to demonstrate a wireless device that will guide boat or
torpedo "without any person being on board" (very interesting letter!
I'll post it seperately from this article).

2 June 1896: Second patent application, No. 12,039/1896; it's the
first relating to wireless telegraphy ever granted.

September 1896: Lavernock trials on Salisbury Plain - demonstrates
that his system of signalling by the use of Hertzian waves has some
potential value; during these trials the British Post Office
becomes seriously interested.

Early 1897: Moves from St. Stephen's Square to Westbourne Park.

March 1897: Lavernock trials continue; Post Office decides to
institute a series of official trials to ascertain the practical
value of his methods.

May 1897: Trials held between Lavernock Point and the island of
Flat Holme in the Bristol Channel, a distance of about 3.3 miles;
(tests were successful but could have been exceptional if only the
transmitter end and the receiving end were on the same freq'y:
The Righi oscillator operated somewhere between 500 to 800 MHz, while
the receiver possessed a resonant freq'y around 2-3 MHz).

29 May 1897: Lavernock/Bristol Channel experiments come to a close.

April 1897: Marconi registers the Wireless Telegraph and Signal Company - this causes the Post Office to break off all collaborations with him.

Fall of 1899: Marconi achieving ranges of about 60 miles, so Post Office begins to court him again.

October 1899 to April 1900: Experimental transmissions carried on between Lavernock and Weston through much improved circuitry; regular and fairly easy communication has finally become possible.

Marconi goes on to become a ruthless businessman, placing a strangle-hold on maritime communications; he instructs his workers not to communicate with operators of other companies; his operators are ordered to jam transmissions of non-Marconi companies. This "non-intercommunication" policy becomes a topic of discussion at several international radio conferences (1903 and 1906), but it finally takes the Titanic disaster to convince the participating nations of the 1912 London Conference to force Marconi to comply with "intercommunication regardless of apparatus in use."

That's all I can think of for now. I'll continue this later.

> against strong interference like nearby dimmers and computers.

I don't believe that the insertion loss of the ANC-4 will be material
unless the levels of the wanted signals are so low that they approach
the levels of the noise generated in the ANC-4 or after it in the
receiver. That seems unlikely on HF.

> I have S1 power line, dimmer, and computer noise at my location, the ANC-4
> doesn't help me copy weak CW signals better, but it does improve
> listenability. It might be more useful on weak AM and SSB signals, when
> I use a wider bandwidth.

The ANC-4 and similar units will be ineffective when you have more
than one source of problem noise, since they can only be adjusted to
null just one. And at that adjustment the unit may even be adding to
the other noise sources which are also entering through the noise
antenna, so things may be made even worse.

I tried the ANC-4 and found it useful many times. But the biggest
problem I had was to find a good enough noise antenna. The internal
whip and even small room wires never provided me with enough noise.
Maybe the unit needs more noise amplifier gain.

Regards,

>Bryce, K1GAX (ex AL7DL)

In Canada, if someone wants operate the amateur station, BASIC
qualification or equivalent must be OBTAINED. It's clear in the
regulation. Under the supervision, the BASIC or equivalent
operators can operate under the supervisor's limit (ie.
supervisor has morse (HF) = no code operator can use HF under the
supervision).

In JAPAN, you are required to get A CERTIFICATE for your station
equipment. CALLSIGNS ONLY will NOT permit you to use the station;
the station equipments must be registered.

In Canada & US, once you obtain the station license or call sign (NOT
station equipment license), you are free to choose the rig that you
wanna use.

I know what I am talking about. Please don't make me stupid.

My web page correct states "STATION EQUIPMENT" license, not the
STATION license.

It does not matter if you are pro or con on the HF no-code access issue. WRC closed and not only did not look at the issue, but removed it from the WRC '99 agends. Its tentative for WRC 2001, but the reality is that it may be 2030 or even later before the issue is addressed -- if ever. The reason: WRC does not think ham radio issues are important enough to bother wasting monetary resources (read that as operating $$$$) on to discuss.

The good news is that all you "pro" and "anti" no-code debaters can now find another topic to moan about. The Morse code issue is now -- as far as the worlds communications regulators are concerned -- a totally dead issue. An they -- not you -- not the ARRL -- not the FCC -- make the decision.

Archeologists don't know the name of the artificer, but they date the earliest known electric motor at around 3,000 BC, the location was in central Mesopotamia (modern day Iraq). It is a squirrel cage design using gold plated copper bars for the armature, running on sappire bearings.

Several batteries were also found at the site (housed in earthenware casings), but no trace of an inverter was found. It is not known how the AC was produced to operate the motor, or even if the batteries were involved in its operation.

Also found at the site were several gold plated engraved lead discs. It is fairly obvious that the batteries were used for this electroplating work. The artificer is assumed to have been a counterfeiter of some skill. The contemporaneous police might have had a name and description of the fellow, but those records are probably lost for good.

In the Western world, Michael Faraday in England and Joseph Henry in the US are credited with independently rediscovering the principles of the electric motor in 1831. A mere four years later, in 1835, the first electric train went into operation in Brandon Vermont (built by Thomas Davenport). AC motors didn't come back until Tesla reinvented them.

You remind me of some scanner folks who, upon hearing about a TC with
injuries, rush to the scene and gawk.

75/80m is 500 kHz wide. Why focus on a single freq'y, when there are
hundreds of other QSOs taking place up and down the band? Why focus on
a dozen or so lawbreakers when the rest of the 99.999999% of the
amateur community consists of law abiding ladies and gentlemen?
Why easdrop on SSB when you could be monitoring RTTY, CW, ATV, AM,
and the digital modes? In fact, why not study and earn a license so
you can join us on the air, rather than being just a peeping Tom?

>But, unlsess it's changed, in the US I thought you passed a test
>and then received a license which carried your callsign. If you didn't
>renew, you had to take the test again?

In the US you are issued two licenses, an operator's license (97.9)
which states your *class* of license, and a station license (97.5) which
states your primary station *call sign* (stations have call signs, operators
don't). These are separate authorizations, but they are printed on
different sections of a single form (form 660), so many amateurs think
that it is a single authorization, it isn't. (At various times in the history
of US licensing, it has been possible for a single operator to concurrently
hold several station licenses, and have several different station call
signs, though of course he holds only a single operator's license.)

Both authorizations must be renewed at ten year intervals (it used to
be five year intervals). Currently, there is no fee for renewals, but at
one time there was. It used to be that if you let your station license
lapse for more than one year, you'd be assigned a new station call
sign. That's been extended to two years now. If you let your operator's
license lapse for more than two years, you have to retest. Note, you
can't operate while your license is lapsed *unless* you've filed a
timely renewal (filed within 90 days *before* the license expires)
and the FCC hasn't yet returned your new licenses.

actually it runs about 22 milliwatts with the high power strap. If you mean the FM25. If you look at the FM10 its more like 10 milliwatts. None of the above are legal in the US with a good antenna! Its not output power but field strength. I run an FM25 into a 1/2 watt amp and feed a radioshack dummy load. I get a good pattern and am very legal. On the other hand run 10 milliwatts into a nice groundplane and you'll be outside the rules....73's

Yes yes, we've all read of the archeologists' speculations, but quoting
them won't win you the HT; we need a name and a date - "at around" is
too vague.

>In the Western world, Michael Faraday in England and Joseph Henry in

Correct name, but incorrect date. Return to your references, and this
time focus on Faraday's earlier experiments, especially around the time
he's replicating Oersted's discovery of the reaction between a current-
carrying wire and a magnetic needle.

I love CW, but have to agree with you there. Of course, it might not be during *this* solar cycle. Sure seems like a shame to sit and watch life go by waiting for HF privileges that are easily within the grasp of anyone who has the discipline to study for a few weeks. But then again, maybe on the *next* solar cycle.

> only language I speak is English.

Although I eventually took out a licence, I'm still primarily an SWL by inclination. I started listening in the early 60's and had a break in the 1970's when I was bitten with the hifi designing bug (but I recovered). I agree that much of the activity on the bands is now non-radio-related natter. Interests seem to have changed over the years. I suspect that one of the major causes may be the availability of affordable store-bought radios.

> Just listen on the 3.5 Meg area. What do you hear. Badly netted
> circuits just chatting.

There is no excuse for bad operation, though the "big 3" in Japan turn out radios without any of the basic netting aids at all, but with zillions of memories and scanning modes.

> As for the licence system I unfortunately believe that you should be
> licenced for SSB, with seperate examinations for CW, Data Modes and
> Digital transmissions. That way perhaps people might take more care when
> transmitting, and they at least now the effects upon other users of the
> Radio spectrum.

Governments created the requirement for licences, and they did it for their own good, not ours. Their purpose is to prevent amateurs causing problems for other users. Once someone is proven to have reached a level where enough is known to be trustable to take sensible precautions to avoid problems, then the purpose of licensing is met. Building up skills in specific modes, becoming knowledgeable about antennae, circuitry and whatever will increase the success and enjoyment that can be achieved, and form its own incentive. This process is self-adjusting and self regulating.

> I would also suggest that assigned bands to modes become mandatory.
> Just my thoughts as an SWL who listens.

That could be even worse than what we have now, if mandatory bandplans were not identical around the world. Think of the 40m band as it now is between UK and US allocations!

Cheers

Hi folks .
I am running the bmk software under dos as it wont work with the
dosemu in Linux.I would prefer to tx/rx amtor pactor rtty and cw with linux
proggys or last resort is there a way of getting dosemu to work seems
that under dosemu all timings are wrong and only the cw part will work at
speeds of 10 words a min or less.Has any one written proggies yet or got
dosemu to do the bizz on the bmk software ??
Thanks in advance for all help and suggestion you may have

A Ham's Night Before Christmas

(Yet another corruption of Clement Clarke Moore's
classic Christmas tale, this time distorted by
Gary Pearce KN4AQ, and the Raleigh Amateur
Radio Society, Raleigh, NC, December 2, 1996.)

Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -
A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I though for a moment,
That it might be Wayne Green.

But no, it was Santa
The Santa of Hams.
On a mission, this Christmas
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV,
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box,
"A new rig?" I thought!

"A new Kenwood? An Icom?
A Yaesu, for me?!"
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent,
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

They wont need Morse anyway, after the commercial folks eventually
get the bandwidth after everyone starts dying off.

All of you might be interested to know that the BARF web page has a picture of German composer Richard Wagner, with the caption "The greatest composer of opera".

You might also be interested in the fact that much of Hitler's anti-semetic ideals came from Wagner's work. The Nazis idolized Wagner.

Coincidence?

I disagree with your assesment that morse code is not welcome among amateurs
who have earned the right to use it and the expanded privleges that come with
it.

Furthermore WARC has made the decision that the no-code issue is for now
not on the agenda and in all likelyhood won't be removed in the next meeting.

Morse code is a great part of the hobby, and is still as useful today as it was
60 years ago.

Okay, this one should be *real* easy to answer (since I posted the answer a year or two ago). The winner gets a free ($3 for shipping, though) antique Motorola HT (probably 25-30 years old) crystalled on 154 MHz:

Tell us the exact date that Class B emissions ("spark") were finally prohibited, and at which international radio conference this action was decided.

I've got lots of stuff to give away, so expect more of these quizzes. Hit the history books, guys (and gals)!

> 60 years ago.

This is true, IMO, recreationally speaking. IMO, use *now* of
Morse code for anything but recreational communication is highly
unlikely, as it is well-known and documented that CW Morse is no
longer the primary mode it was pre-WWII/pre-voice modes. (This point
has also been and continues to be debated, and probably will continue
to be so debated -- even after the removal of the Morse code TESTING.)

Well reading a poston this I thought I would throw in my problem for responses. I have a GE UHF mastr II repeator and the original GE power supply has a hum/buzz whatever. This is with all connections disconnected. So no rf power is getting back nor any load on it and it has a hum, with all connected and keying down 100 watts out it just changes pitch a little. Problem is the some of this hum is getting into the transmitter's output and causing a undesired sound, not real bad but I would like to eliminate it.

Caps, regulator, transformer windings, etc.???

Some tips on trouble shooting this is what I am after.

Sam

DIVISIONAL NEWS

1998 CALL BOOK OUT NOW

The 1998 Australian Radiocommunications Reference Guide and
Callbook is now in stock. The price is $15 for non-members, $13 to
members. If you would like it posted to you, please add $2.50 for postage
& handling.

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta
on Sunday 7th December 1997. Candidates who have lodged
applications are requested to report at 12 noon, and the exams will start
as soon after that time as possible, but no later than 12.30 pm.

-- submitted by Eric Fossey VK2EFY - Divisional Secretary

ATTENTION BROADCAST TEAM

The broadcast roster for the period January to March 1998 will be drawn
up soon, so please notify the Divisional office of any dates that you are
likely to be unavailable.

WICEN NEWS

This holiday season is shaping up to be one of the hottest on record, and
there is every indication that WICEN will be activated to assist with
bushfires (although our Dural command post is not expected to be
destroyed, as it was a few years ago, by certain people). Please keep
your batteries charged and your equipment in full working order, ready
for that sudden activation. How are the gas bottles for your camping
stove? Do you have "long life" food and water ready to hand? What
about that dodgy microphone connector you've been meaning to fix for
ages? Are you ready?

There are some new events upon the WICEN calendar. Next Sunday is the famous Hunter region Christmas BBQ, with the indomitable Pauline VK2GTB in charge. Following the recent Forster Half-Triathlon, the full Forster Triathlon, run by Steve VK2KXQ, will be held on 5th April next year.

Events next month include the aforesaid Hunter region Christmas BBQ, next Sunday, and the Management Committee meeting, to be held in conjunction with a BBQ, on 13th December.

A reminder for events next year include the Bushwalkers Rogain, run by Alan VK2YYJ, on the weekend of 27-28th June, and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November. WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

WRC-97 FINISHES IN GENEVA

The 1997 World Radiocommunication Conference concluded its talks in the early morning hours of November 21 in Geneva, Switzerland.

Amateur Radio survived WRC-97 largely unscathed, but the stage has been set for renewed spectrum battles at WRC-99.

The Little LEOs (non-voice, non-geostationary mobile satellite interests)--which put a huge scare into the ham radio community in 1996 with their proposals to share ham radio VHF and UHF bands--were unable to muster much support for new allocations at WRC-97. However, they came away with up to 3 MHz of additional spectrum on a regional basis, in the bands between 454 and 460 MHz. The Little LEOs also got a resolution calling for urgent studies in preparation for WRC-99--what some at the conference called ''a hunting license'' for additional VHF/UHF spectrum. A second issue that will recur at WRC-99 is finding a place in the 420-470 MHz frequency range for the Earth Exploration Satellite Service (EESS). Synthetic aperture radars (SARs) using frequencies in

this range are said to be capable of penetrating the rain forest for mapping purposes.

Two significant ham radio-related issues failed to make the cut for consideration at WRC-99. For budgetary reasons, the WRC-97 delegates had to limit the WRC-99 agenda only to the most urgent issues. Pushed back to the tentative agenda for WRC-2001 were the possible realignment of the 40 meter band to resolve a conflict between hams and broadcasters in part of the band (along with possible expansion of broadcasting bands between 4 and 10 MHz), and Article S25 of the international radio regulations. Article S25 contains the international regulations specific to the Amateur and Amateur-Satellite Services, including the Morse code requirement for operation below 30 MHz.

WRC-97 delegates approved a resolution encouraging administrations to facilitate the use of ham radio and other ''decentralized means of communications'' for disaster mitigation and relief operations. This resolution eliminated the need for Resolution 640, which defined how certain ham bands could be used for international disaster communications by non-amateur stations, so Resolution 640 was suppressed.

WRC-97 delegates did agree to upgrade the Earth Exploration Satellite Service from secondary to primary at 1215 to 1300 MHz, which should have only minimal impact on amateur use of 1240-1300 MHz. The presence of EESS there also reduces the possibility that other, less-compatible services might later be introduced into this band.

In other allocations decisions, amateur satellite segments were not included among allocations for wind profiler radars. Except for a worldwide primary allocation at 1270 to 1295 MHz, the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis. Region 2 administrations were urged to implement wind profilers in radiolocation bands at 440 to 450 MHz, 904 to 928 MHz (protecting the lower, weak-signal segment), 1270 to 1295 MHz (protecting amateur satellite and weak-signal), and 1300 to 1375 MHz.

The delegates agreed that the bands 420 to 435 MHz or 438 to 440 MHz could be considered for use in situations where there was incompatibility between wind profiler radars and other radio applications at 440 to 450 MHz or 470 to 494 MHz (only in some Region 1 countries). In this case, too, the amateur-satellite segment is protected.

Several Region 1 (primarily European) countries deleted footnoted exceptions to the international table of allocations in the 1810 to 1830 kHz range, expanding the usability of 160 meters for ham radio. North Korea was persuaded to drop its bid for footnoted exceptions to the allocations table that could have affected some ham radio bands in that part of the world.

--ARRL Bulletin 72, dated 21st November, 1997

DX REPORT

VIETNAM - Look for F6BFH and his team operating as XV8FP until November 30. They must work on either 7063, 14263 or 21263 kHz in CW or SSB only.

JAMAICA - The multinational team of 6Y4A are a Multi/Multi entry in this weekend's CQ WW CW Contest. They are operating as homecalls/6Y5 before and after the contest.

BURUNDI - Alfredo, 9U5CW, Alex, PA3DZN, and Jean Pierre, 9U5DX, will be active as 9U5CW in the CQ WW CW Contest on all bands.

MOZAMBIQUE - Look for C91JM from the US Embassy using CW and SSB on all HF bands.

ST. PIERRE AND MIQUELON - Rick, N1RL, with W8MV and WZ8A plan to be active as FP/W8MV during the ARRL 160 meter contest December 5 to 7. They will also operate FP/homecalls as conditions permit.

PANAMA - Stefan, DL5XX, Swen, DL2BAY, and Jelka, S57NW, will be active as 3E1DX until December 7 from Contadora Island. This includes being a Multi/Single entry in the contest today.

THAILAND - Look for HS0AC, HS5AC, E22AAA and possibly other HS stations on 160 and 80 meters during the CQ WW CW Contest.

GUAM - Members of the Guam Contest Club are active as AH2R as a Multi/Single entry in the CQ WW CW Contest.

AUSTRIA - Look for OE2VEL operating as OE2S in the CQ WW CW Contest in the QRP class.

ICELAND - Tim, N4GN, will be active as TF/OH4GN before and after the contest. QSL via N4GN.

IVORY COAST - Claude, TU2XP, with F5EQ, F5ECX, and F3KT will be active at his QTH until December 4. They are active in the CQ WW CW Contest as TU3F as well.

VENEZUELA - Paolo, YV1FIG, is active as YX1D during the contest. His operations are generally on 80 meters.

SOUTHERN COOK ISLANDS - ZK1DI has been on air most days between 0530 and 0800z on 80, 40 and 30 meters using mainly CW.

--ARRL DX Bulletin 50, dated 26 November, 1997

THE IRISH HOUR

[Divisional Broadcast Officer, Richard VK2SKY - formerly EI6BTB - begs your indulgence for this item from the Irish Radio Transmitters Society newsletter of 23rd November:]

Both Joe W2ORA and Don WA2DUE have been in touch asking that EI operators be reminded that the Irish Hour on Sundays at 1700 UTC on 21.317 MHZ is alive and well.

While it has been in use for 10 years, the last two years were not very productive across the Atlantic.

On last Sunday week, November the 9th, there were 8 stations checked in, including EI7BA and EI4GO.

It is predicted that each week should get better as we get into the [northern] Winter season.

CLUB NEWS

RADIO AMATEURS OLD TIMERS CLUB

MEMBERS AND FRIENDS OF THE RADIO AMATEURS OLD TIMERS CLUB ARE REMINDED THAT THE NEXT SERIES OF BROADCASTS AND CALL BACKS WILL TAKE PLACE ON MONDAY 1 DECEMBER.

We have a broadcast of news and information on the first Monday of each month except January using the special call sign of VK3OTN. They are as follows:

10am - Melbourne time all year i.e. both E.A.S.T. and D.S.T.
145.700 mHz FM. 7.060 mHz.SSB 3.650 mHz.SSB.
0100 hours U.T.C. all year 14.150 mHz.SSB beaming North.
0200 hours U.T.C. all year 14.150 mHz.SSB beaming West.
8.30pm - Melbourne time all year 3.650 mHz.SSB.

Call backs follow each transmission.

NEWS FOR INCLUSION IN THE CLUB BROADCASTS WILL BE WELCOMED BY CLUB SECRETARY ARTHUR EVANS VK3VQ OR ALLAN DOBLE VK3AMD BOTH OF WHO ARE OK IN ANY CALL BOOK.

-- ARTHUR EVANS VK3VQ

THE AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

The Association will hold their Christmas Party, in conjunction with the WIA Christmas Party ($12.00 per head), on Saturday the 13th December 1997, at Jo's QTH.

59 Westbrook Avenue
Wahroonga.

(So come along and meet some of the people you converse with.)

If you would like to know more about the Association feel free to contact the Secretary by phone on 02 9489 4393 once more 02 9489 4393 or write to the:-

Australian Amateur Packet Radio Association
59 Westbrook Avenue
Wahroonga NSW 2076
